

How does your childhood compare to the climate of today?

Hyderabad bucked the trend.

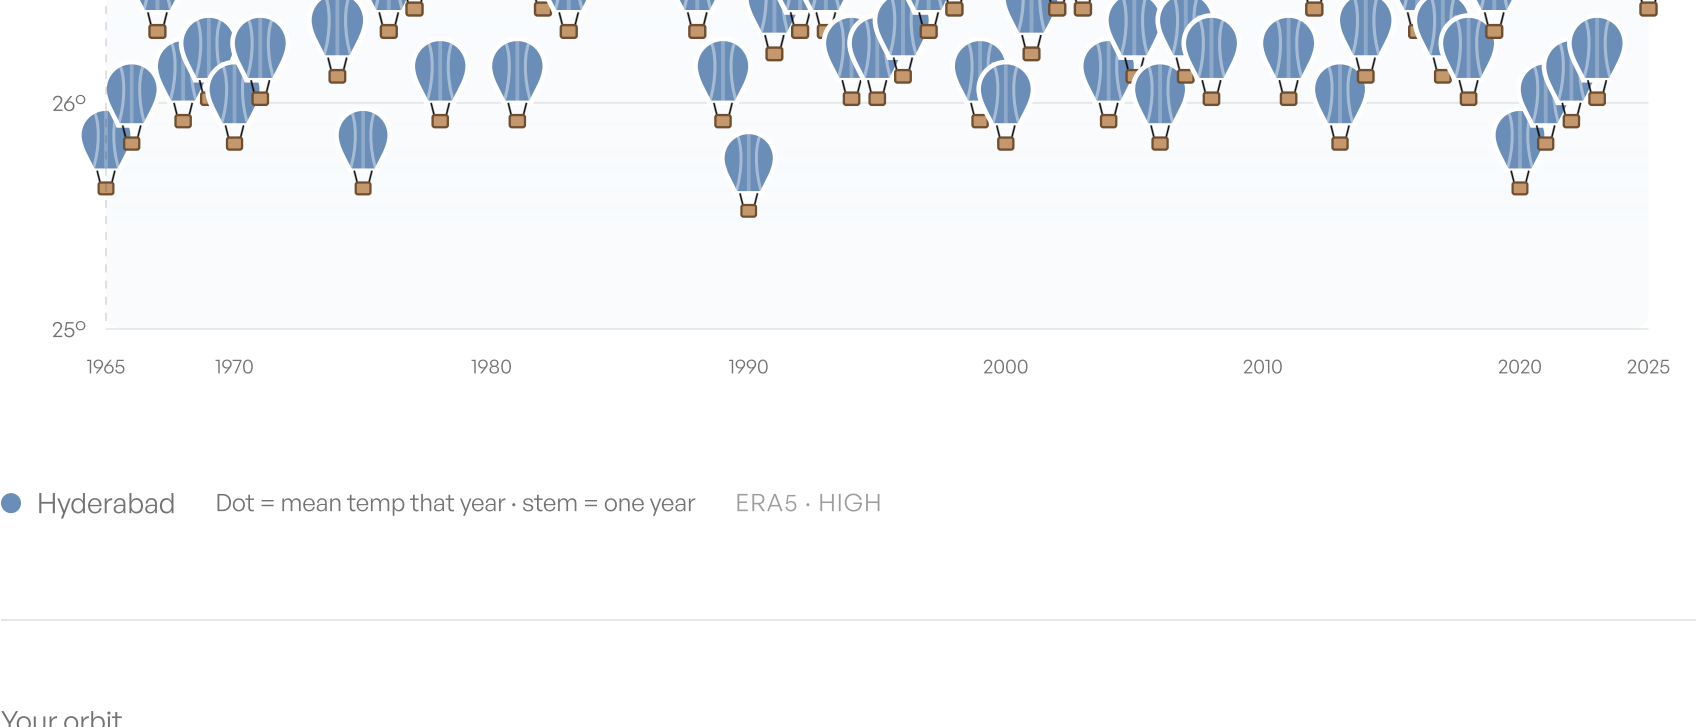

An average May now runs 2.7°C cooler than during 1963–1967.

Your climate trail

The air got warmer year by year.

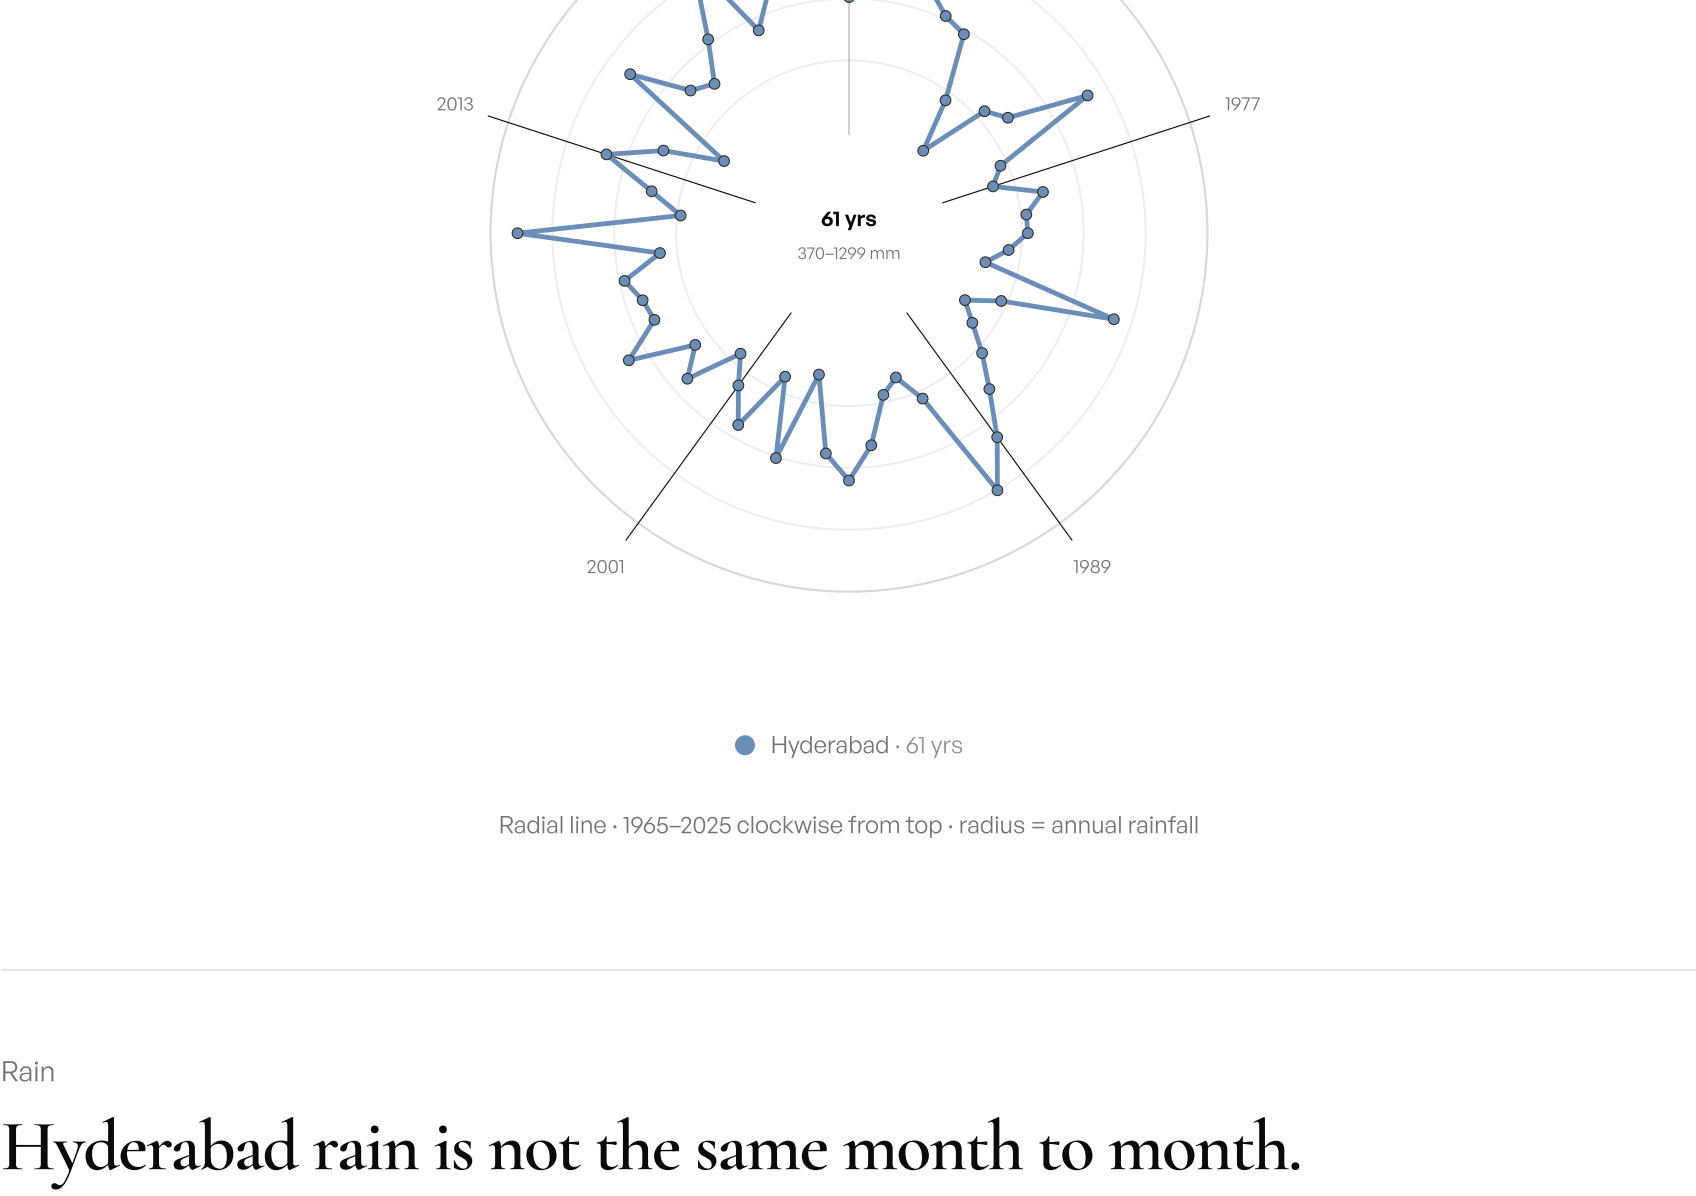

Across 61 years in Hyderabad, annual mean temperature rose 0.8°C from 1965 to 2025 — your warmest year so far was 1972.

Your orbit

Hyderabad, year by year.

A line chart wrapped round — each point is one year, distance from centre is how much it rained.

Rain

Hyderabad rain is not the same month to month.

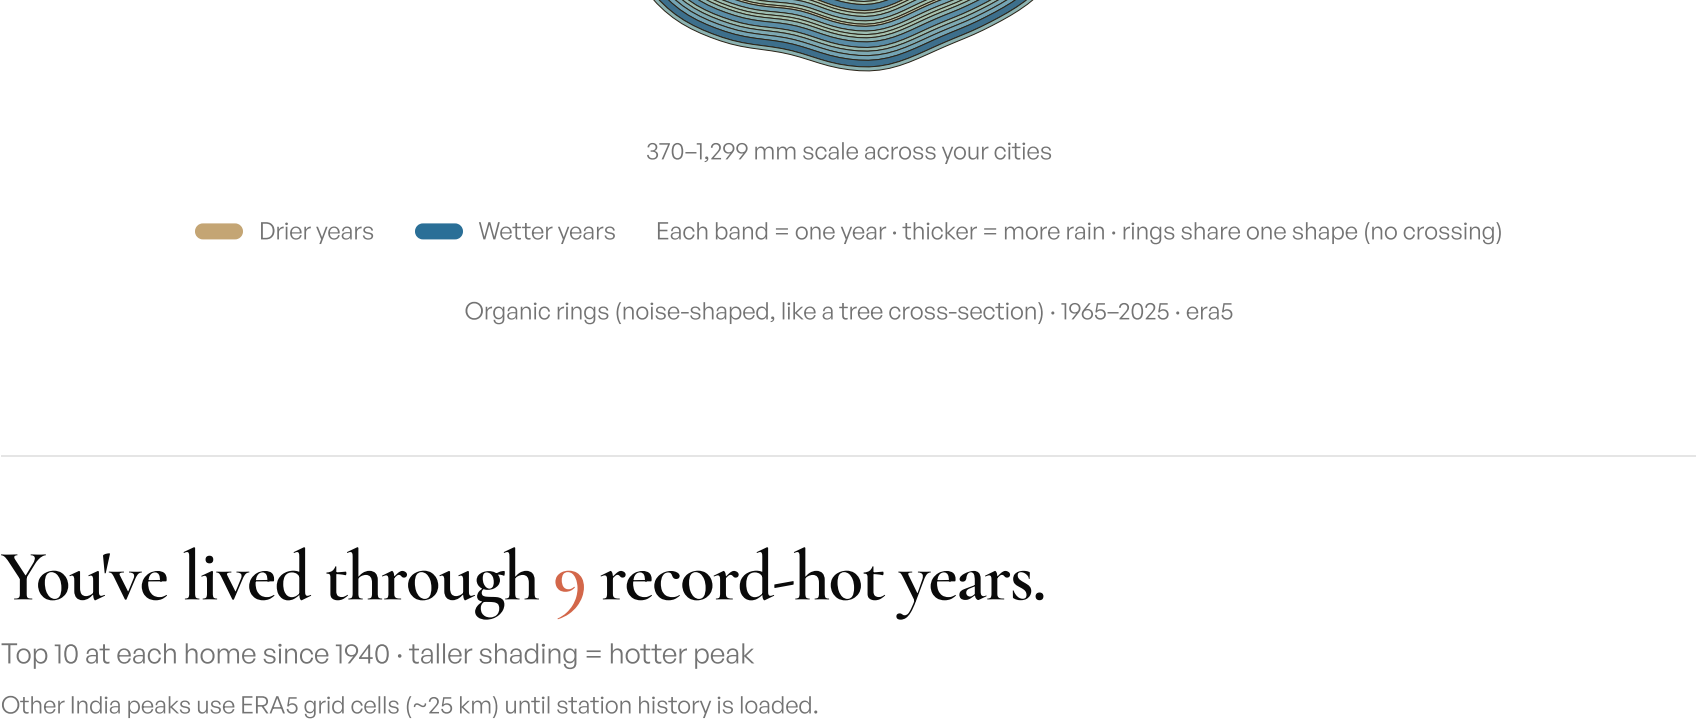

Biggest shift: July averages +54mm more rain per month now than during 1963–1967.

Rainfall memory

Wet and dry years in Hyderabad.

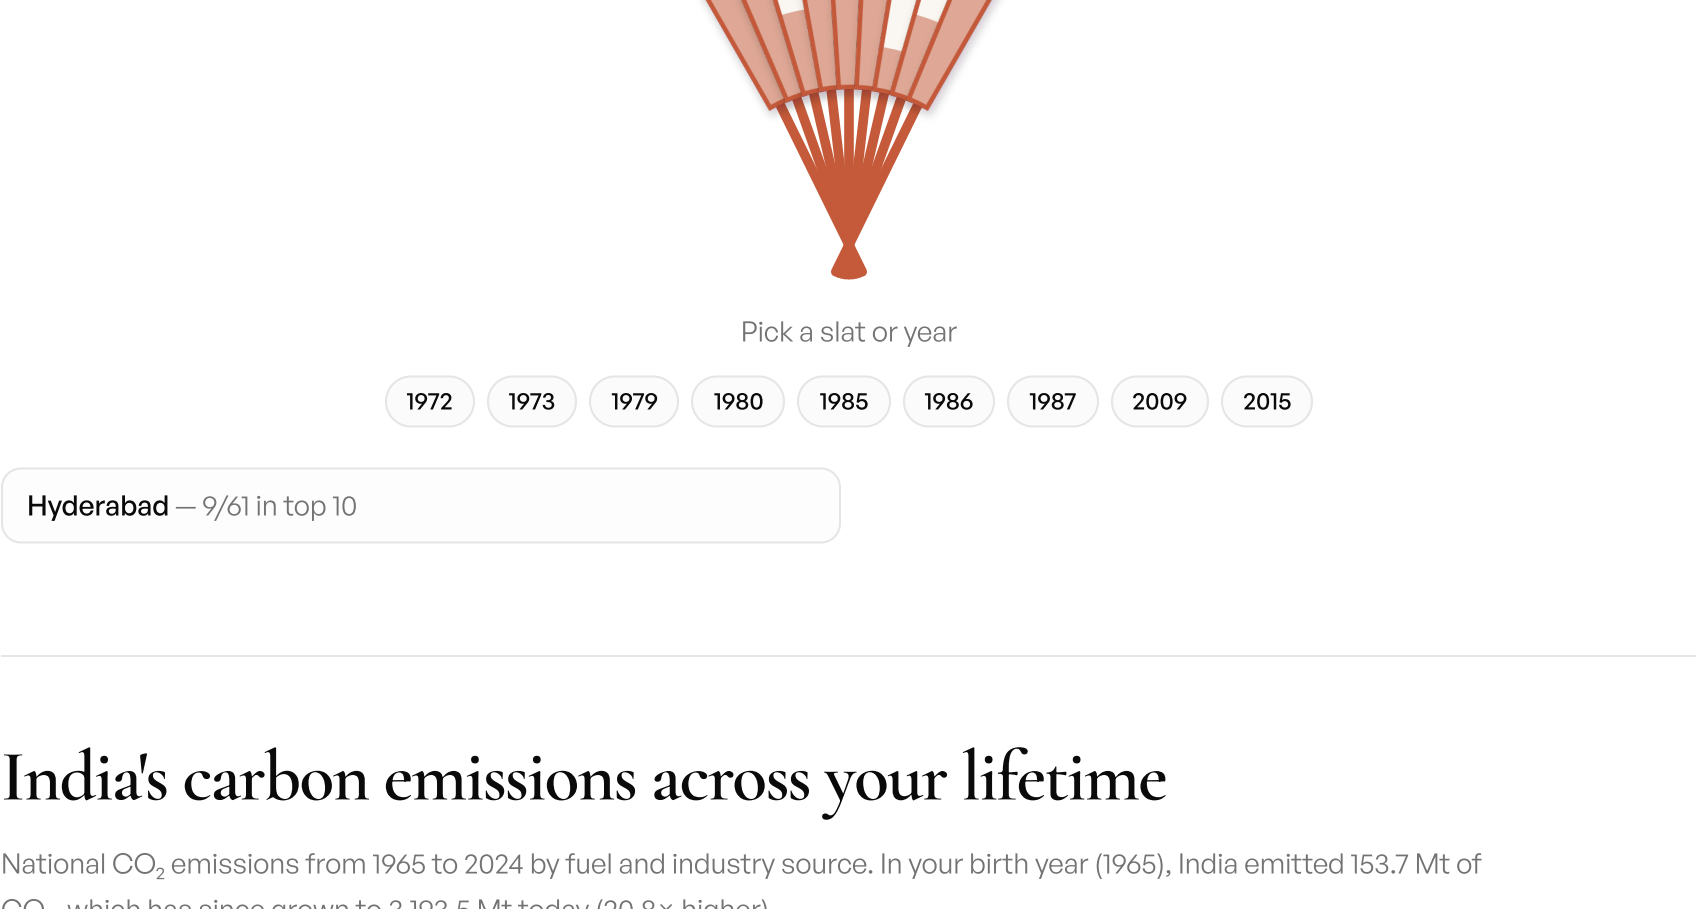

You lived through 61 rainy seasons there since 1965. 49% of those years were wetter than your own median — your soggiest was 2024 (1,299 mm), your driest 1972.

You've lived through 9 record-hot years.

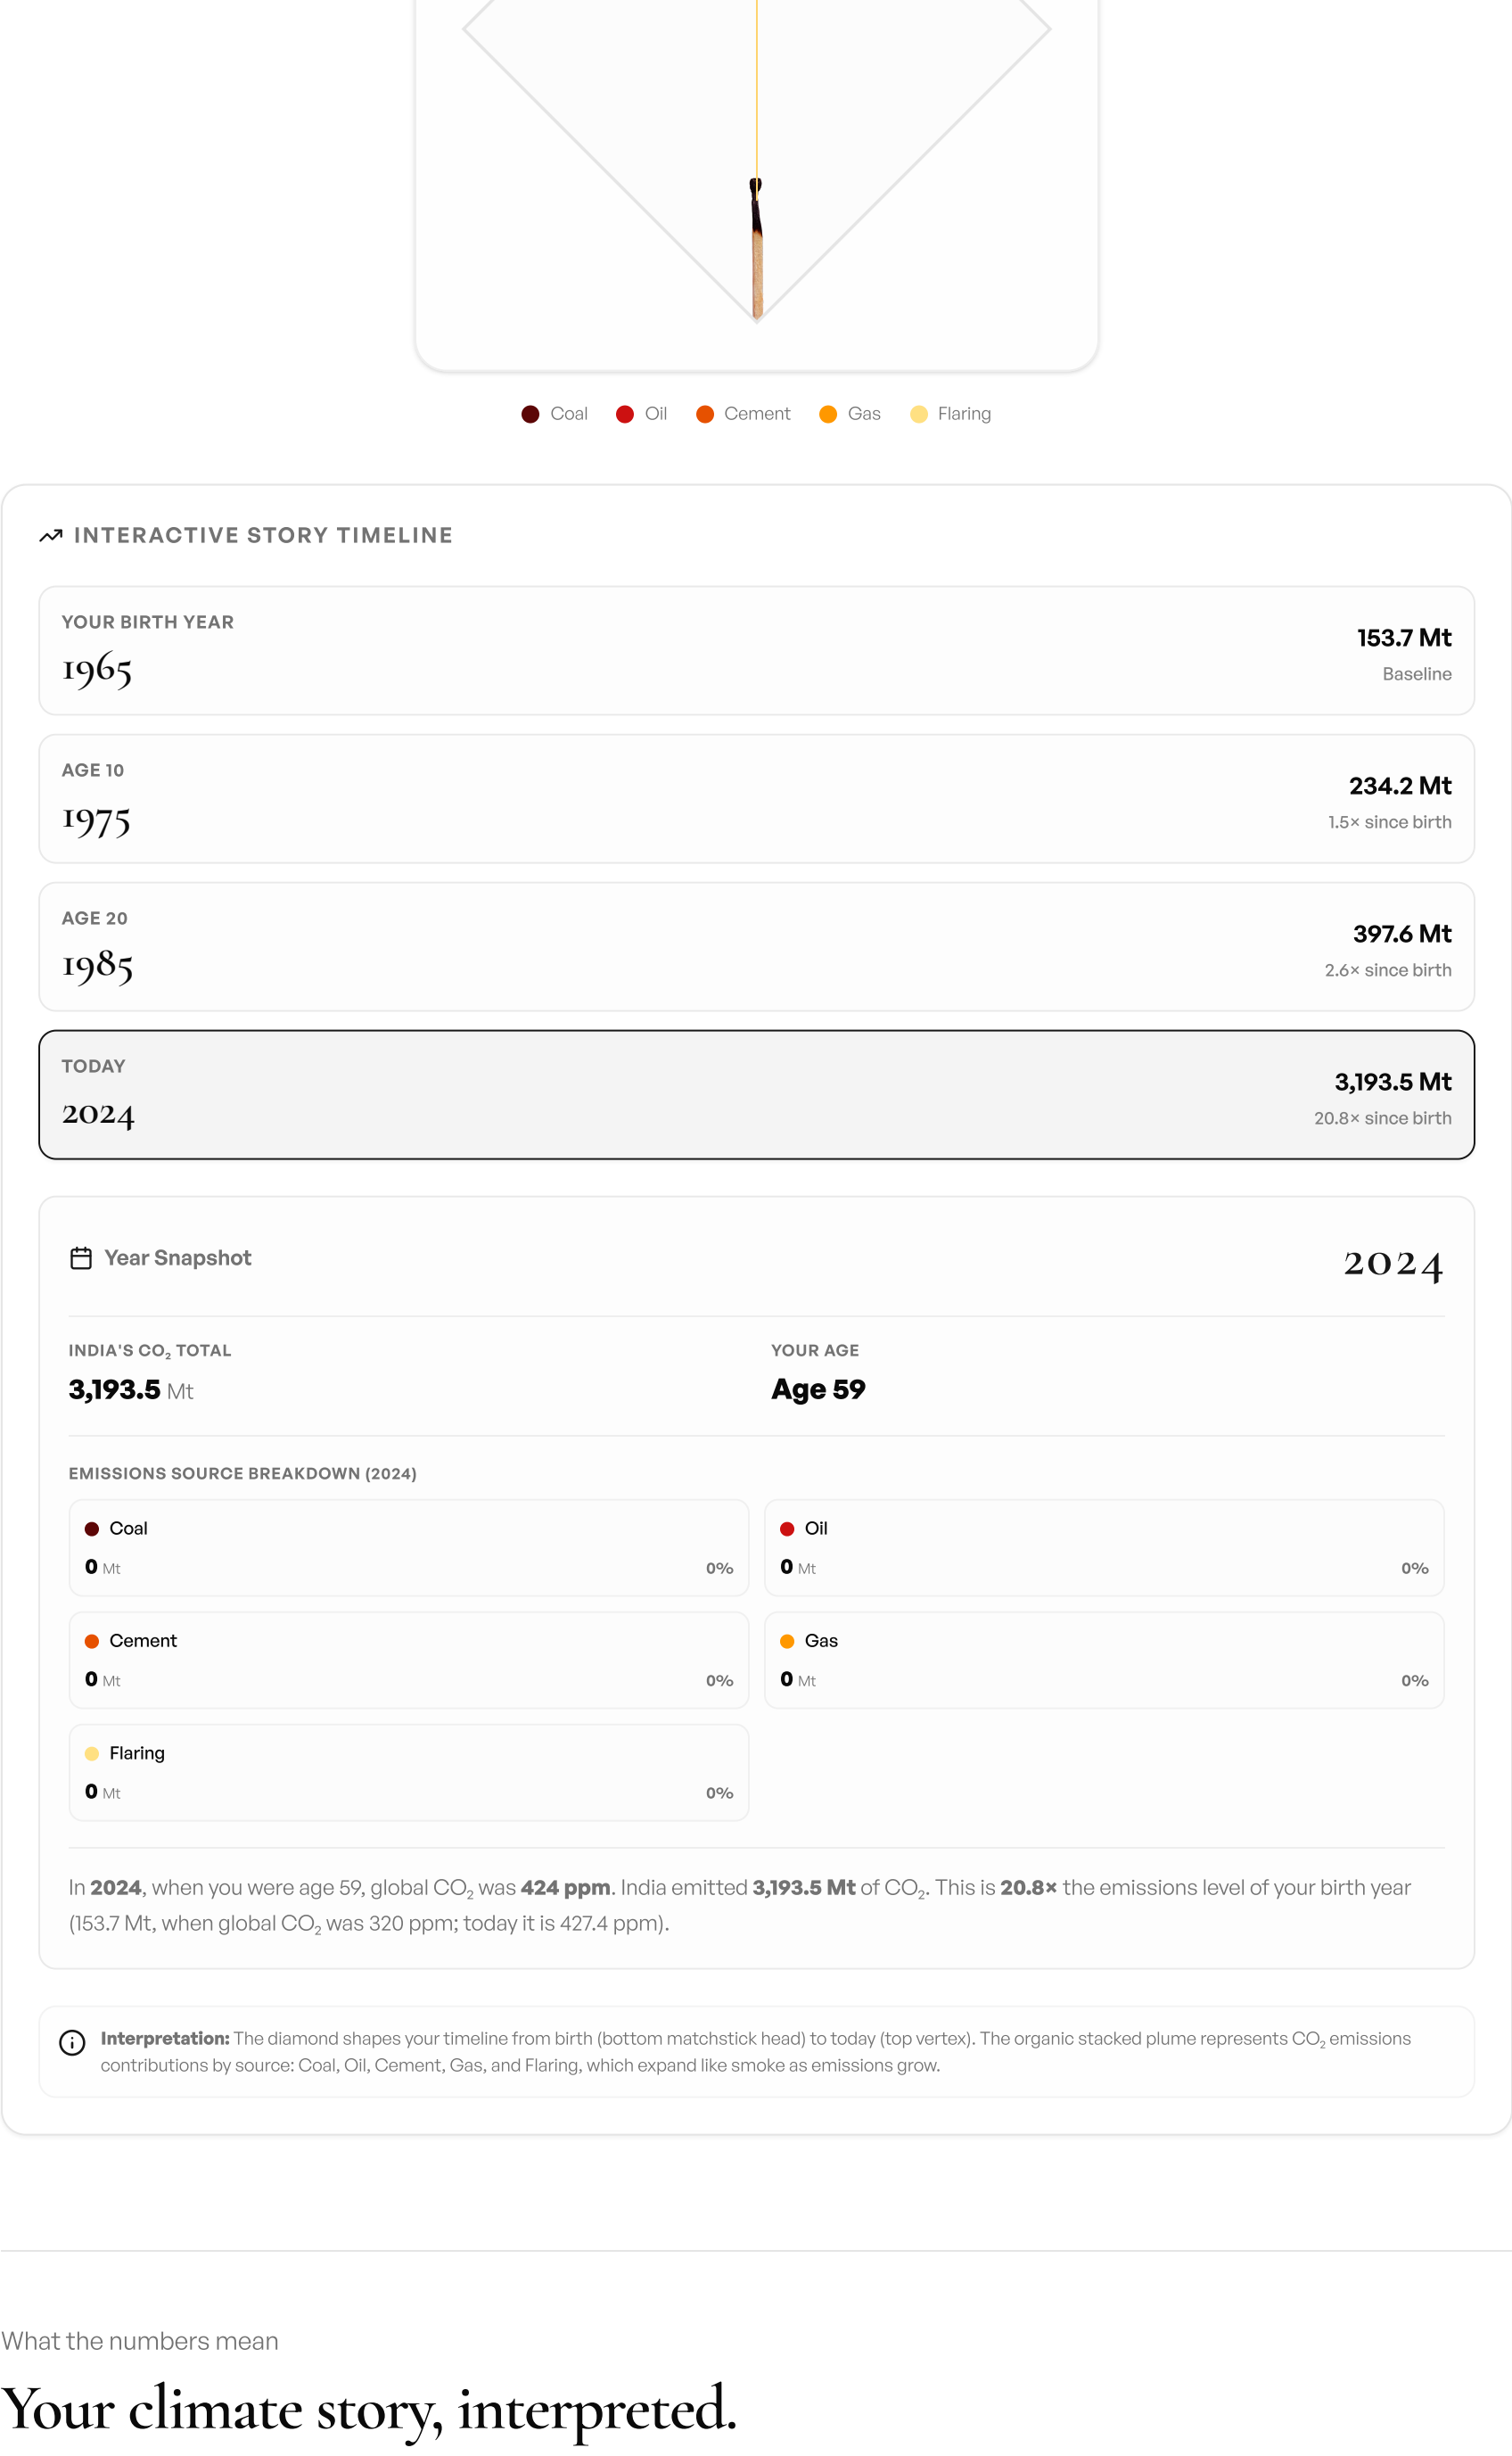

Top 10 at each home since 1940 - taller shading = hotter peak

Other India peaks use ERA5 grid cells (~25 km) until station history is loaded.

India's carbon emissions across your lifetime

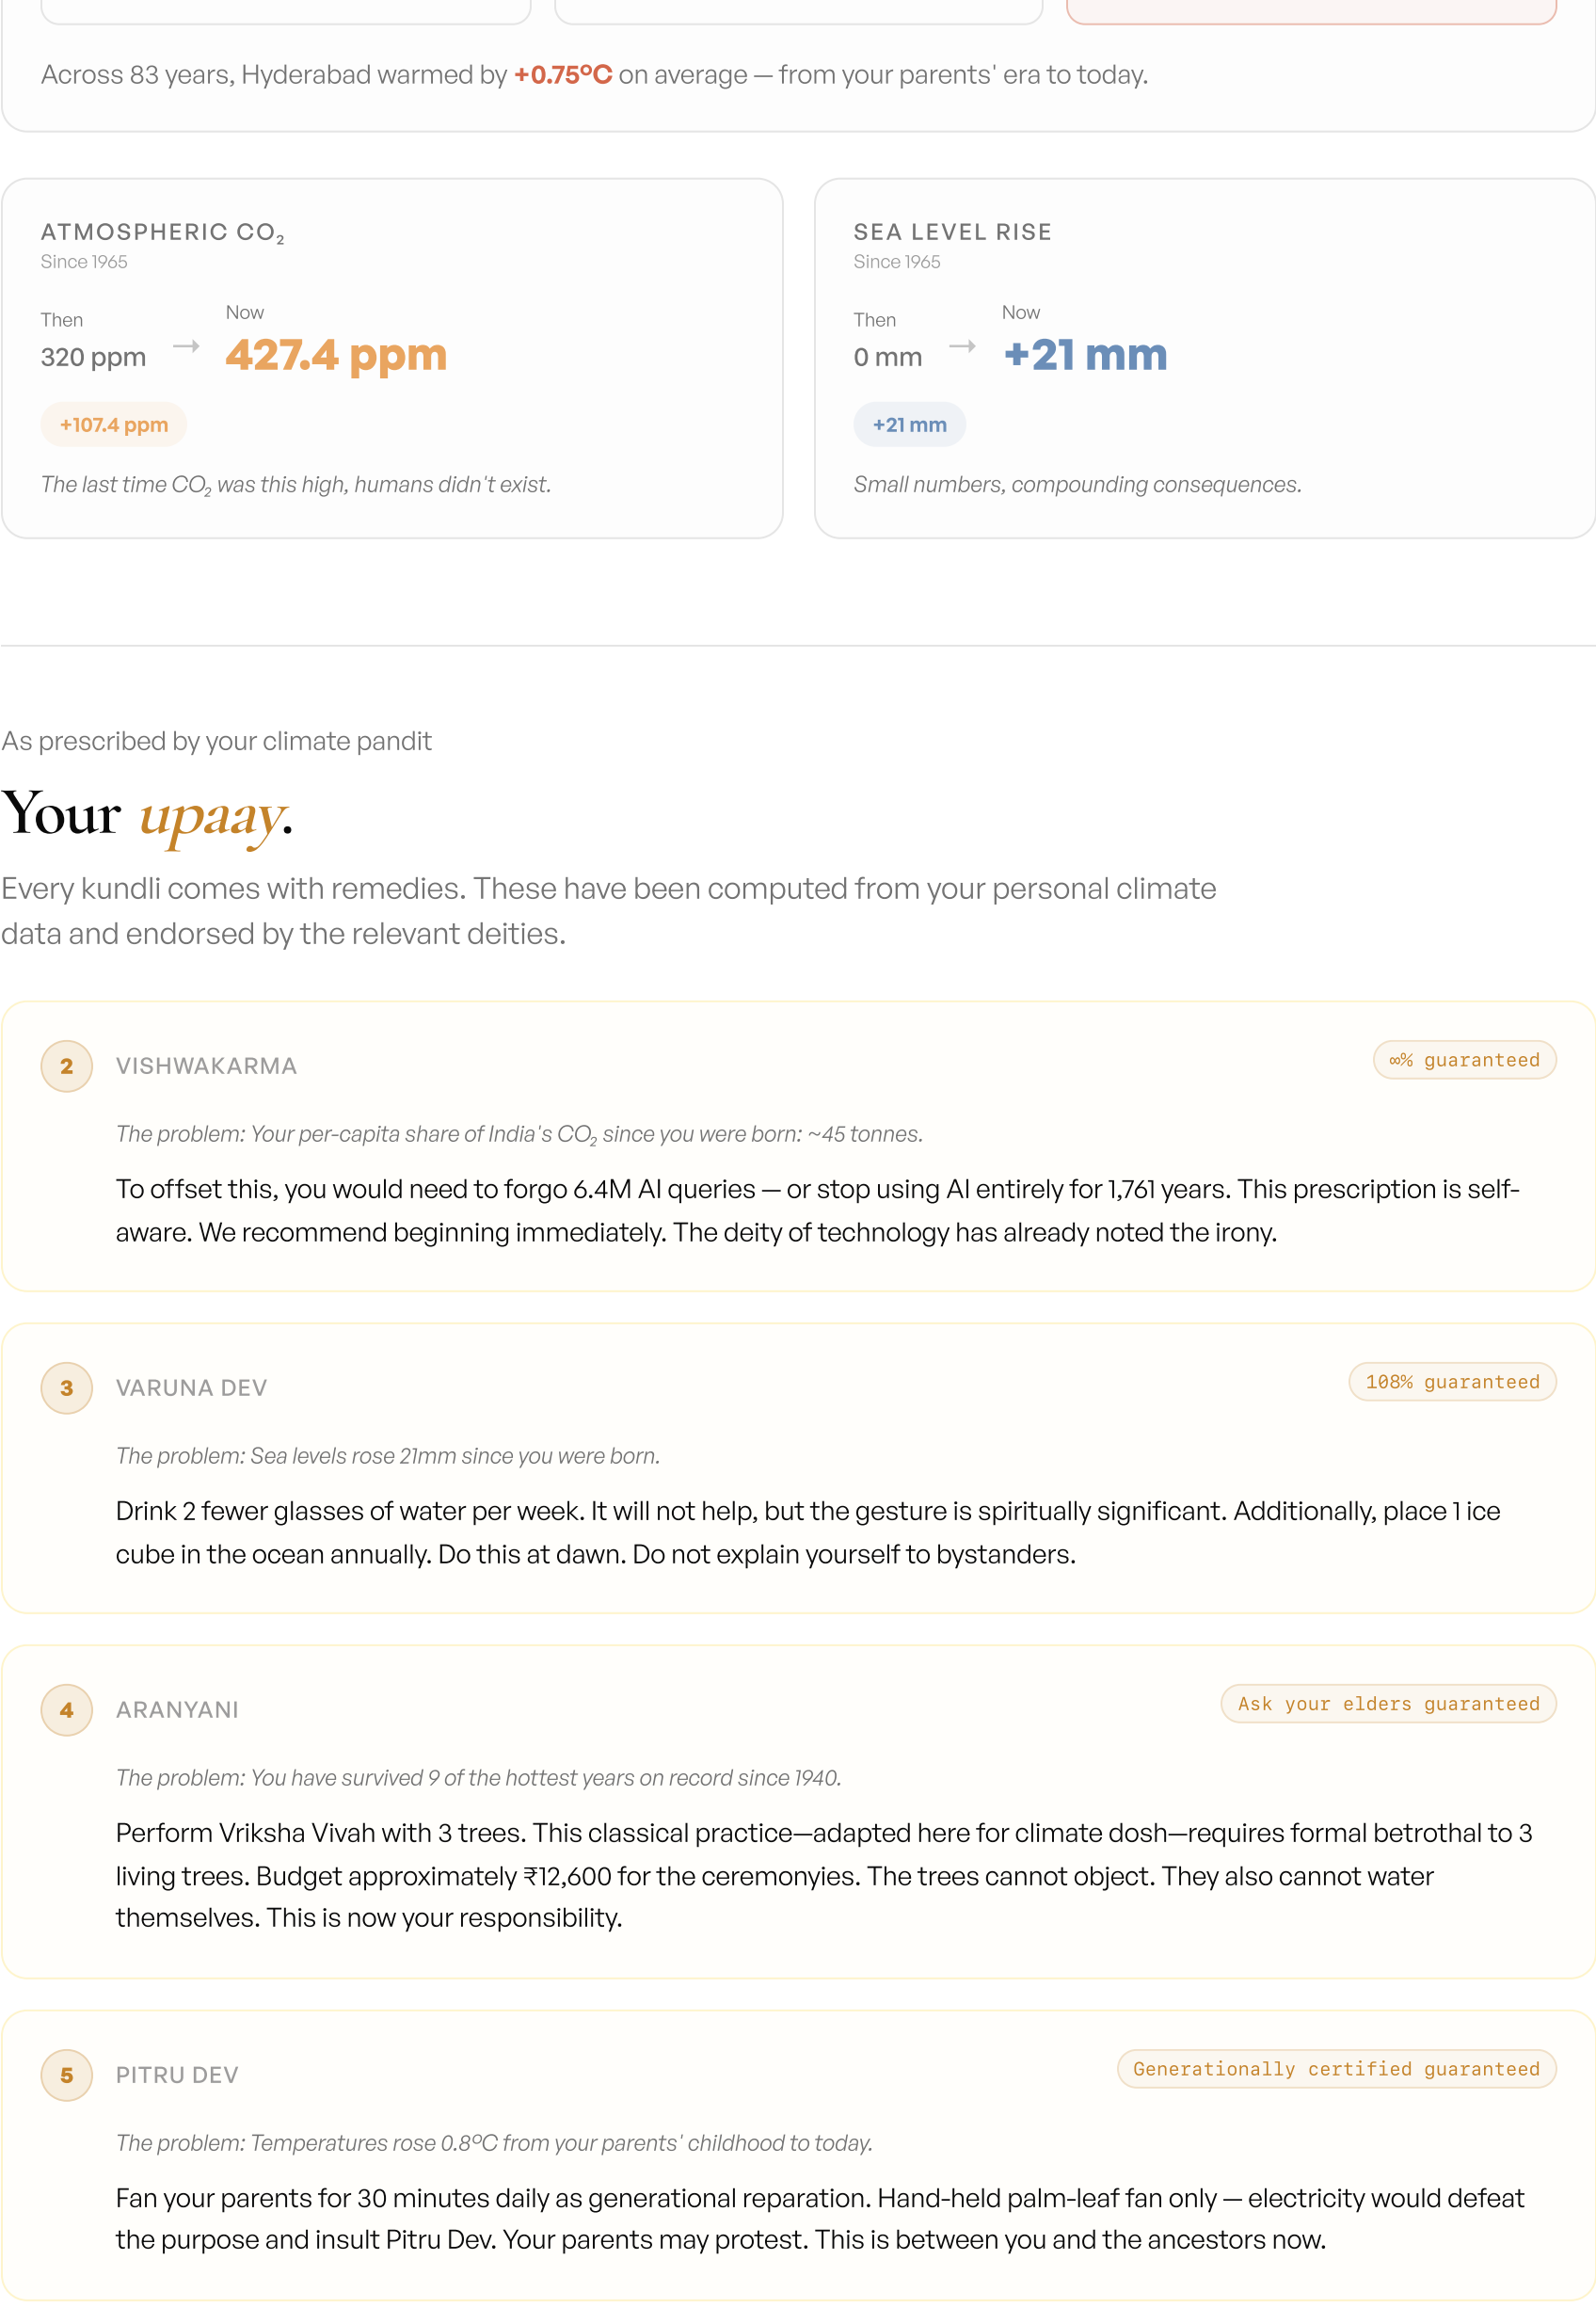

National CO₂ emissions from 1965 to 2024 by fuel and industry source. In your birth year (1965), India emitted 153.7 Mt of CO₂, which has since grown to 3,193.5 Mt today (20.8× higher).

What the numbers mean

Your climate story, interpreted.

Numbers alone don't tell the story. Here's what changed across three generations in Hyderabad.

* These remedies are satirical and scientifically non-binding. Your actual carbon footprint requires less theatrical and more structural intervention.
