

How does your childhood compare to the climate of today?

Bengaluru got hotter while you grew up.

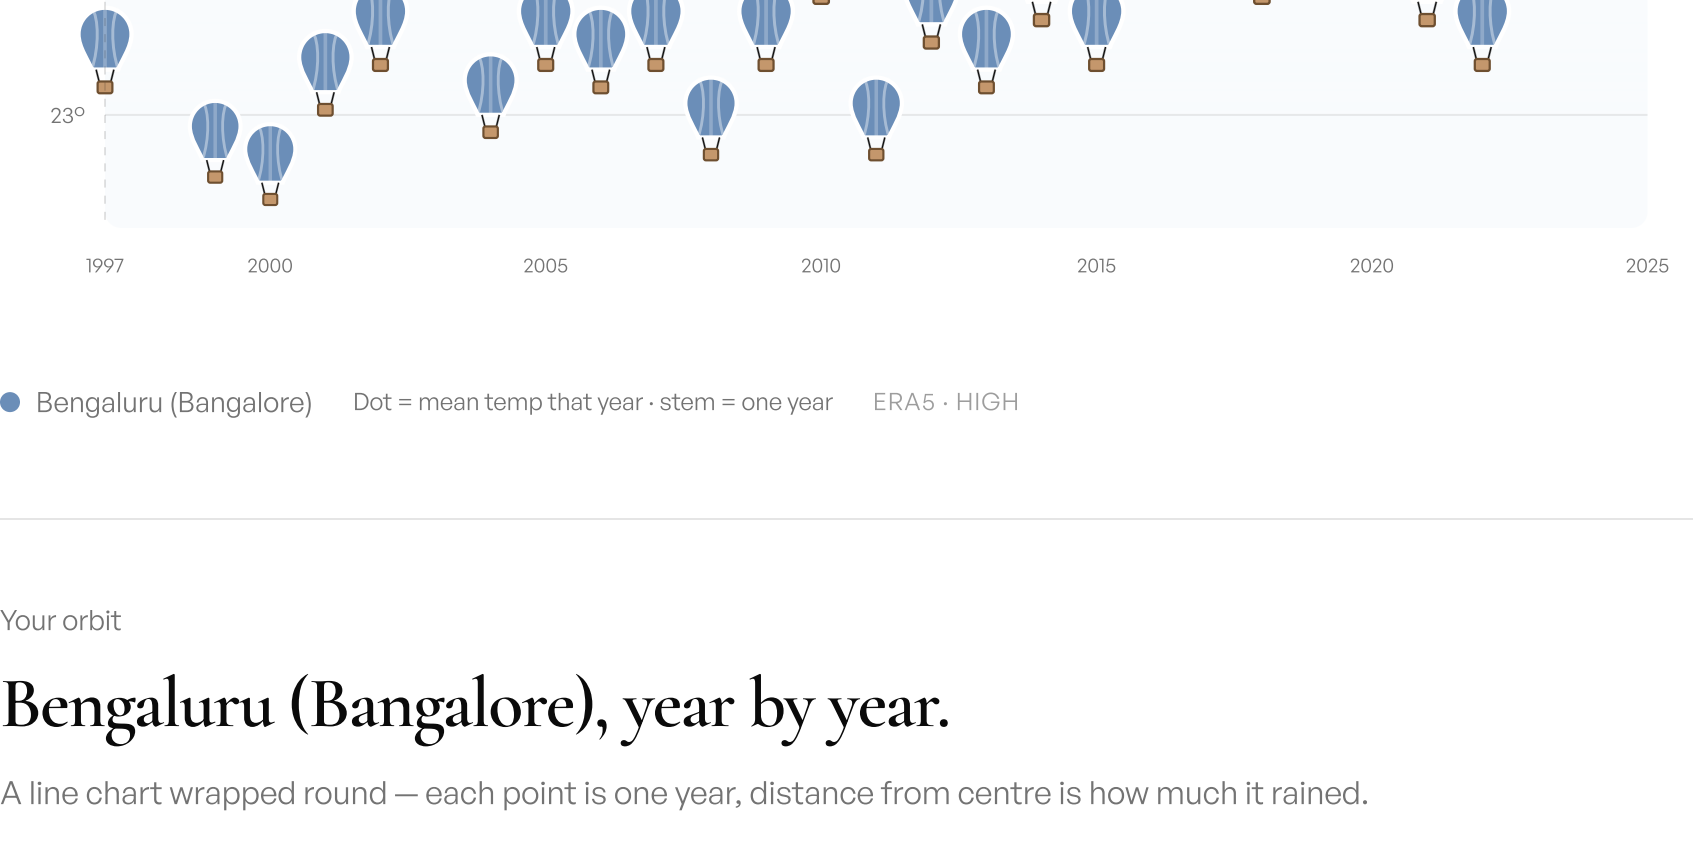

An average December is now 1.3°C warmer than during 1995–1999.

Your climate trail

The air got warmer year by year.

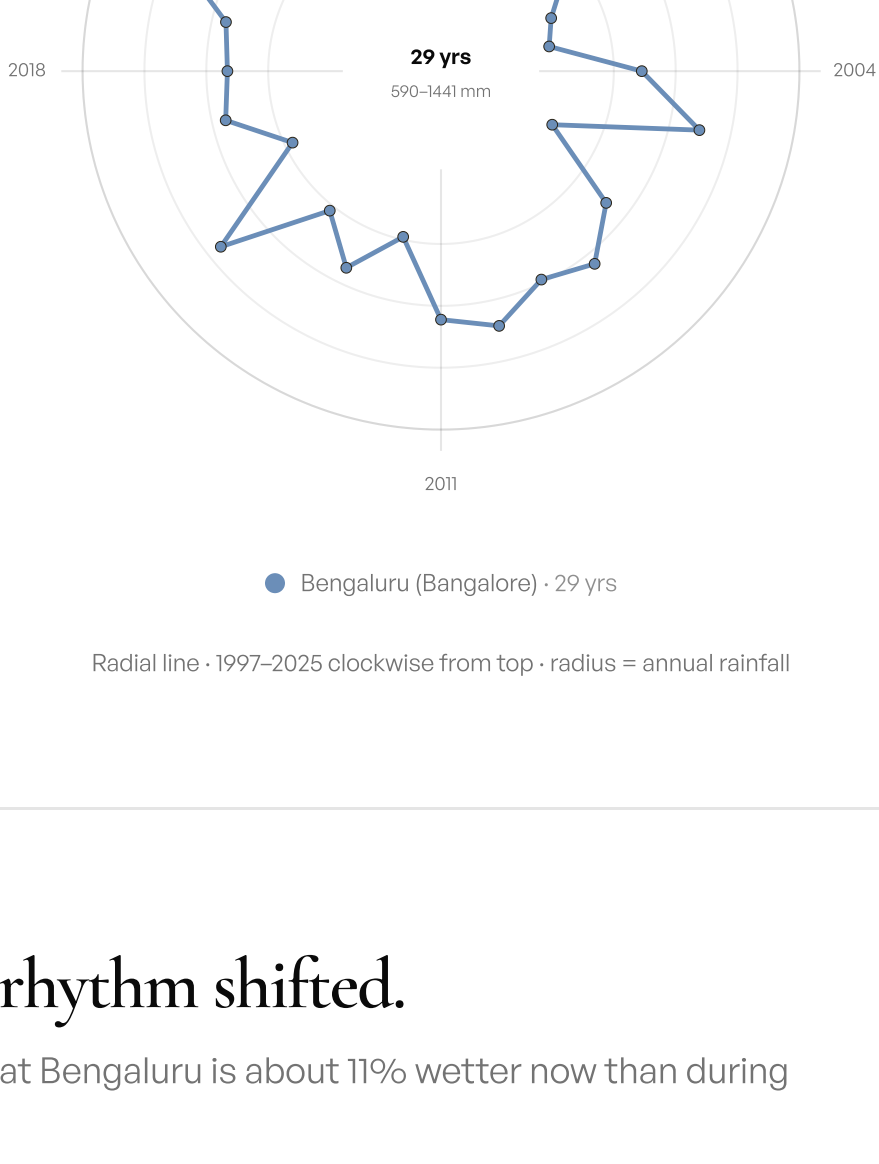

Across 29 years in Bengaluru (Bangalore), annual mean temperature rose 0.7°C from 1997 to 2025 — your warmest year so far was 2024.

Your orbit

Bengaluru (Bangalore), year by year.

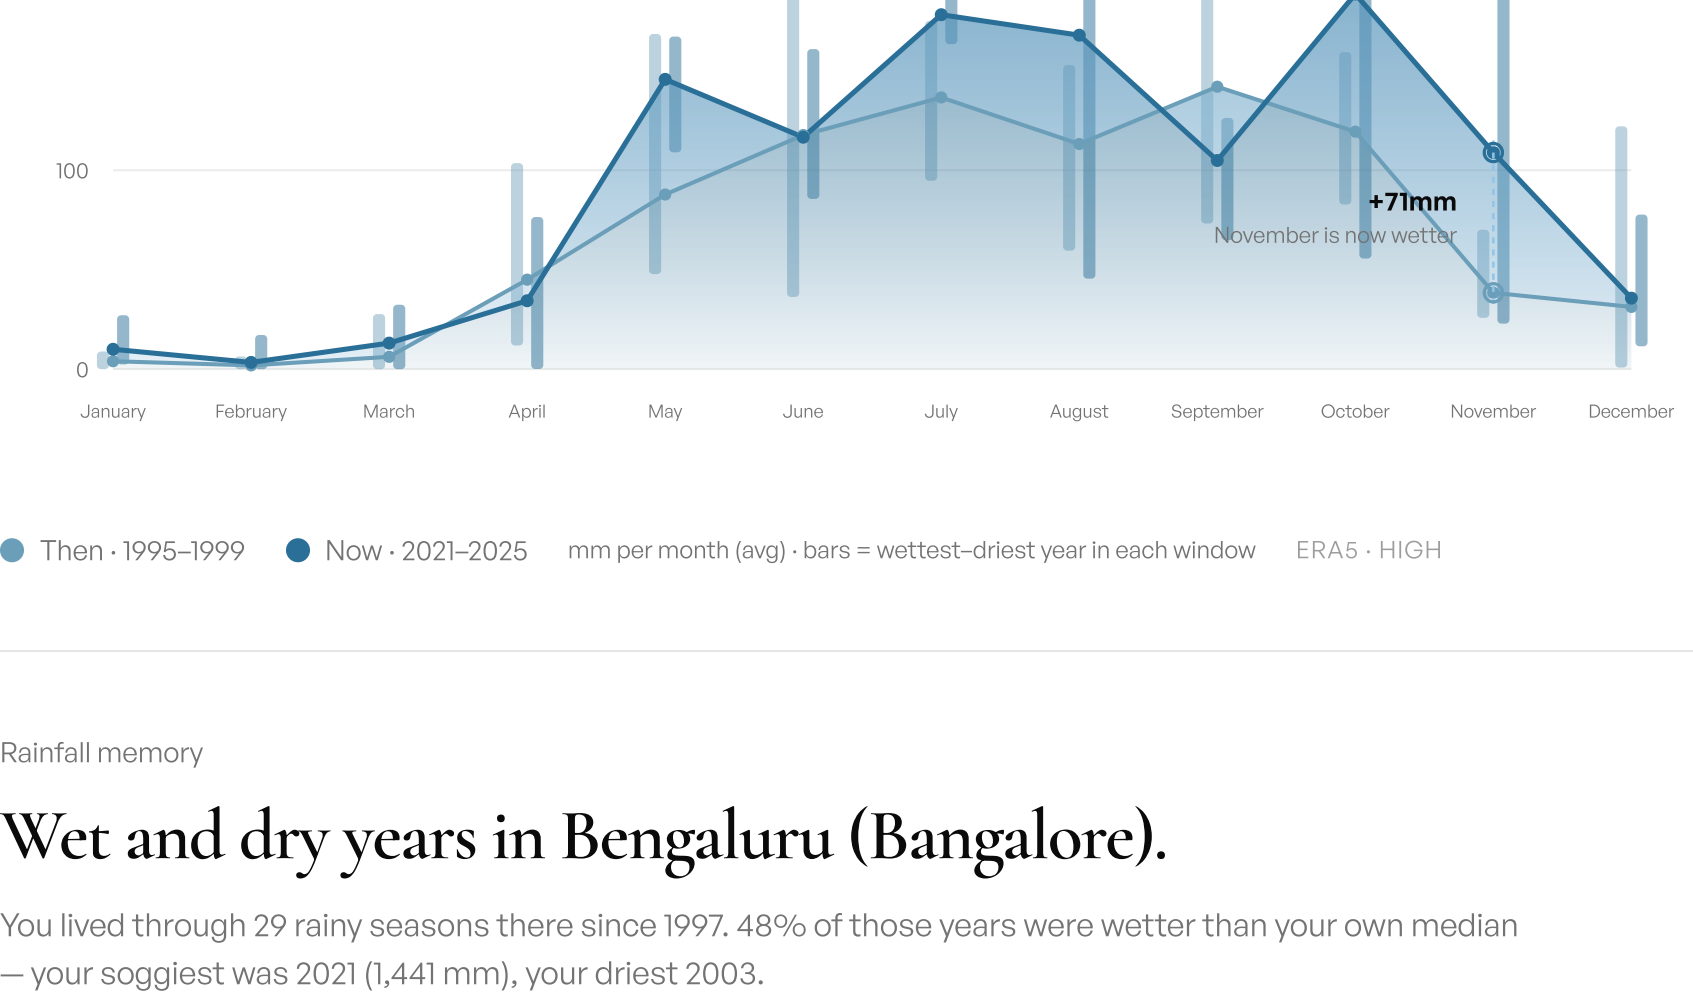

A line chart wrapped round — each point is one year, distance from centre is how much it rained.

Rain

Your monsoon rhythm shifted.

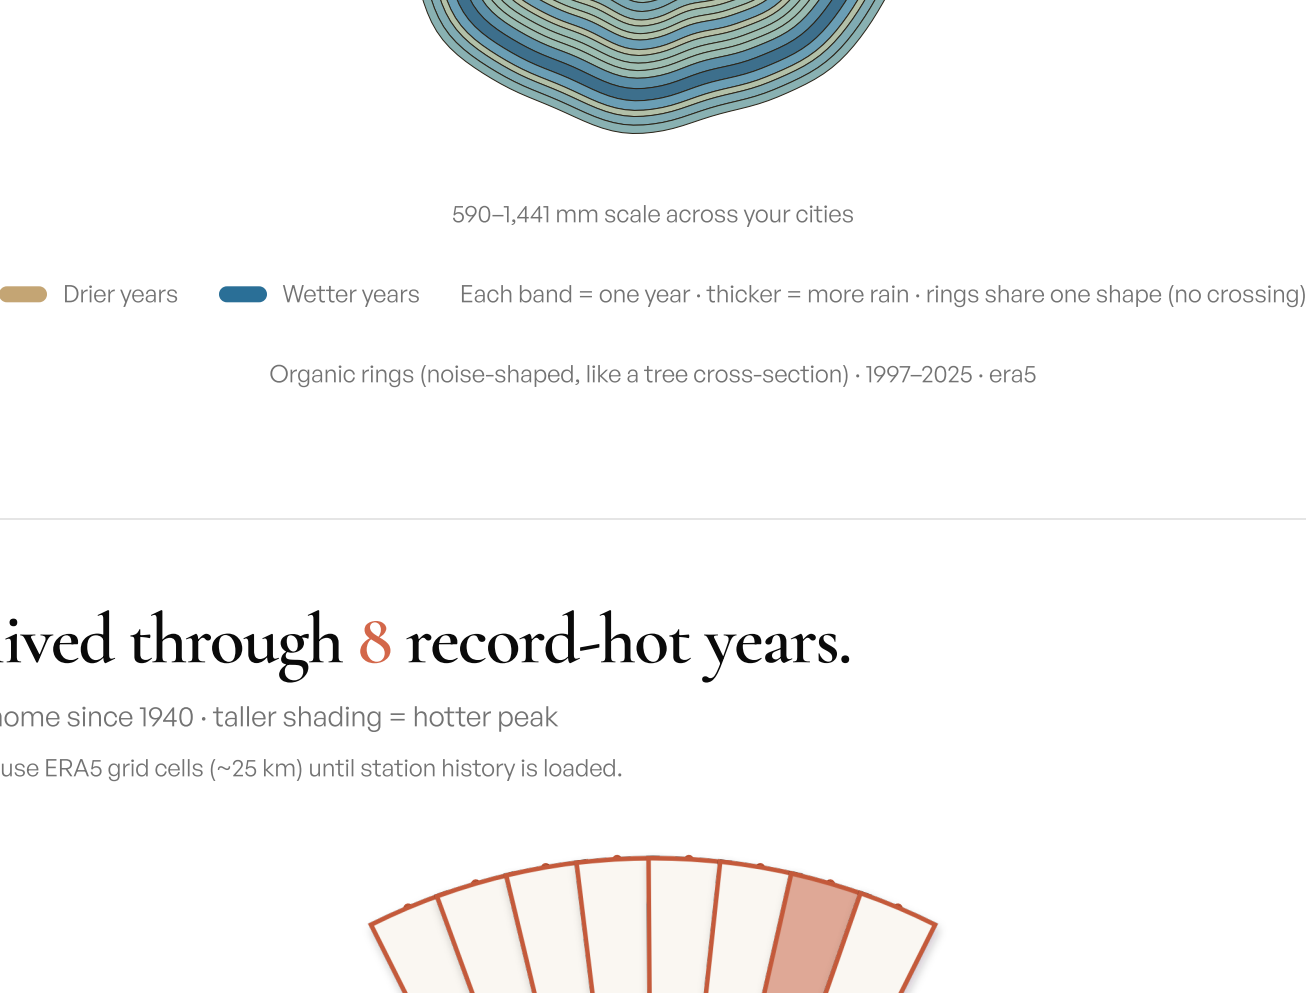

June–September rainfall at Bengaluru is about 11% wetter now than during 1995–1999.

Rainfall memory

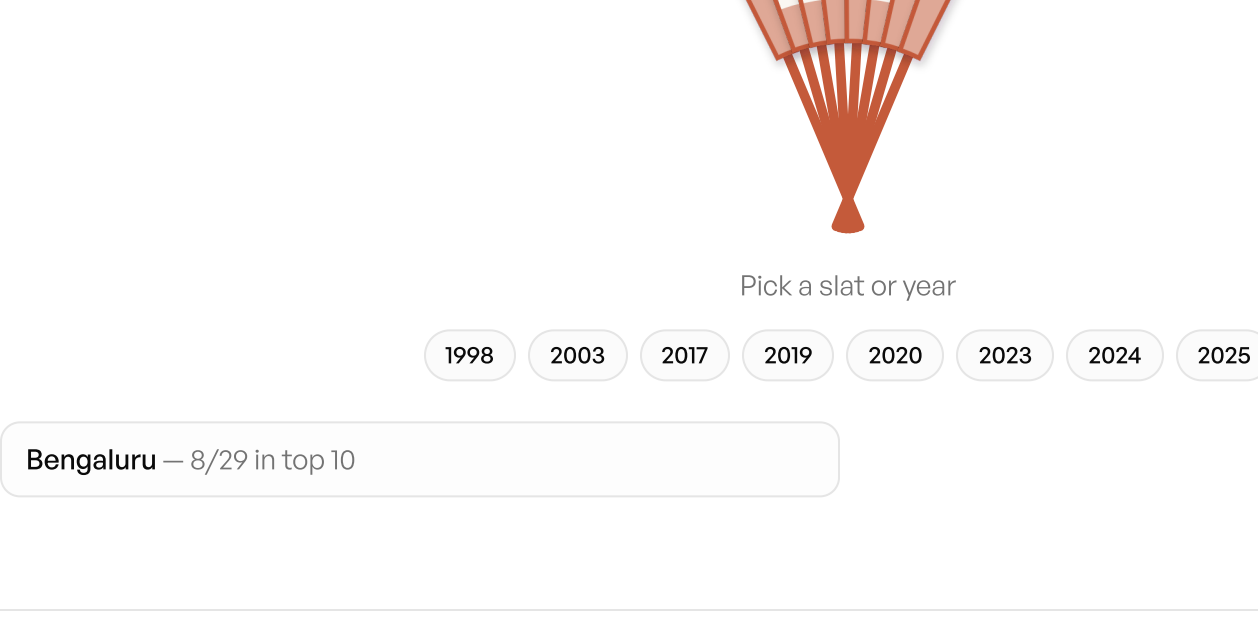

Wet and dry years in Bengaluru (Bangalore).

You lived through 29 rainy seasons there since 1997. 48% of those years were wetter than your own median — your soggiest was 2021 (1,441 mm), your driest 2003.

You've lived through 8 record-hot years.

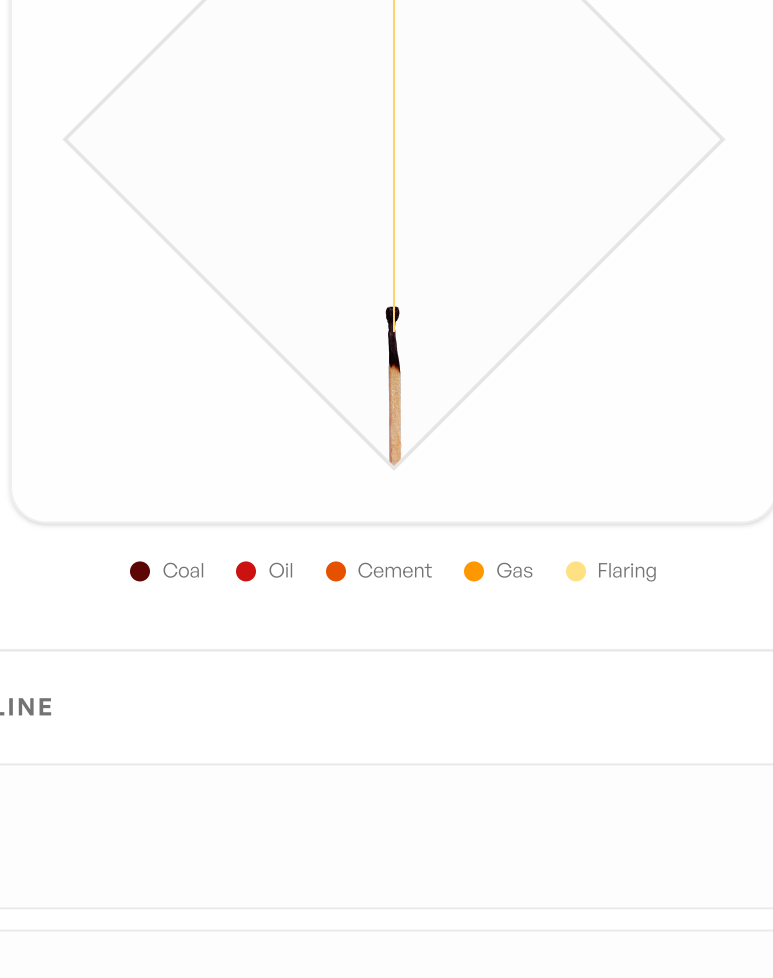

Top 10 at each home since 1940 · taller shading = hotter peak
Other India peaks use ERA5 grid cells (~25 km) until station history is loaded.

Bengaluru — 8/29 in top 10

India's carbon emissions across your lifetime

National CO₂ emissions from 1997 to 2024 by fuel and industry source. In your birth year (1997), India emitted 858 Mt of CO₂, which has since grown to 3,193.5 Mt today (3.7× higher).

In 2024, when you were age 27, global CO₂ was 424 ppm. India emitted 3,193.5 Mt of CO₂. This is 3.7× the emissions level of your birth year (858 Mt, when global CO₂ was 363.9 ppm; today it is 427.4 ppm).

Interpretation: The diamond shapes your timeline from birth (bottom matchstick head) to today (top vertex). The organic stacked plume represents CO₂ emissions contributions by source: Coal, Oil, Cement, Gas, and Flaring, which expand like smoke as emissions grow.

What the numbers mean

Your climate story, interpreted.

Numbers alone don't tell the story. Here's what changed across three generations in Bengaluru.

As prescribed by your climate pandit

Your *upaay*.

Every kundli has remedies. These have been computed from your personal climate data and endorsed by the relevant deities.

1 AGNI DEV 96.4% guaranteed

The problem: December is now 1.3°C hotter than when you were born.

Drink your chai at 63°C — exactly 7°C cooler than a proper cup. Every day. For life. It will taste wrong. That is the point. Agni Dev has determined that a 1.3°C warmer world earns a 7°C cooler cup. A thermometer will be required. Guessing is not permitted.

2 VISHWAKARMA 96% guaranteed

The problem: Your per-capita share of India's CO₂ since you were born: ~36 tonnes.

To offset this, you would need to forgo 5.1M AI queries — or stop using AI entirely for 1,409 years. This prescription is self-aware. We recommend beginning immediately. The deity of technology has already noted the irony.

3 VARUNA DEV 188% guaranteed

The problem: Sea levels rose 2mm since you were born.

Drink 1 fewer glass of water per week. It will not help, but the gesture is spiritually significant. Additionally, place 1 ice cube in the ocean annually. Do this at dawn. Do not explain yourself to bystanders.

4 ARANYANI Ask your elders guaranteed

The problem: You have survived 8 of the hottest years on record since 1940.

Perform Vriksha Vivah with 3 trees. This classical practice—adapted here for climate dosh—requires formal betrothal to 3 living trees. Budget approximately ₹12,600 for the ceremonies. The trees cannot object. They also cannot water themselves. This is now your responsibility.

5 PITRU DEV Generationally certified guaranteed

The problem: Temperatures rose 0.9°C from your parents' childhood to today.

Fan your parents for 37 minutes daily as generational reparation. Hand-held palm-leaf fan only — electricity would defeat the purpose and insult Pitru Dev. Your parents may protest. This is between you and the ancestors now.

* These remedies are satirical and scientifically non-binding. Your actual carbon footprint requires less theatrical and more structural intervention.
