

How does your childhood compare to the climate of today?

Haridwar got hotter while you grew up.

An average October is now 1.8°C warmer than during 1982–1986.

Your climate trail

The air got warmer year by year.

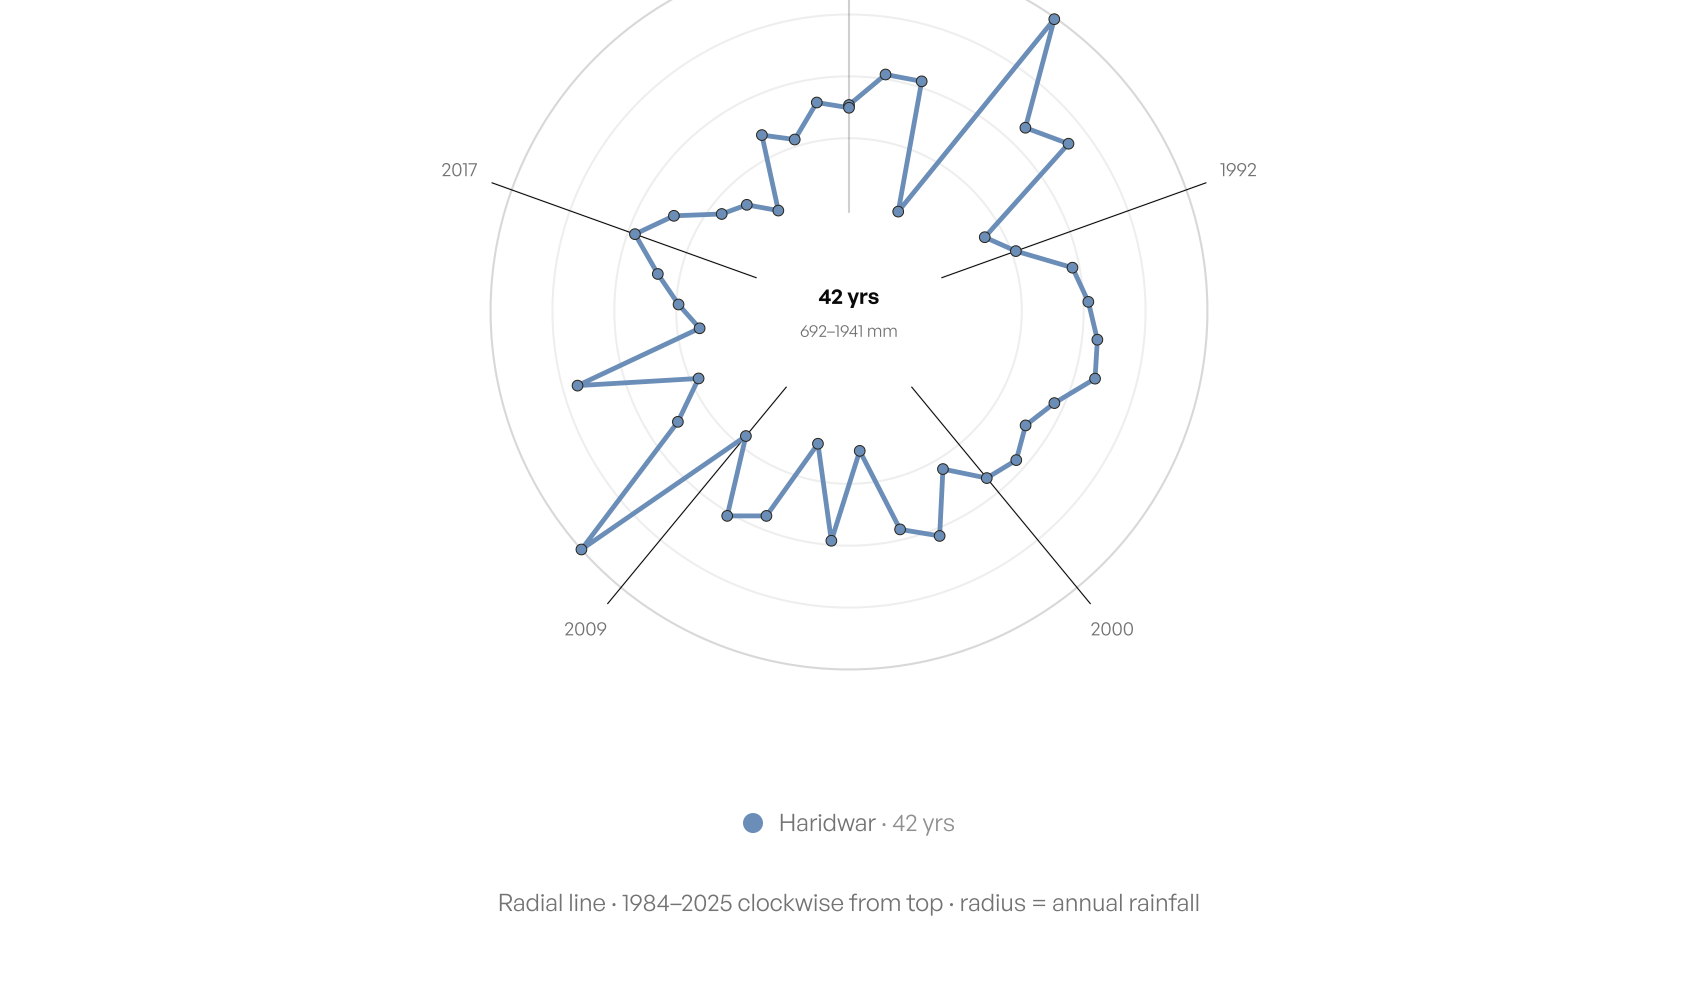

Across 42 years in Haridwar, annual mean temperature rose 0.4°C from 1984 to 2025 — your warmest year so far was 2010.

Your orbit

Haridwar, year by year.

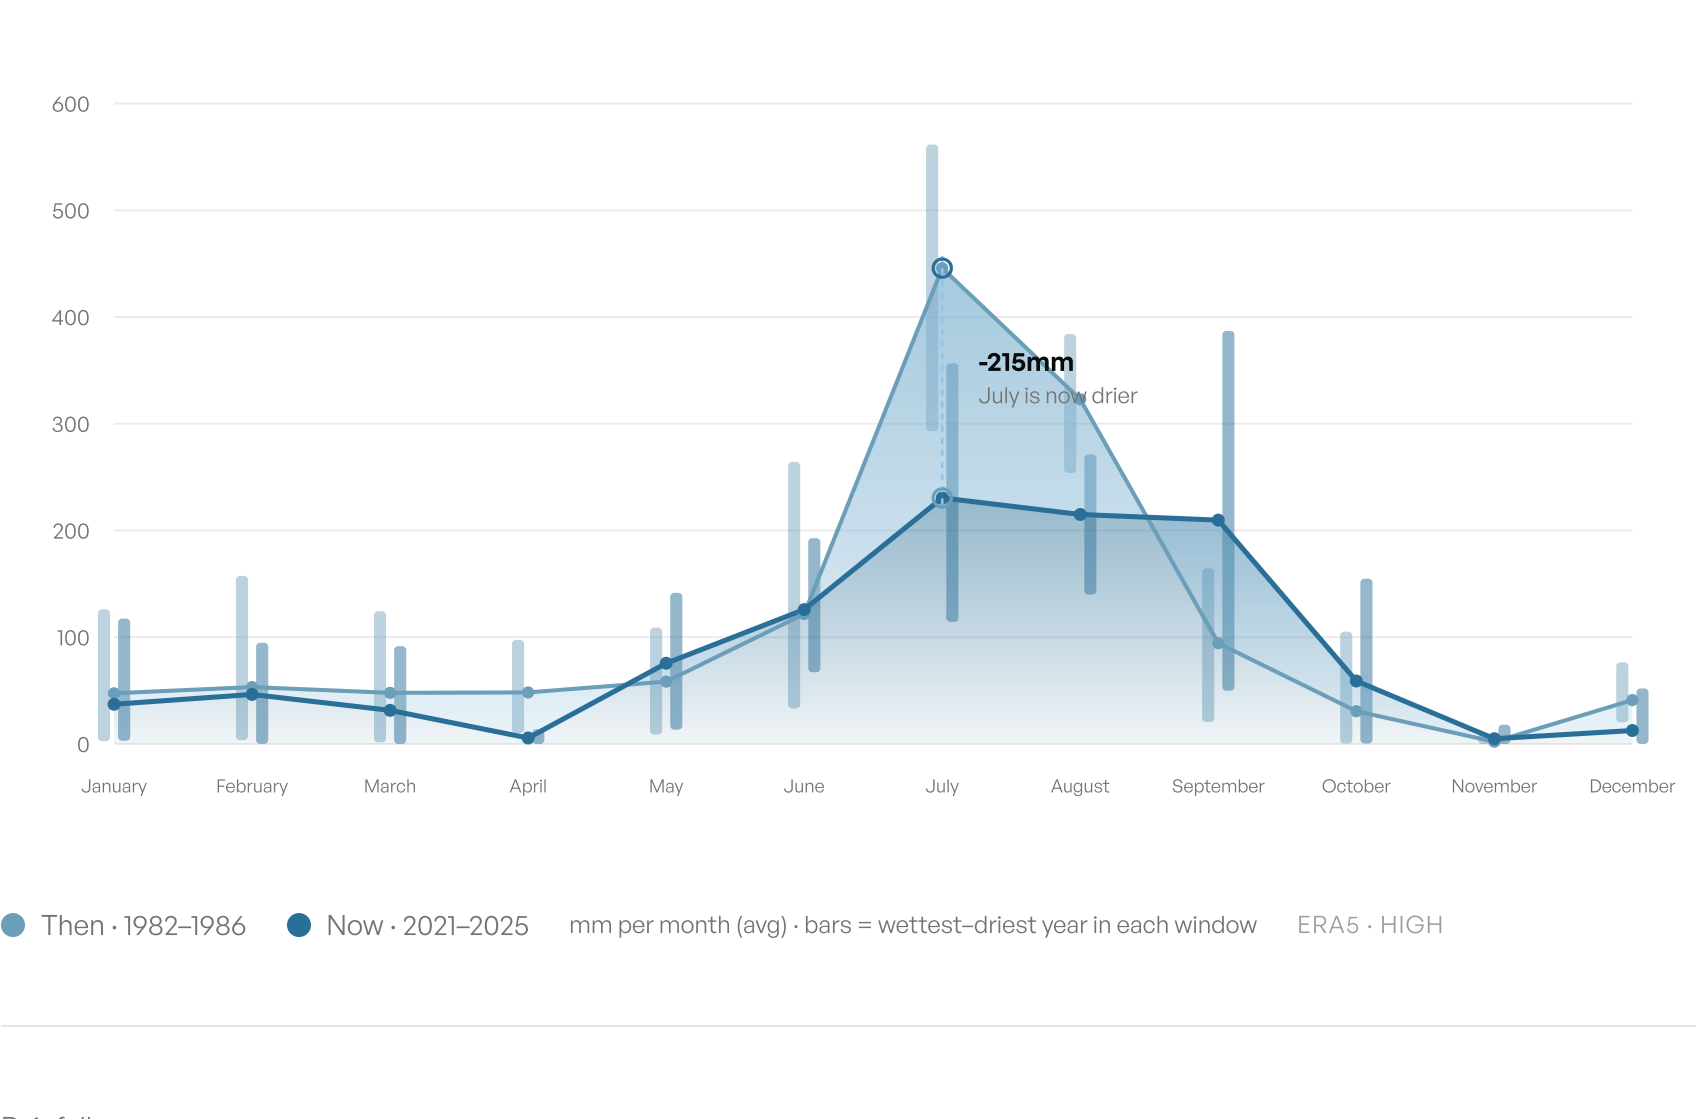

A line chart wrapped round — each point is one year, distance from centre is how much it rained.

Rain

Extreme rain days eased.

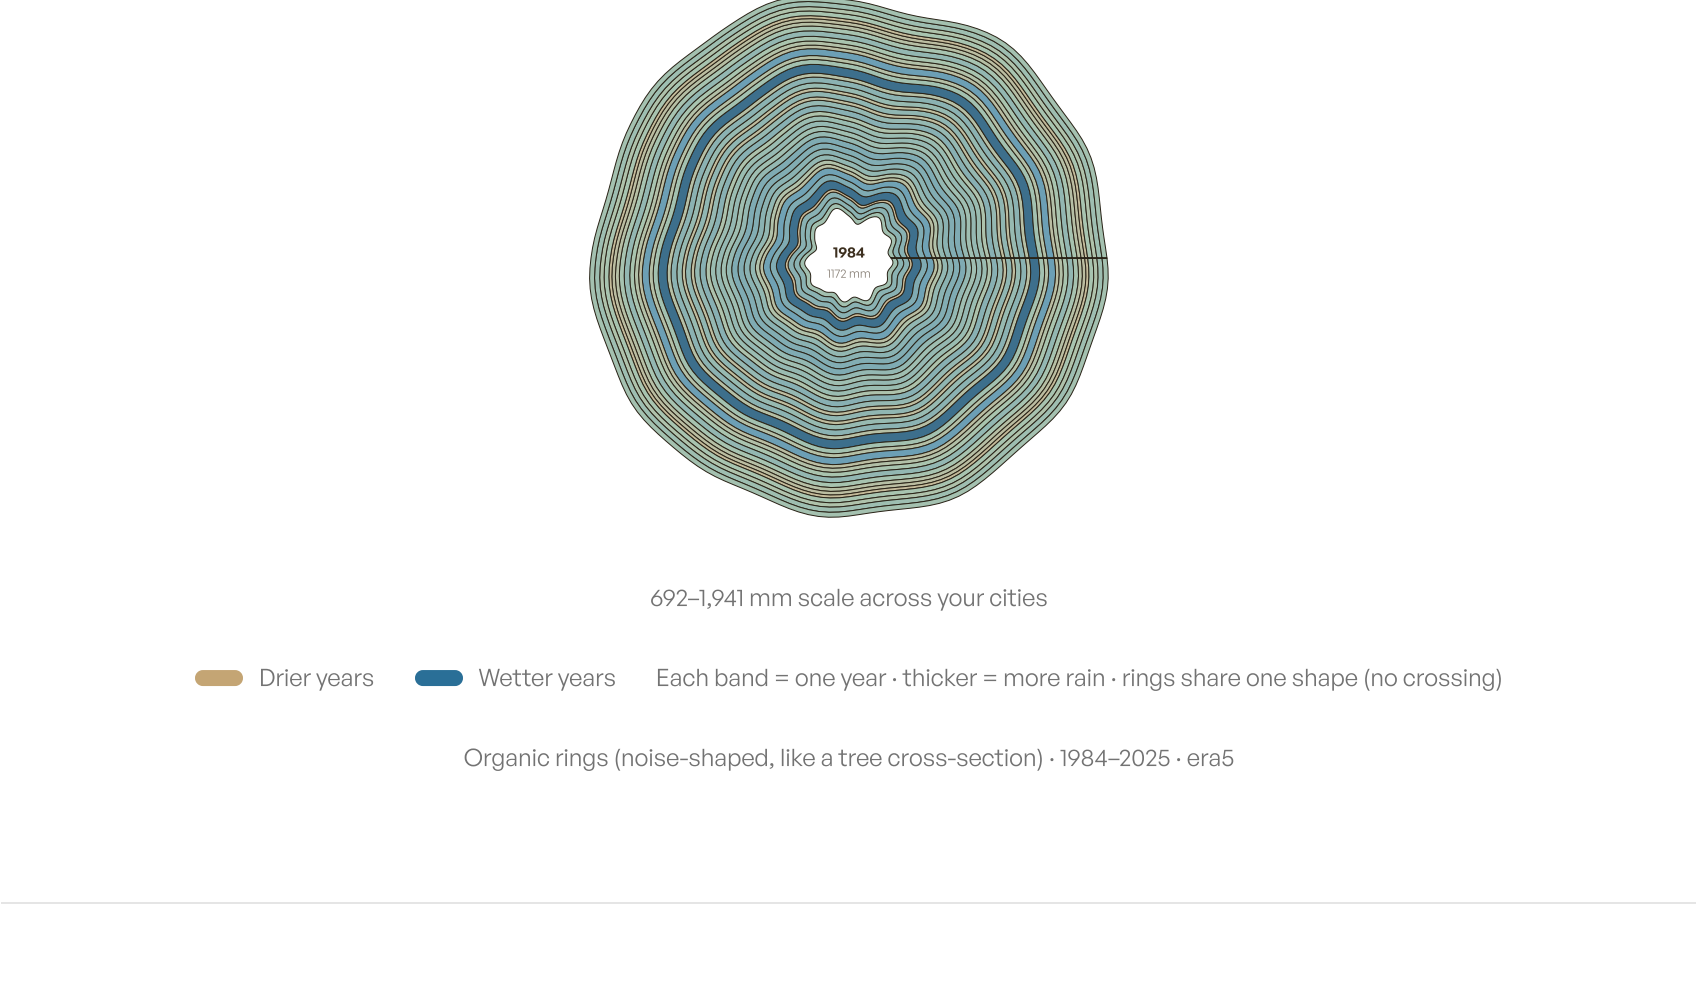

Haridwar sees about 1.6 fewer 50mm+ days per year than during 1982–1986.

Rainfall memory

Wet and dry years in Haridwar.

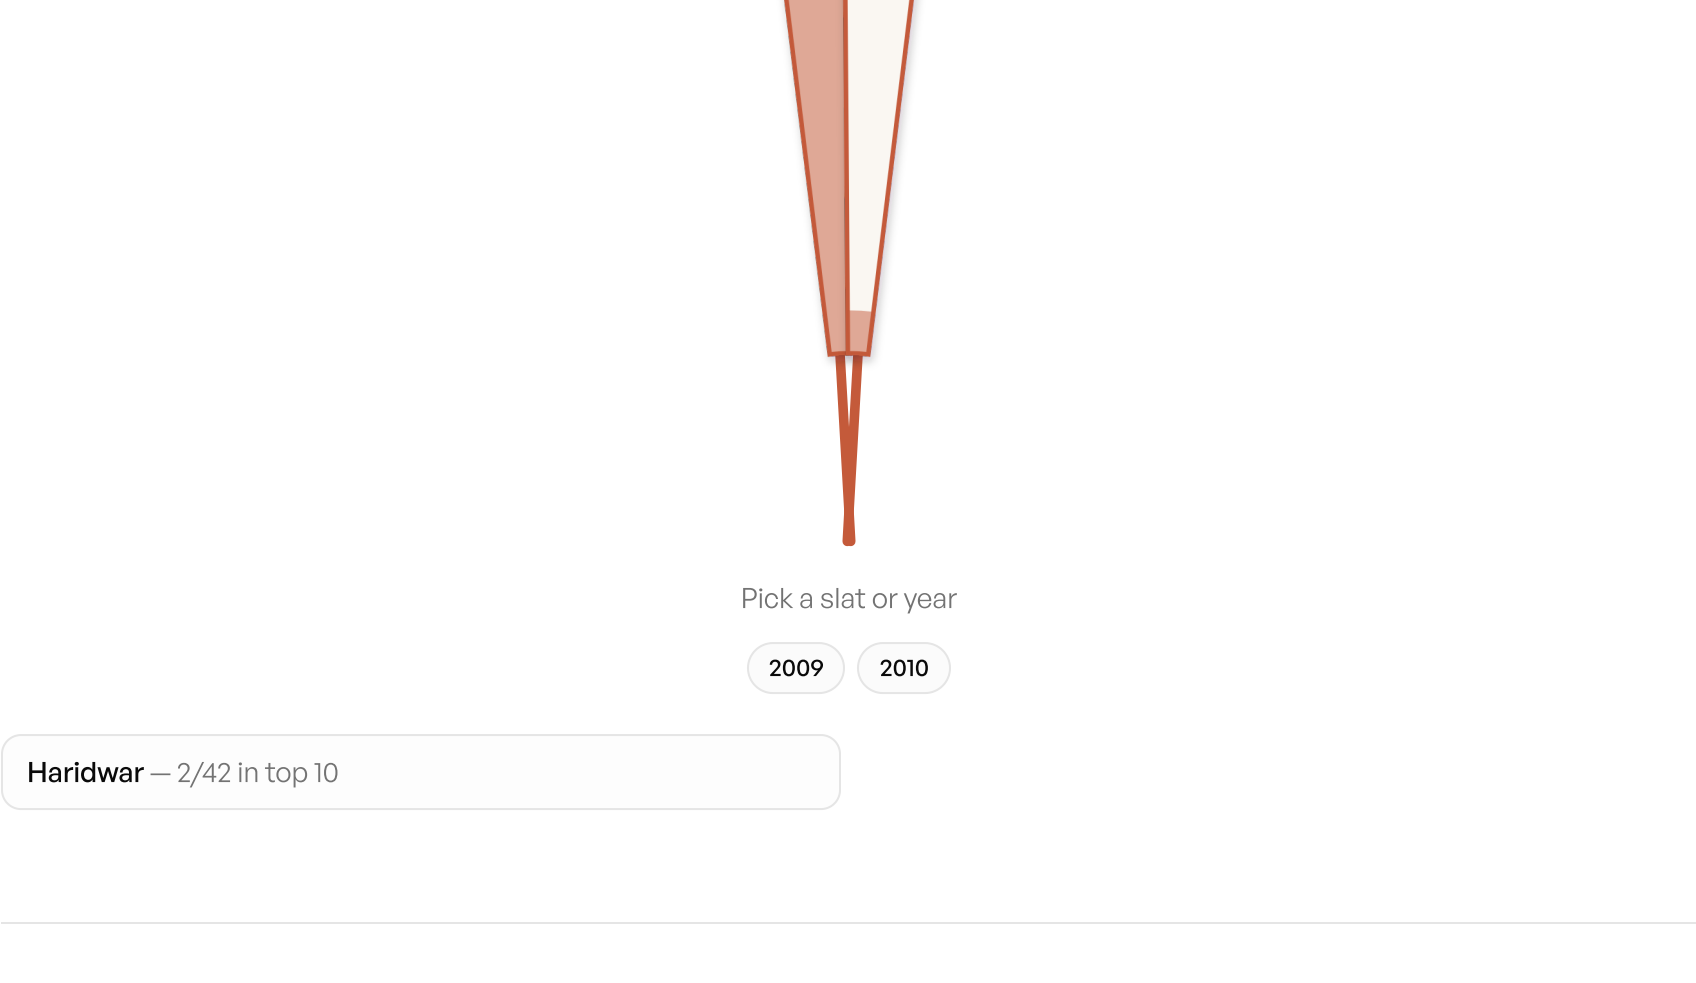

You lived through 42 rainy seasons there since 1984. 50% of those years were wetter than your own median — your soggiest was 2010 (1,941 mm), your driest 1987.

You've lived through 2 record-hot years.

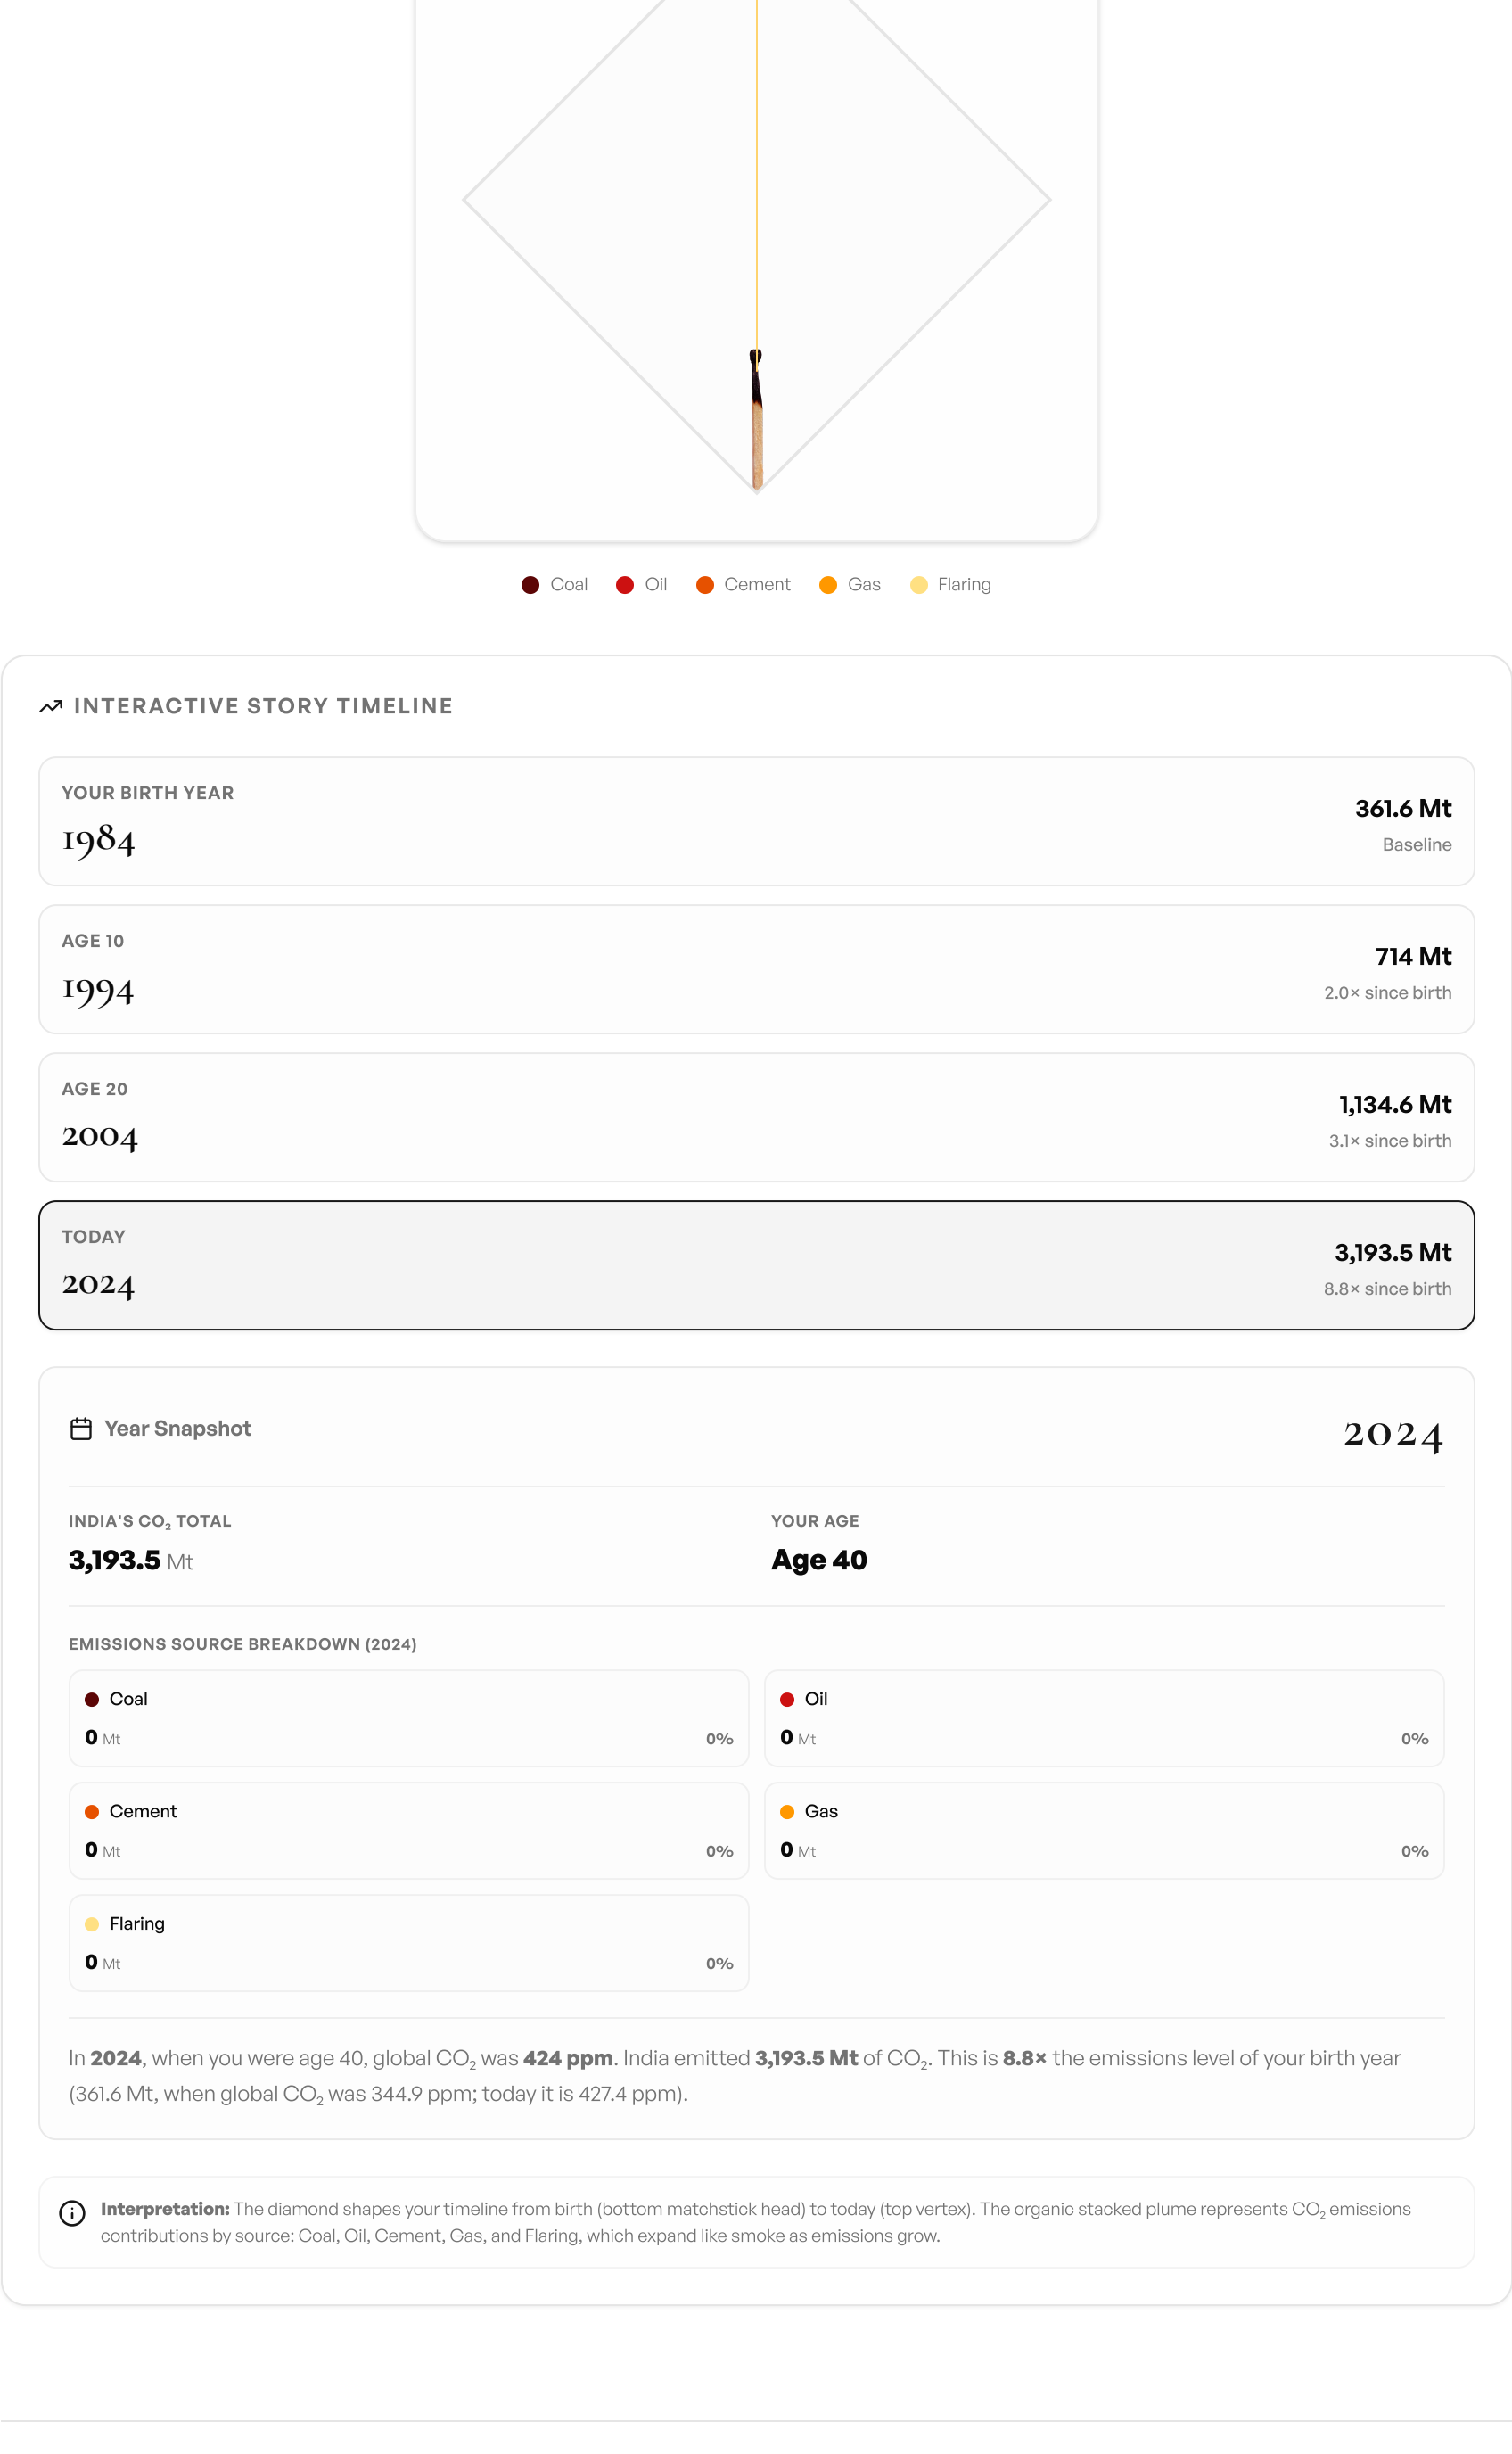

Top 10 at each home since 1940 · taller shading = hotter peak

Other India peaks use ERA5 grid cells (~25 km) until station history is loaded.

India's carbon emissions across your lifetime

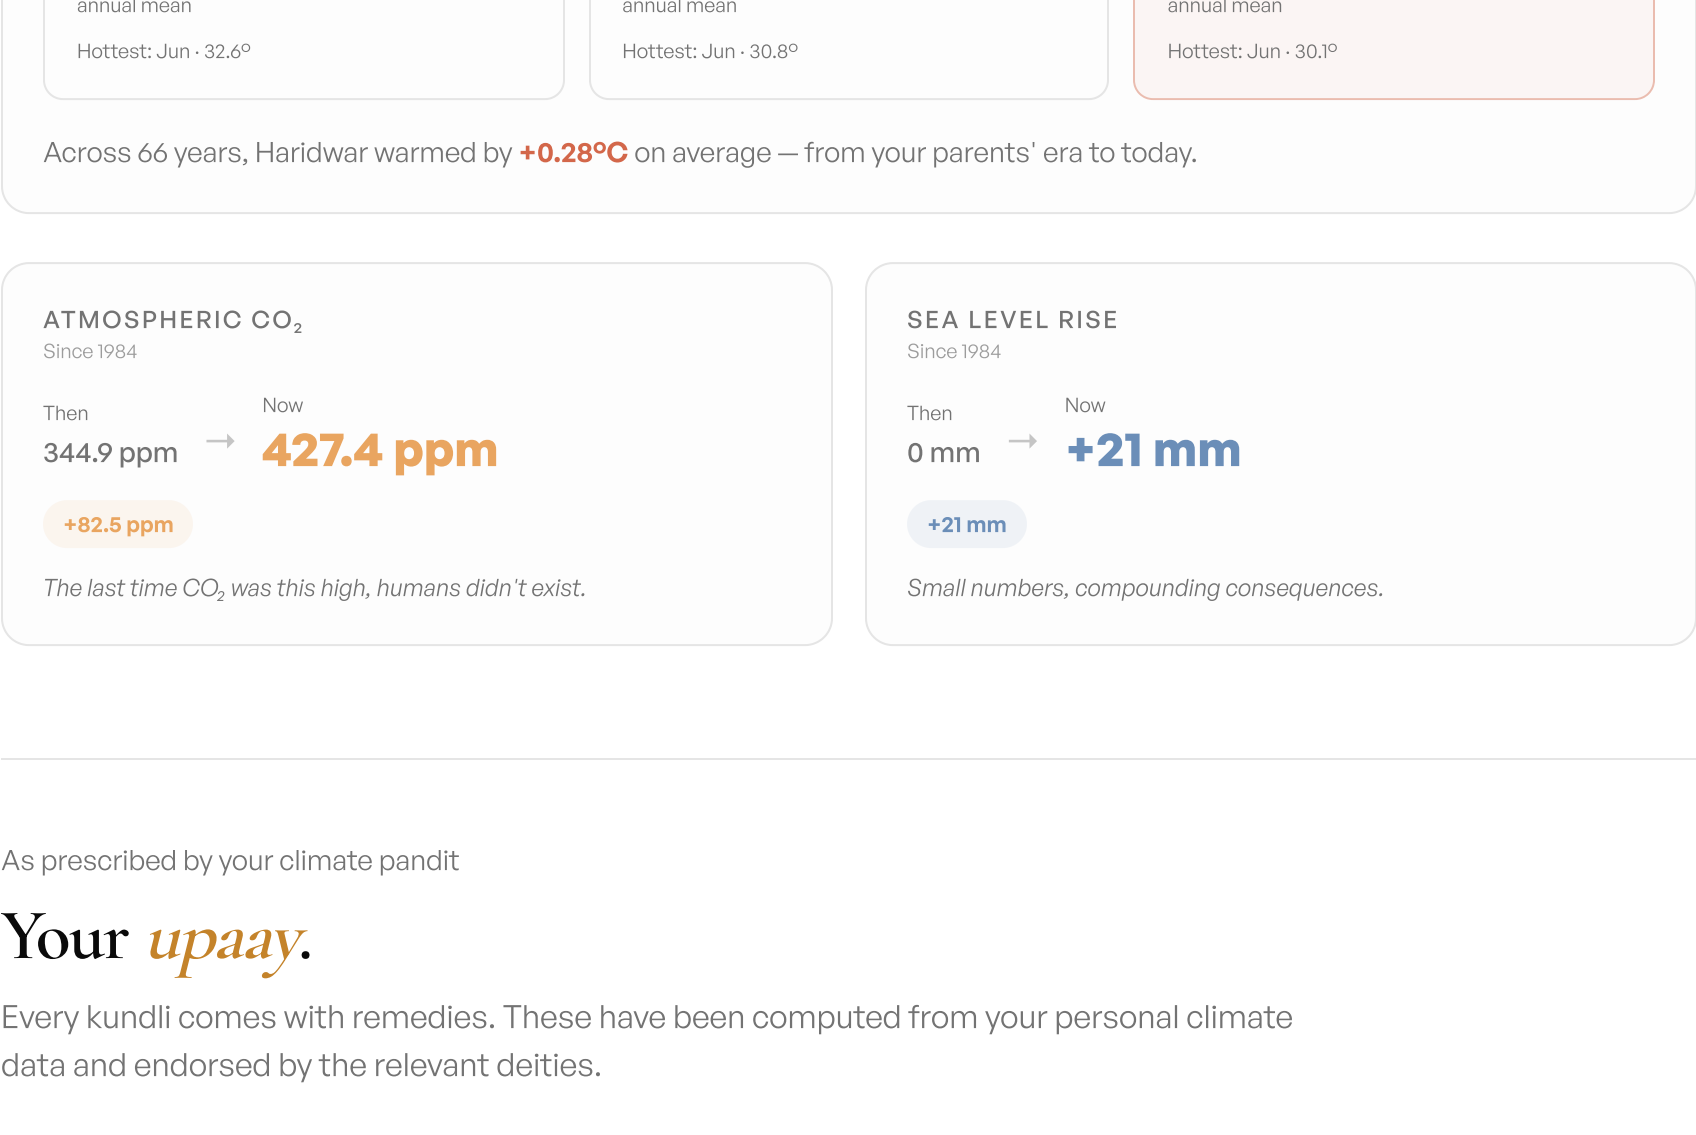

National CO₂ emissions from 1984 to 2024 by fuel and industry source. In your birth year (1984), India emitted 361.6 Mt of CO₂, which has since grown to 3,193.5 Mt today (8.8× higher).

What the numbers mean

Your climate story, interpreted.

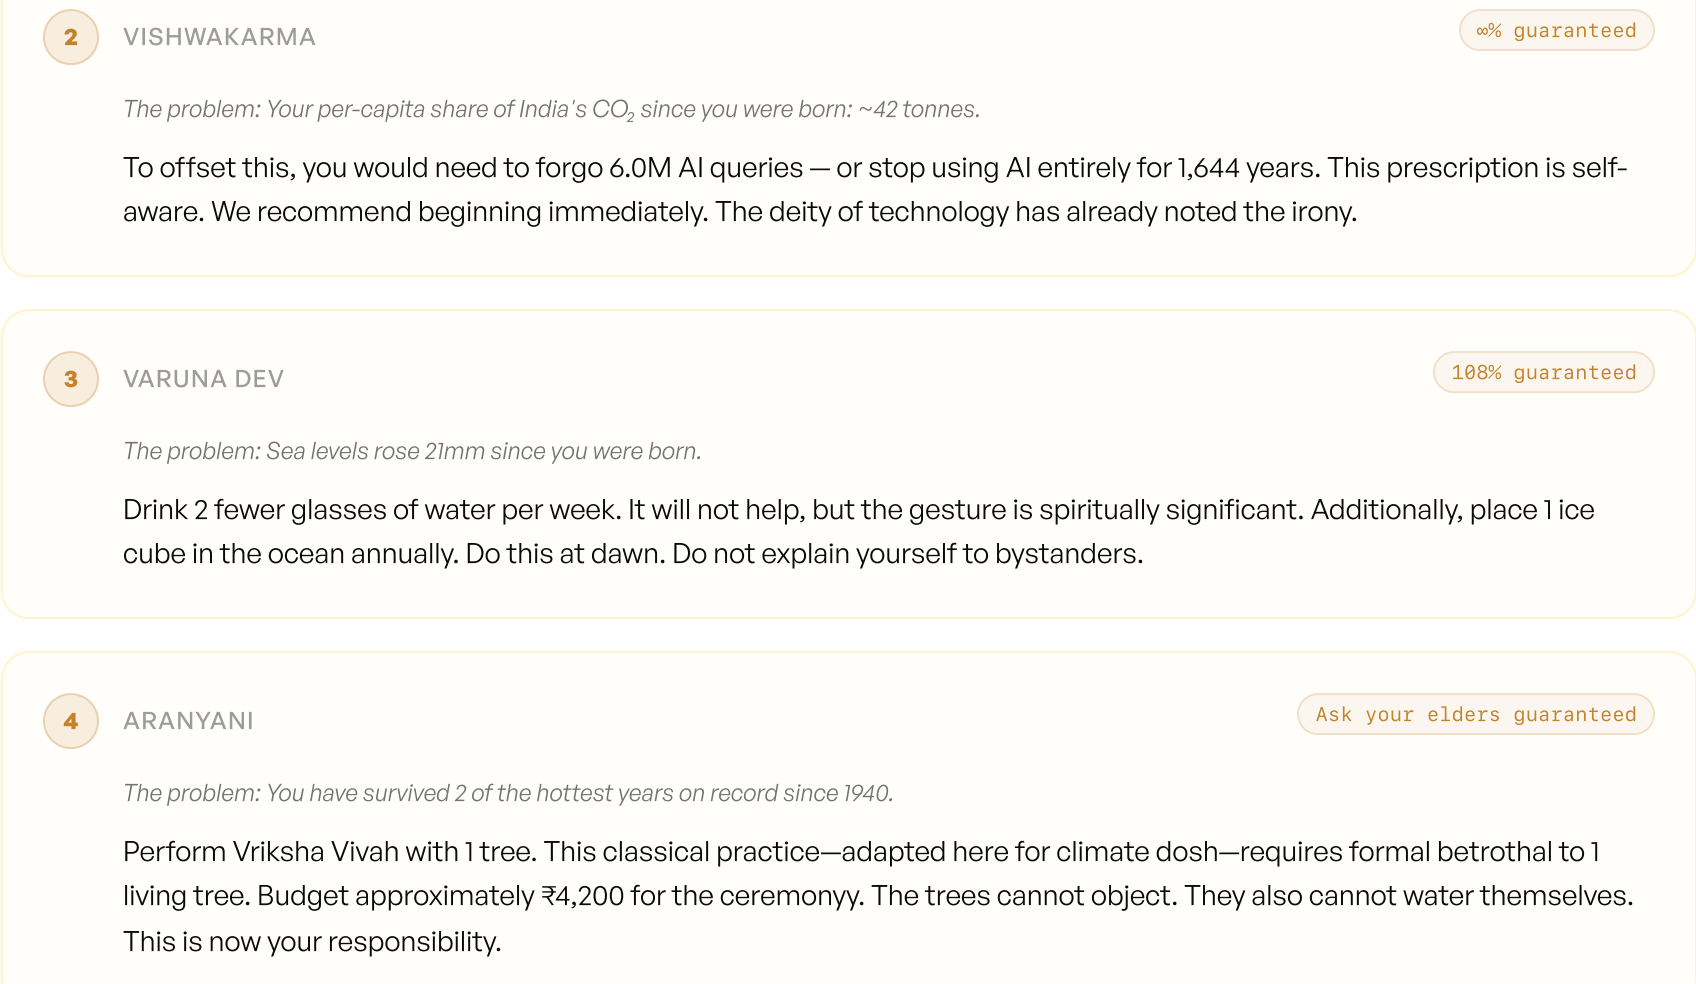

Numbers alone don't tell the story. Here's what changed across three generations in Haridwar.

As prescribed by your climate pandit

Your upaay.

Every kundli comes with remedies. These have been computed from your personal climate data and endorsed by the relevant deities.

* These remedies are satirical and scientifically non-binding. Your actual carbon footprint requires less theatrical and more structural intervention.
