

How does your childhood compare to the climate of today?

Bengaluru got hotter while you grew up.

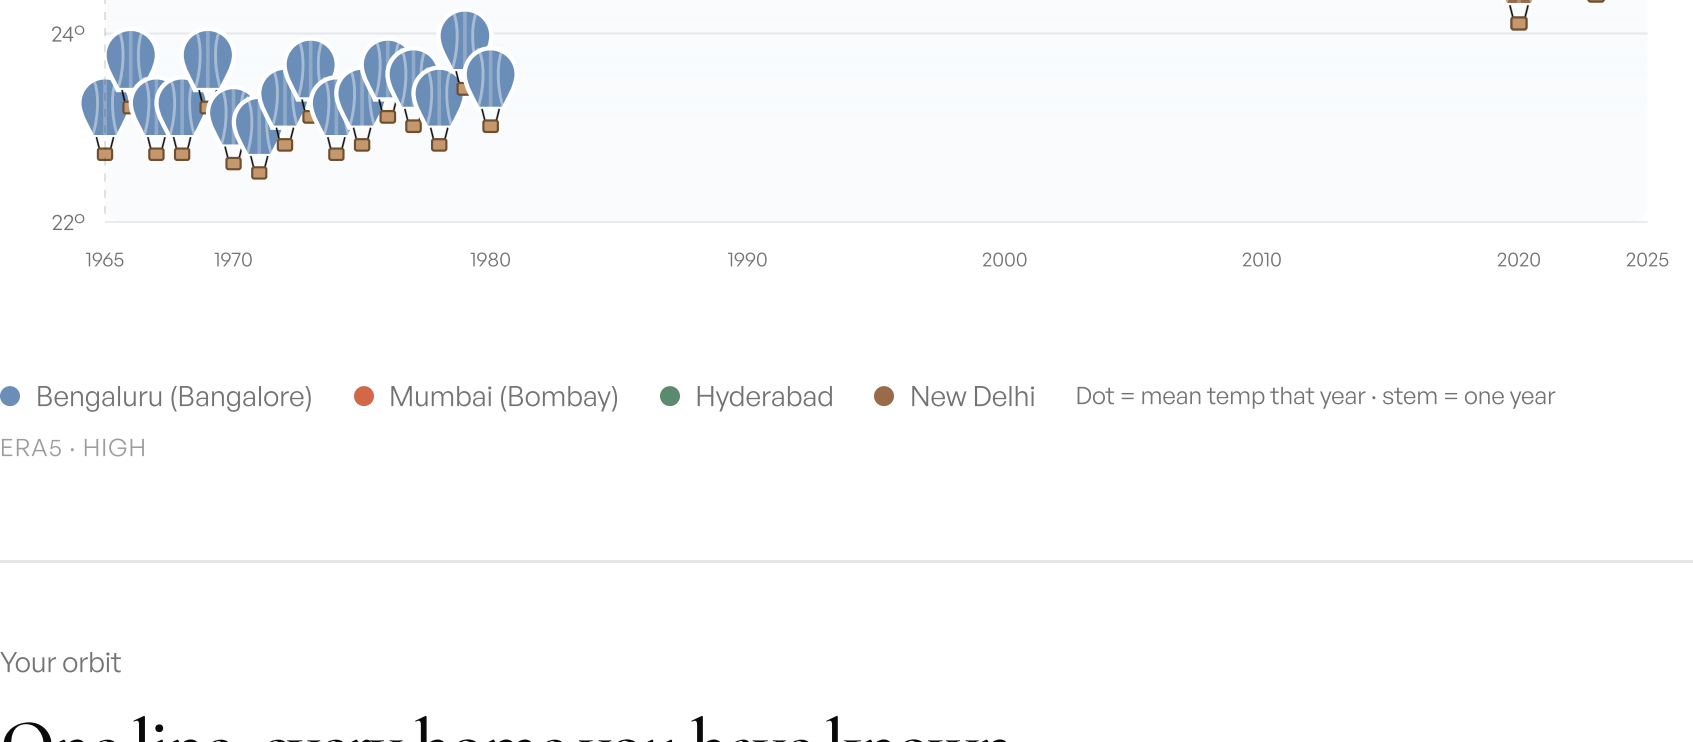

An average December is now 1.4°C warmer than during 1963–1967.

Your climate trail

The air got warmer year by year.

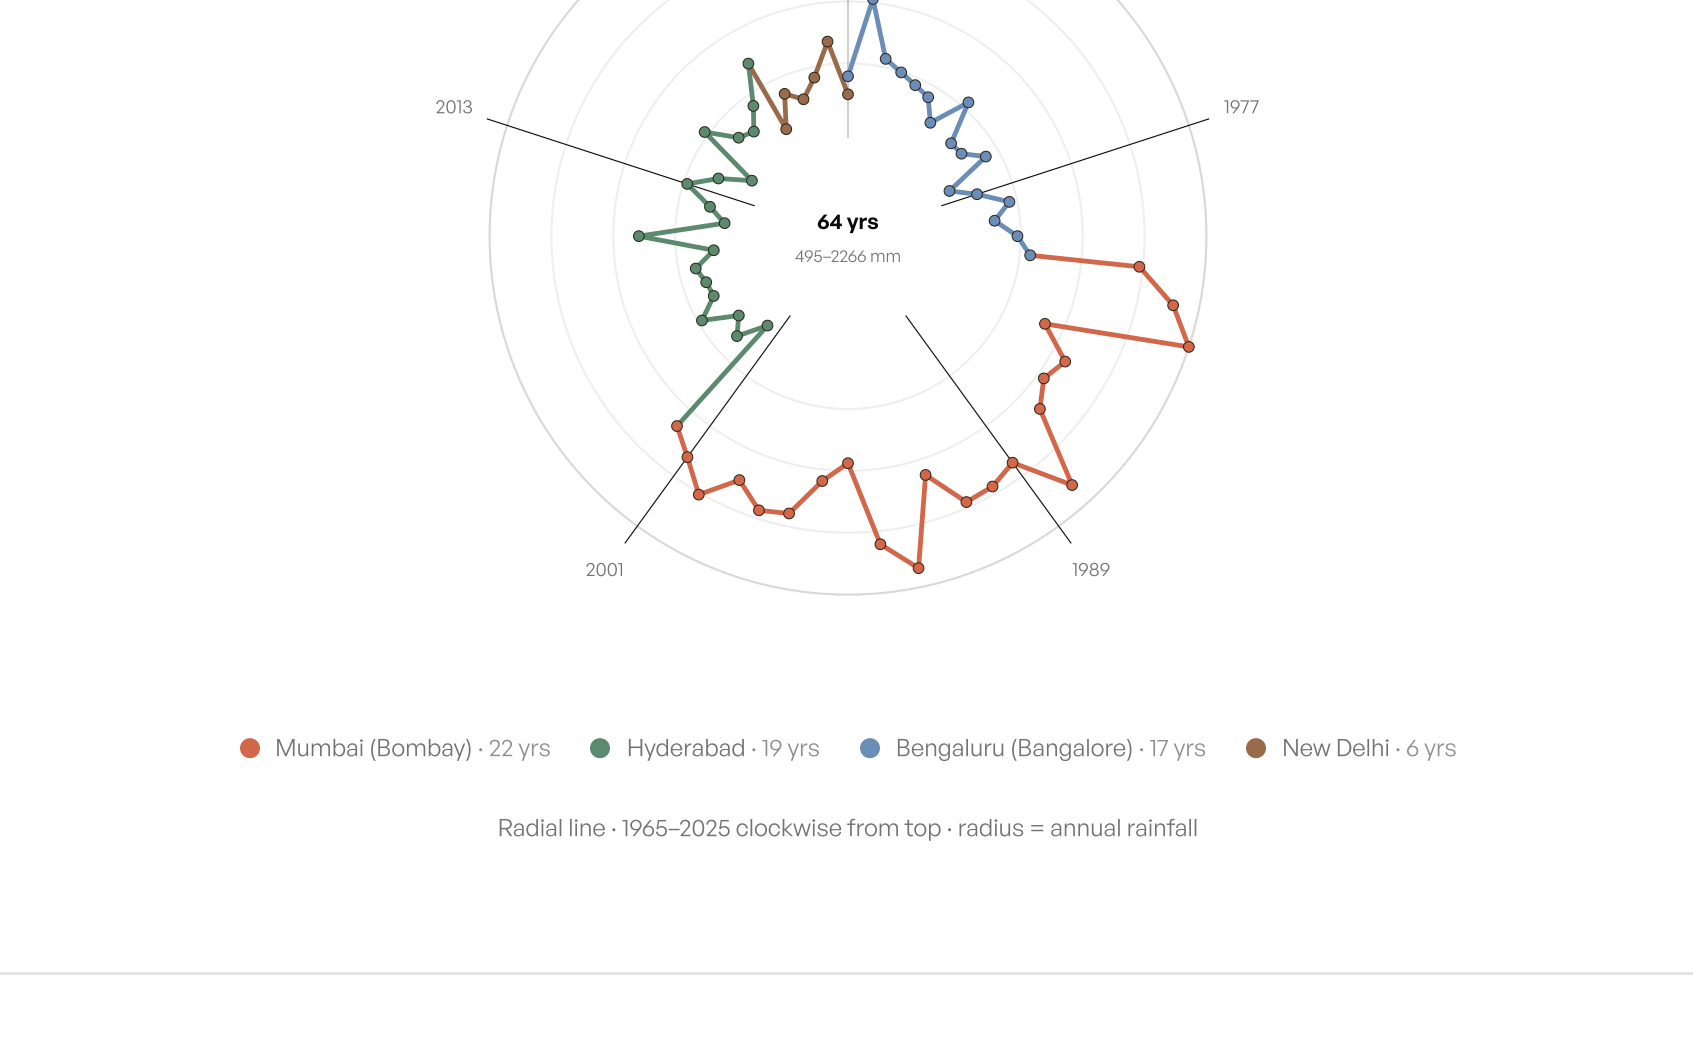

Across 61 years in 4 cities, annual mean temperature rose 2.6°C from 1965 to 2025 — your warmest year so far was 1987.

Your orbit

One line, every home you have known.

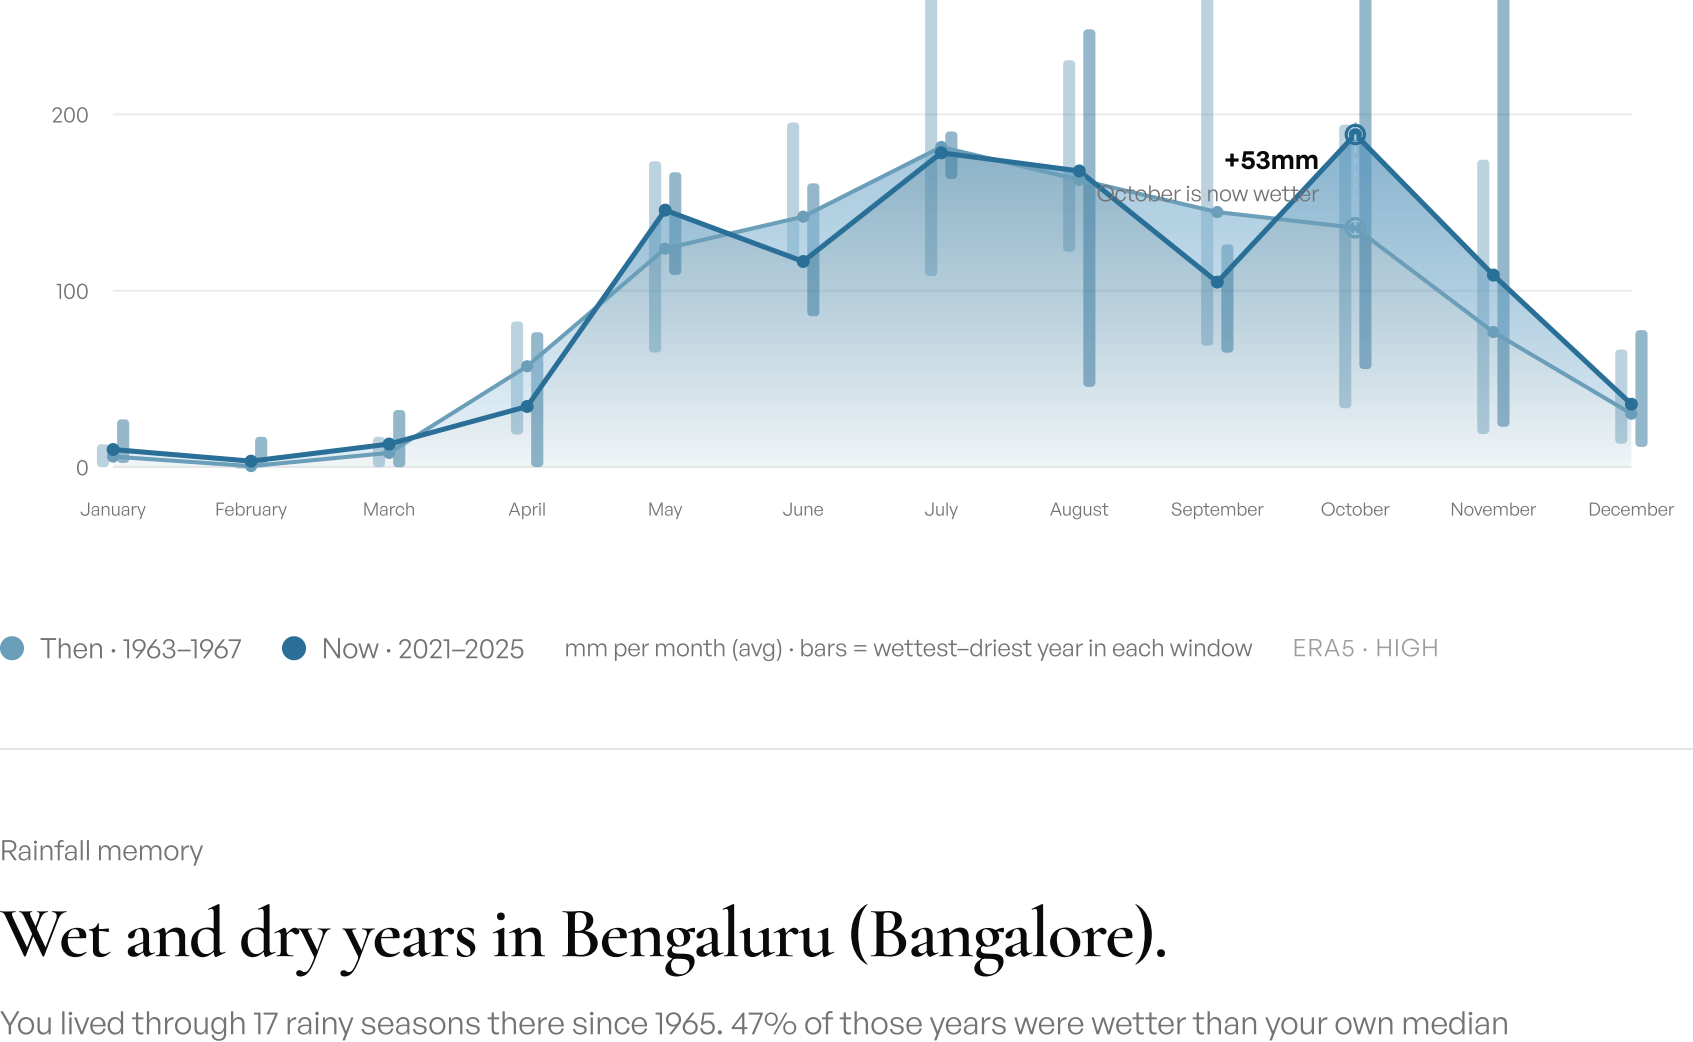

Years stitched clockwise from birth. Wettest: 1983 in Mumbai (Bombay) (2,266 mm). Driest: 2015 (495 mm).

Rain

Your monsoon rhythm shifted.

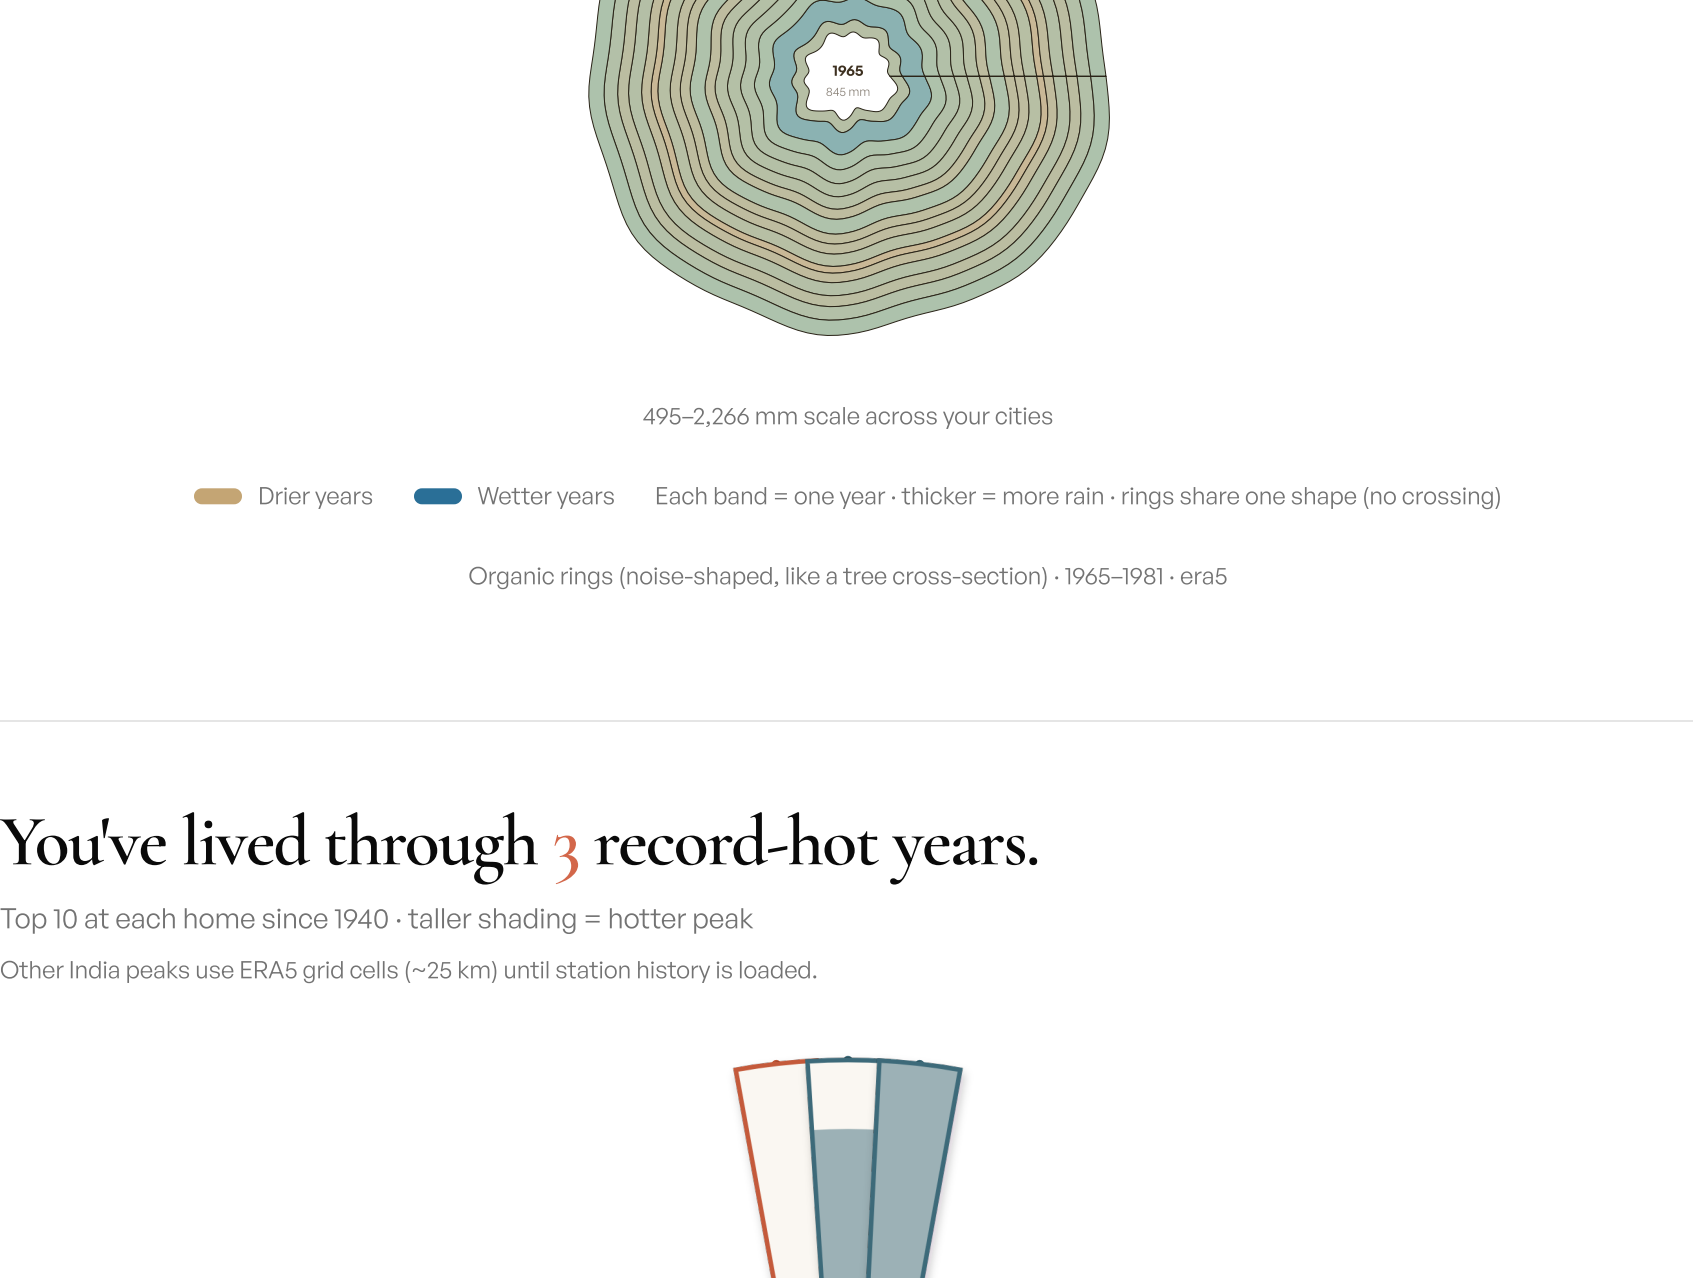

June–September rainfall at Bengaluru is about 10% drier now than during 1963–1967.

Rainfall memory

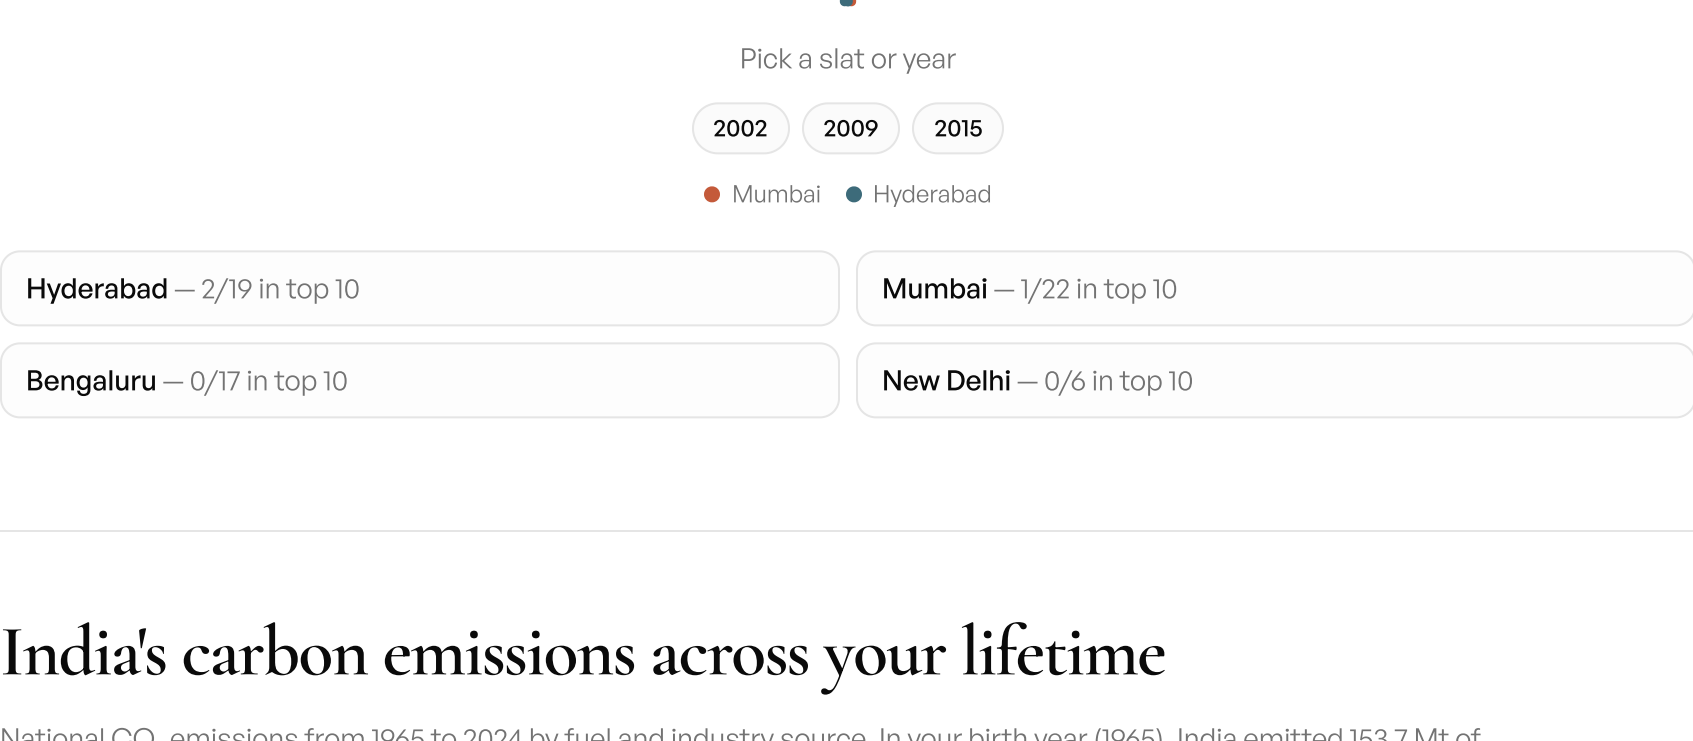

Wet and dry years in Bengaluru (Bangalore).

You lived through 17 rainy seasons there since 1965. 47% of those years were wetter than your own median — your soggiest was 1966 (1,408 mm), your driest 1976.

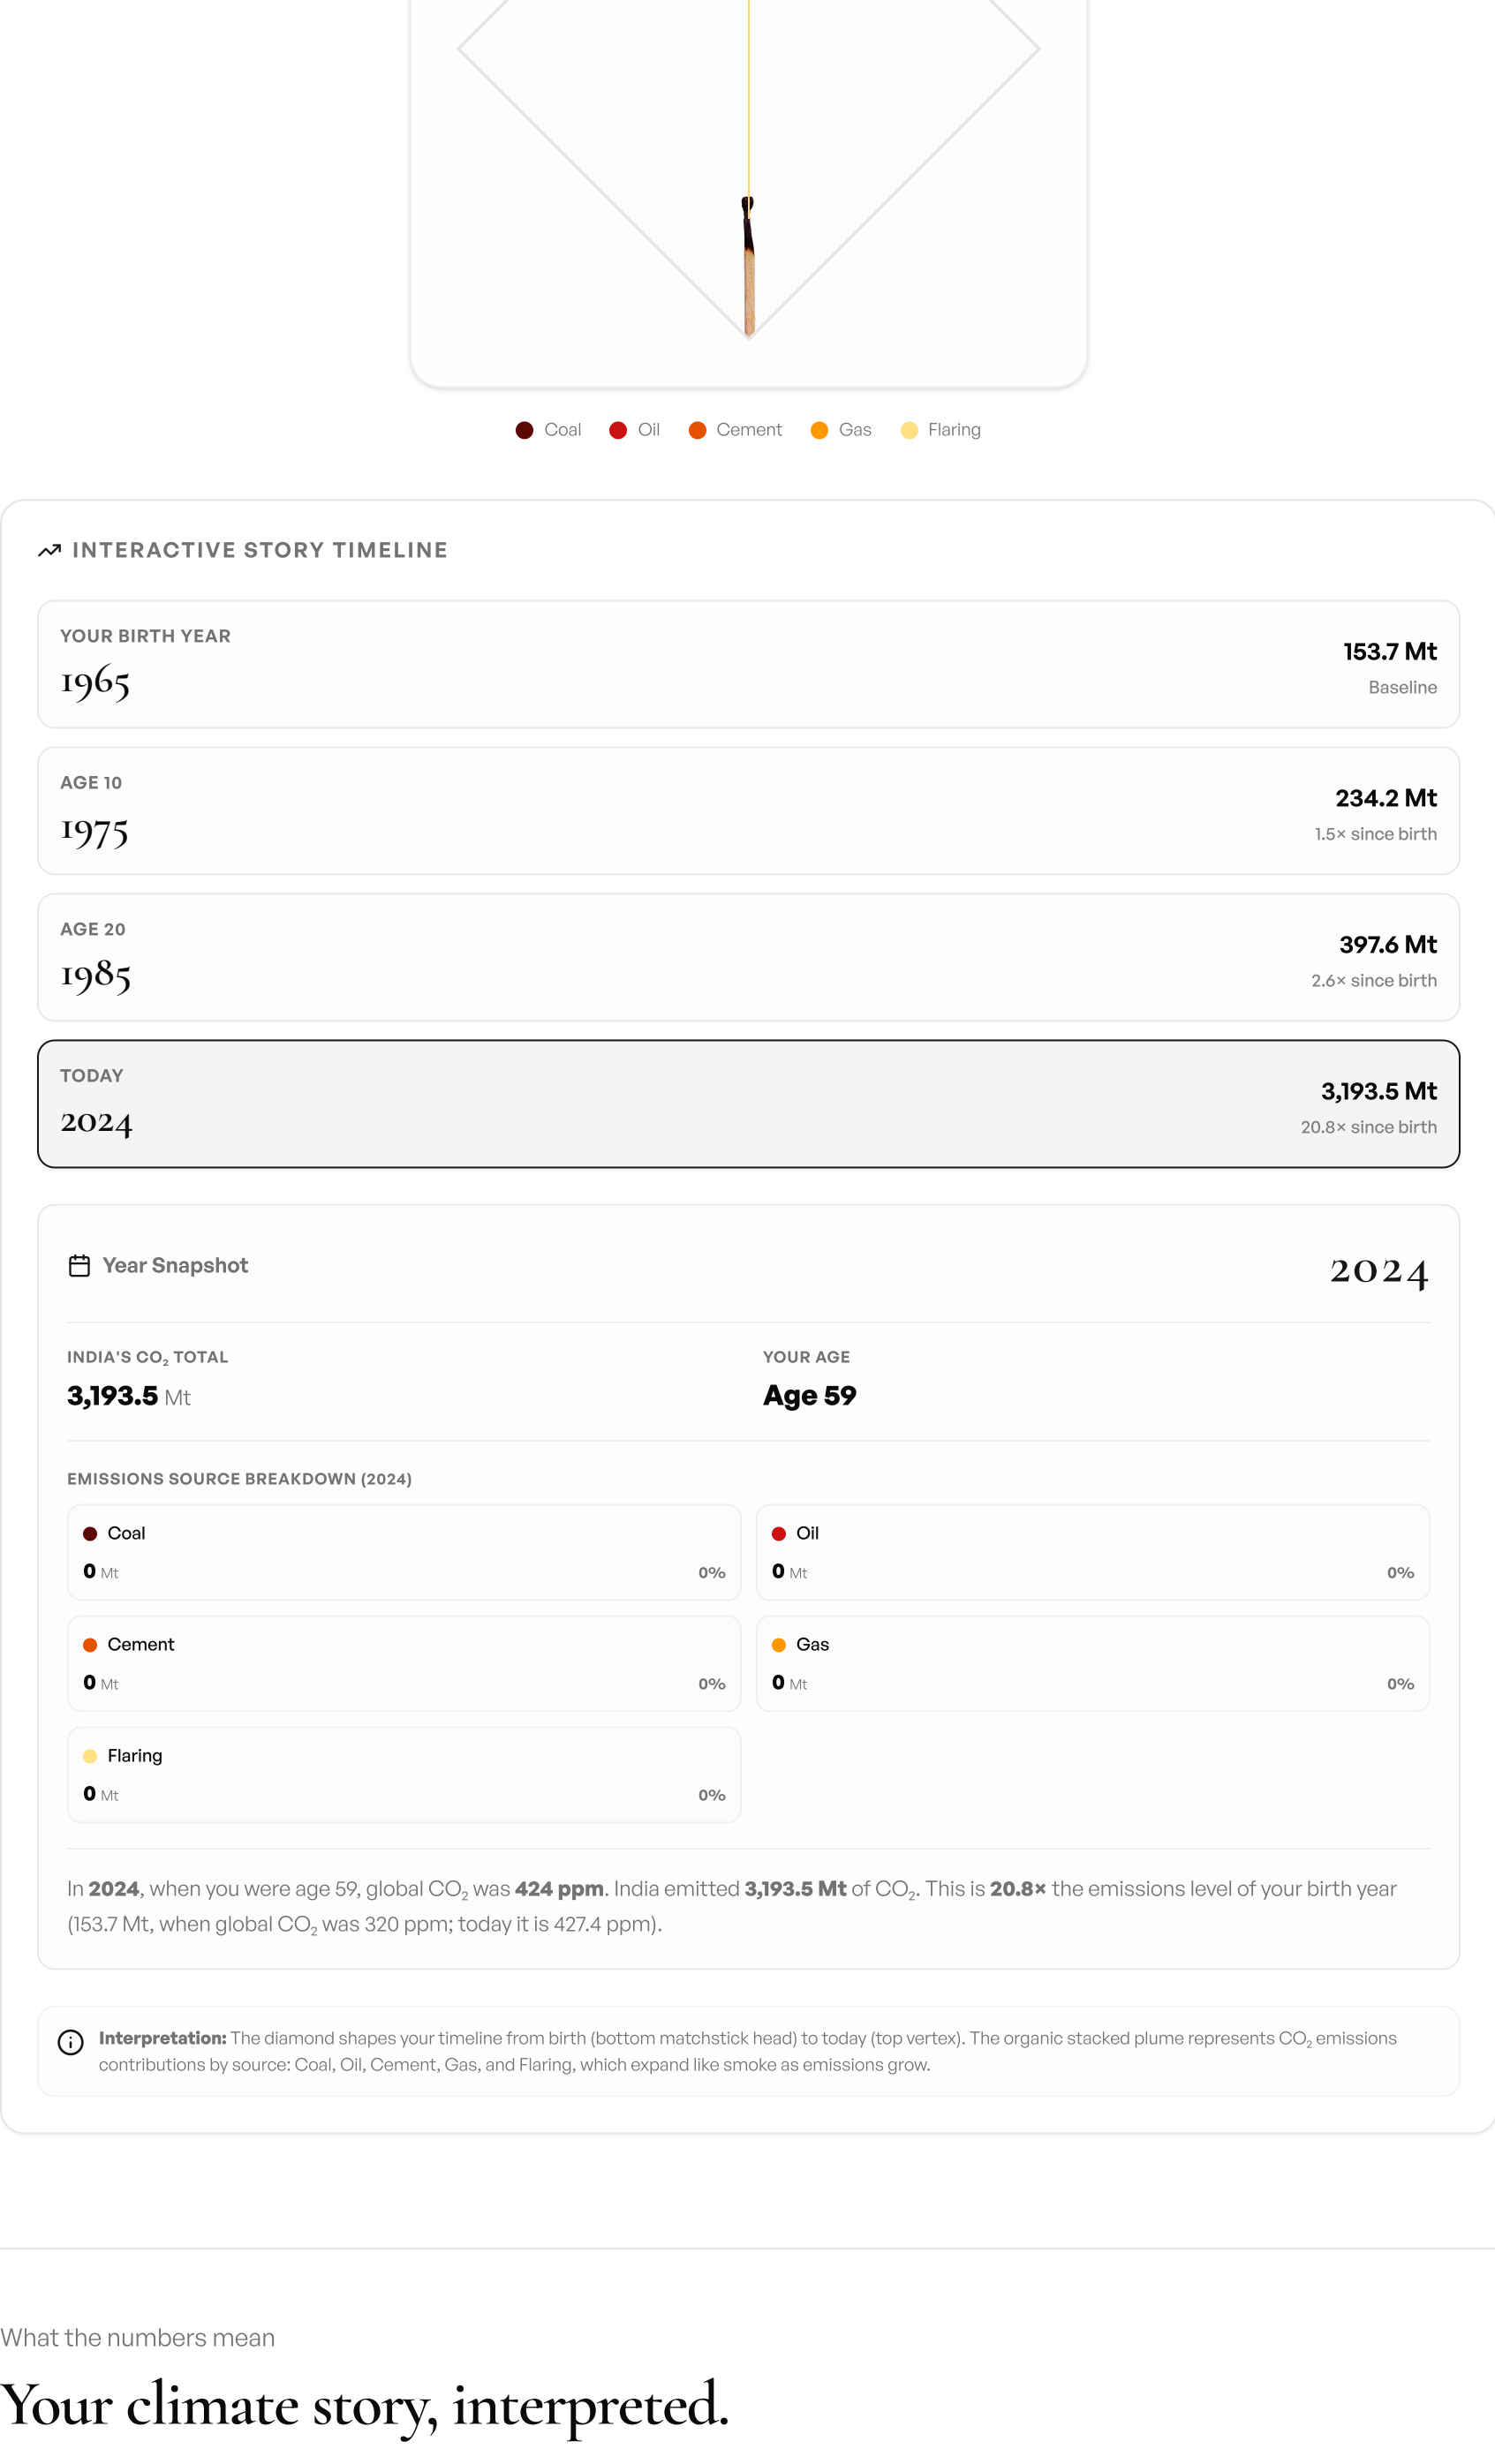

You've lived through 3 record-hot years.

Top 10 at each home since 1940 - taller shading = hotter peak
Other India peaks use ERA5 grid cells (~25 km) until station history is loaded.

India's carbon emissions across your lifetime

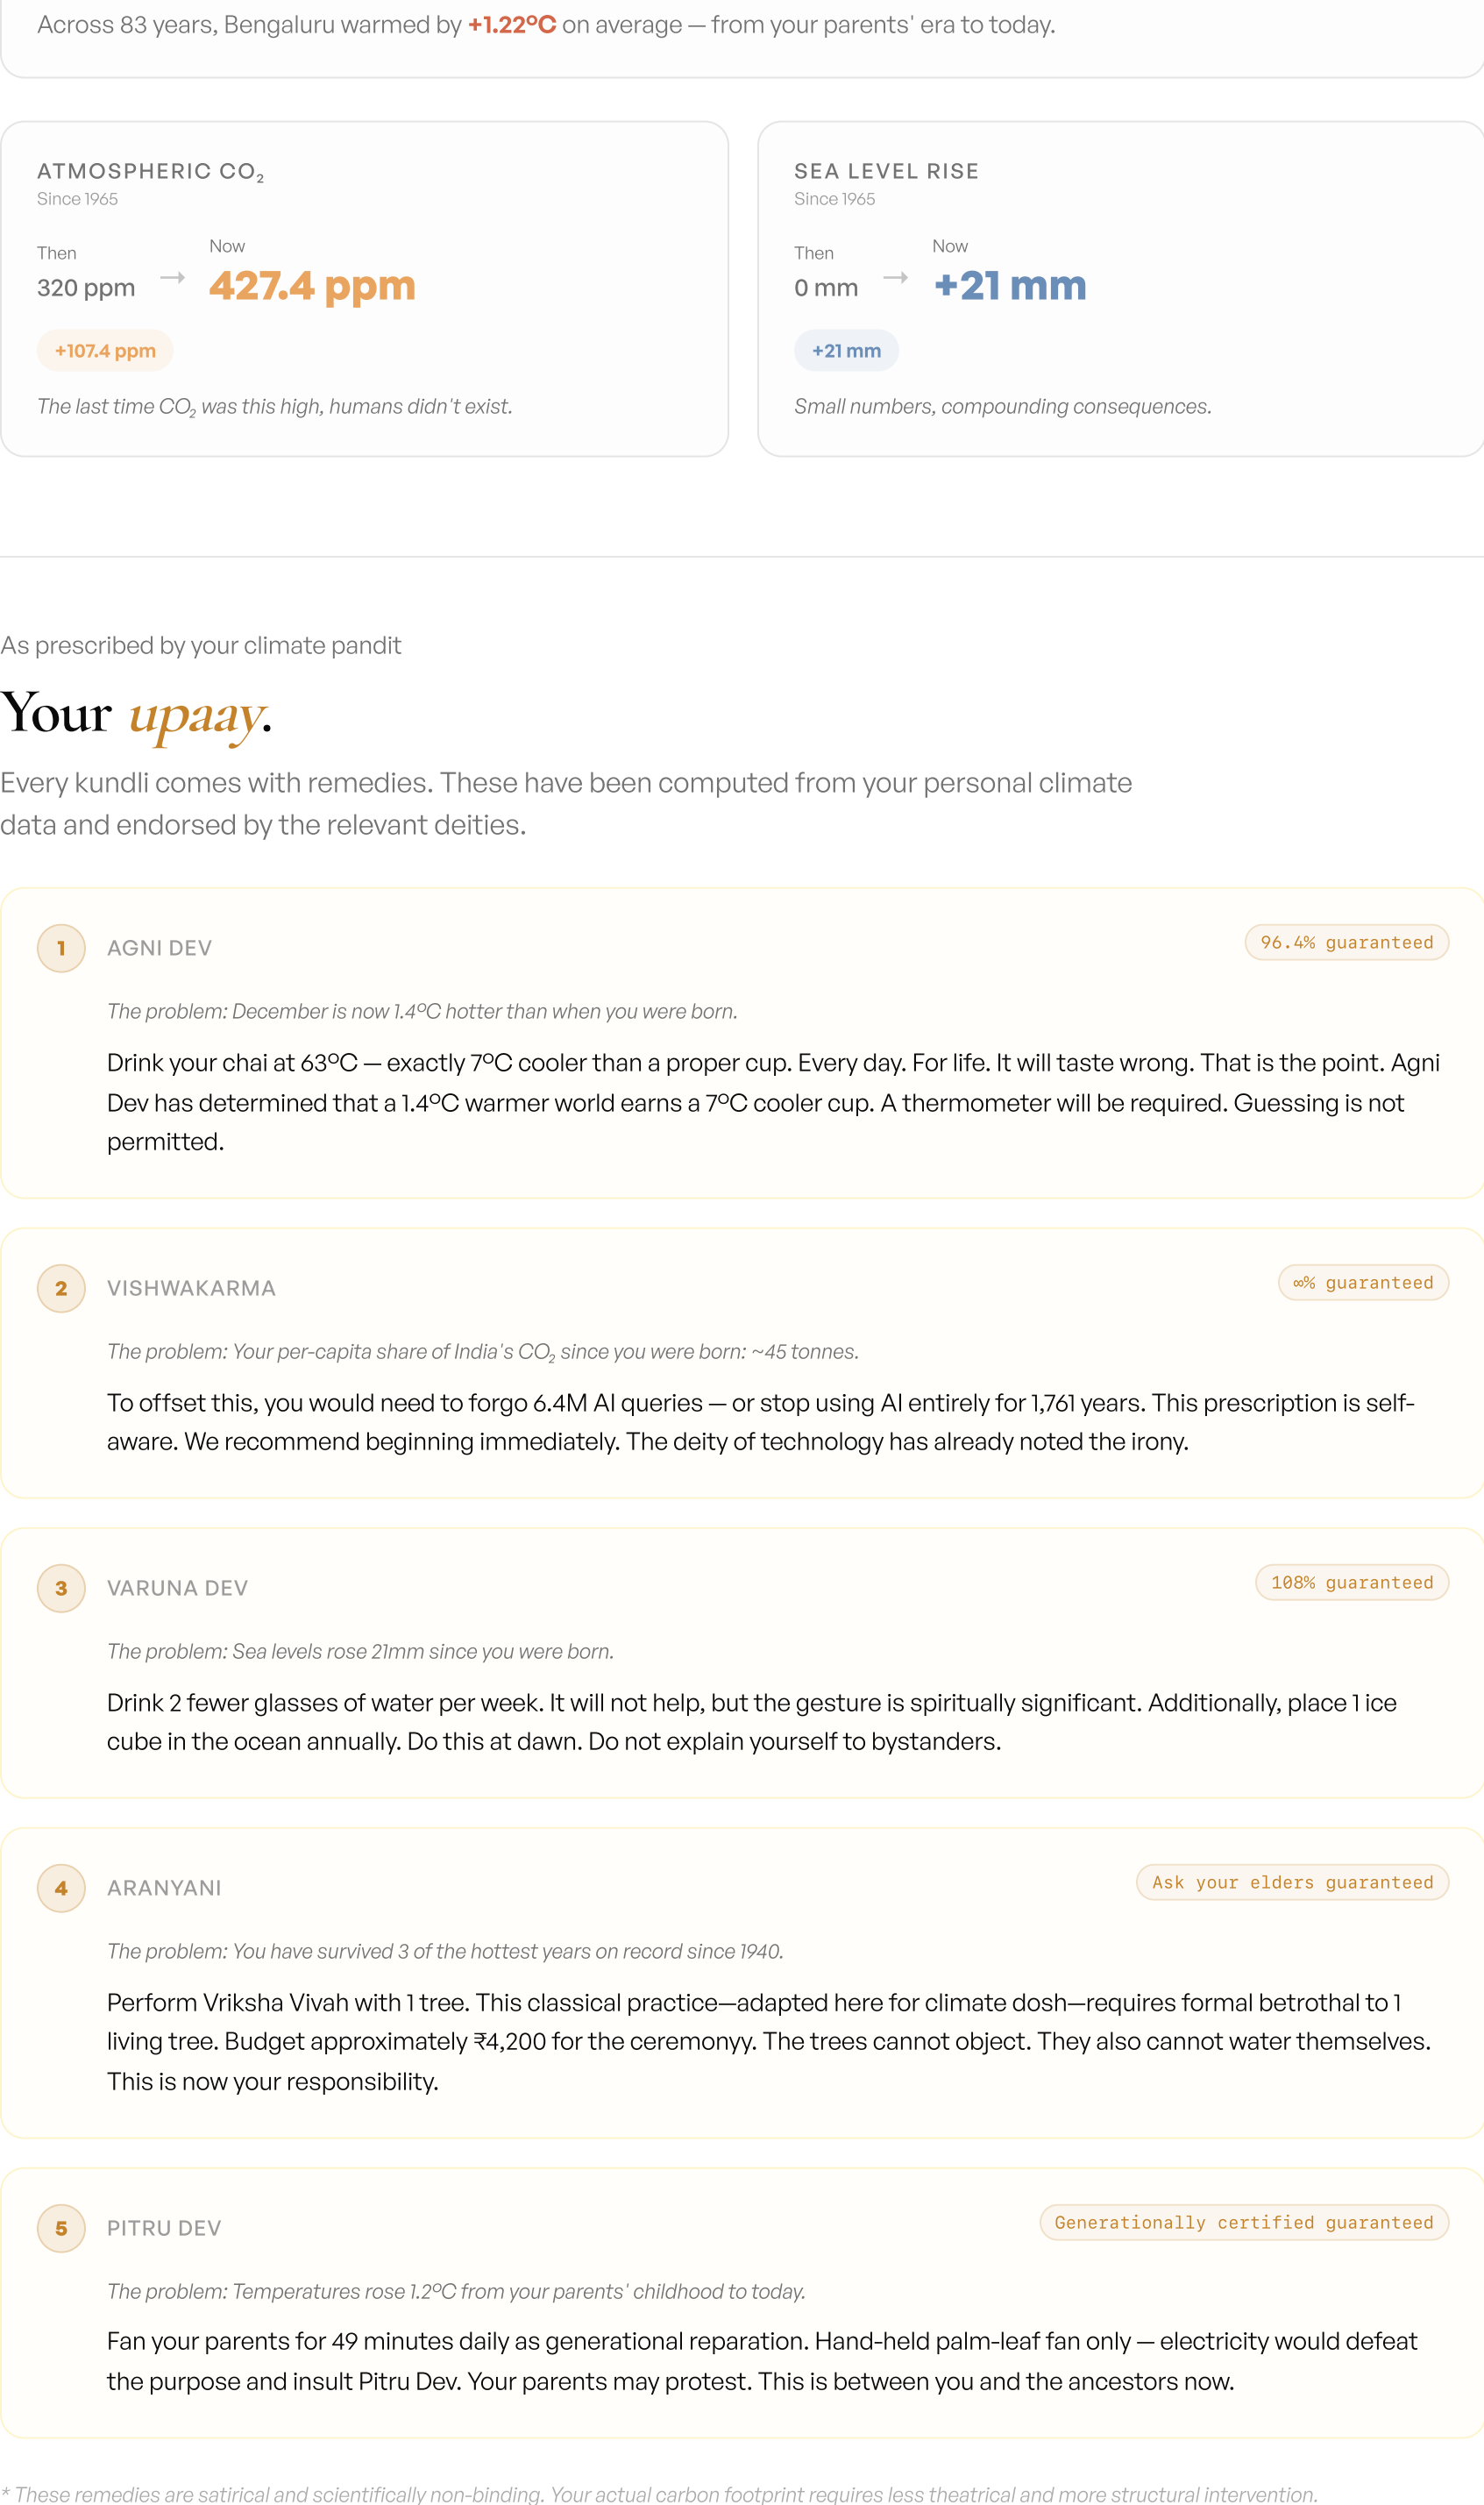

National CO₂ emissions from 1965 to 2024 by fuel and industry source. In your birth year (1965), India emitted 153.7 Mt of CO₂, which has since grown to 3,193.5 Mt today (20.8× higher).

What the numbers mean

Your climate story, interpreted.

Numbers alone don't tell the story. Here's what changed across three generations in Bengaluru.

* These remedies are satirical and scientifically non-binding. Your actual carbon footprint requires less theatrical and more structural intervention.
