

How does your childhood compare to the climate of today?

Kanpur bucked the trend.

An average January now runs 1.7°C cooler than during 1988–1992.

Your climate trail

The air got warmer year by year.

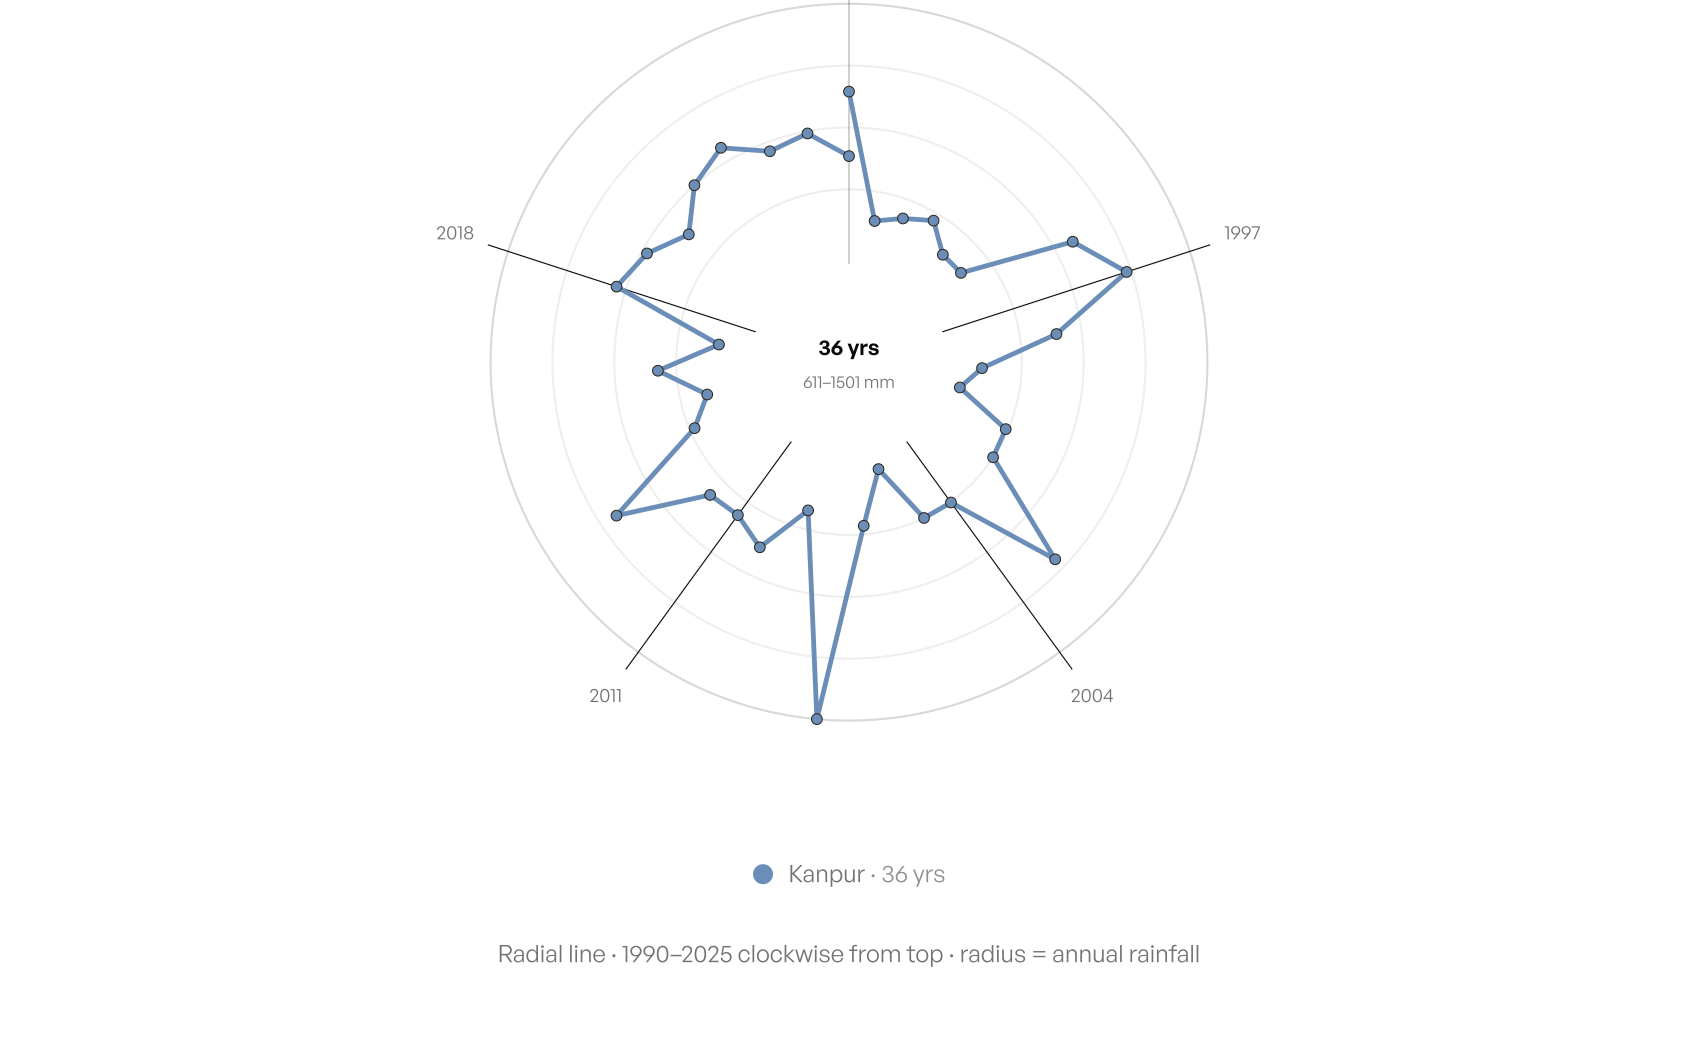

Across 36 years in Kanpur, annual mean temperature rose 1.0°C from 1990 to 2025 — your warmest year so far was 2010.

Your orbit

Kanpur, year by year.

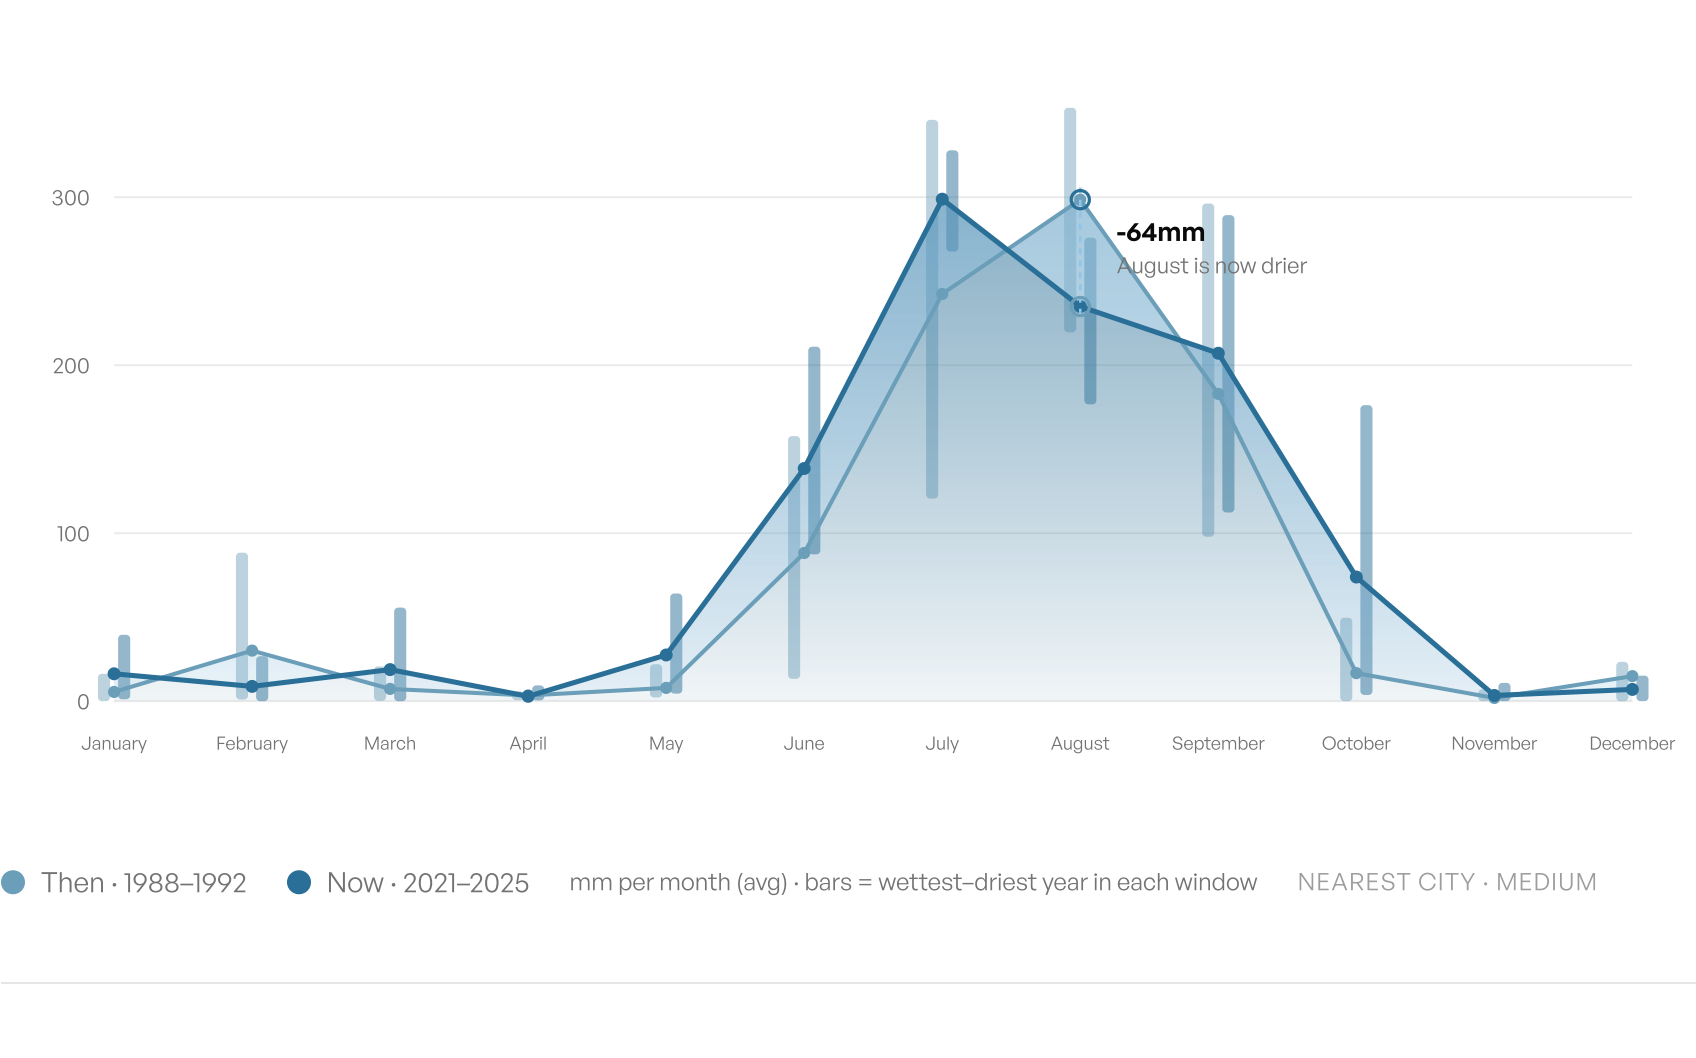

A line chart wrapped round — each point is one year, distance from centre is how much it rained.

Rain

Your monsoon rhythm shifted.

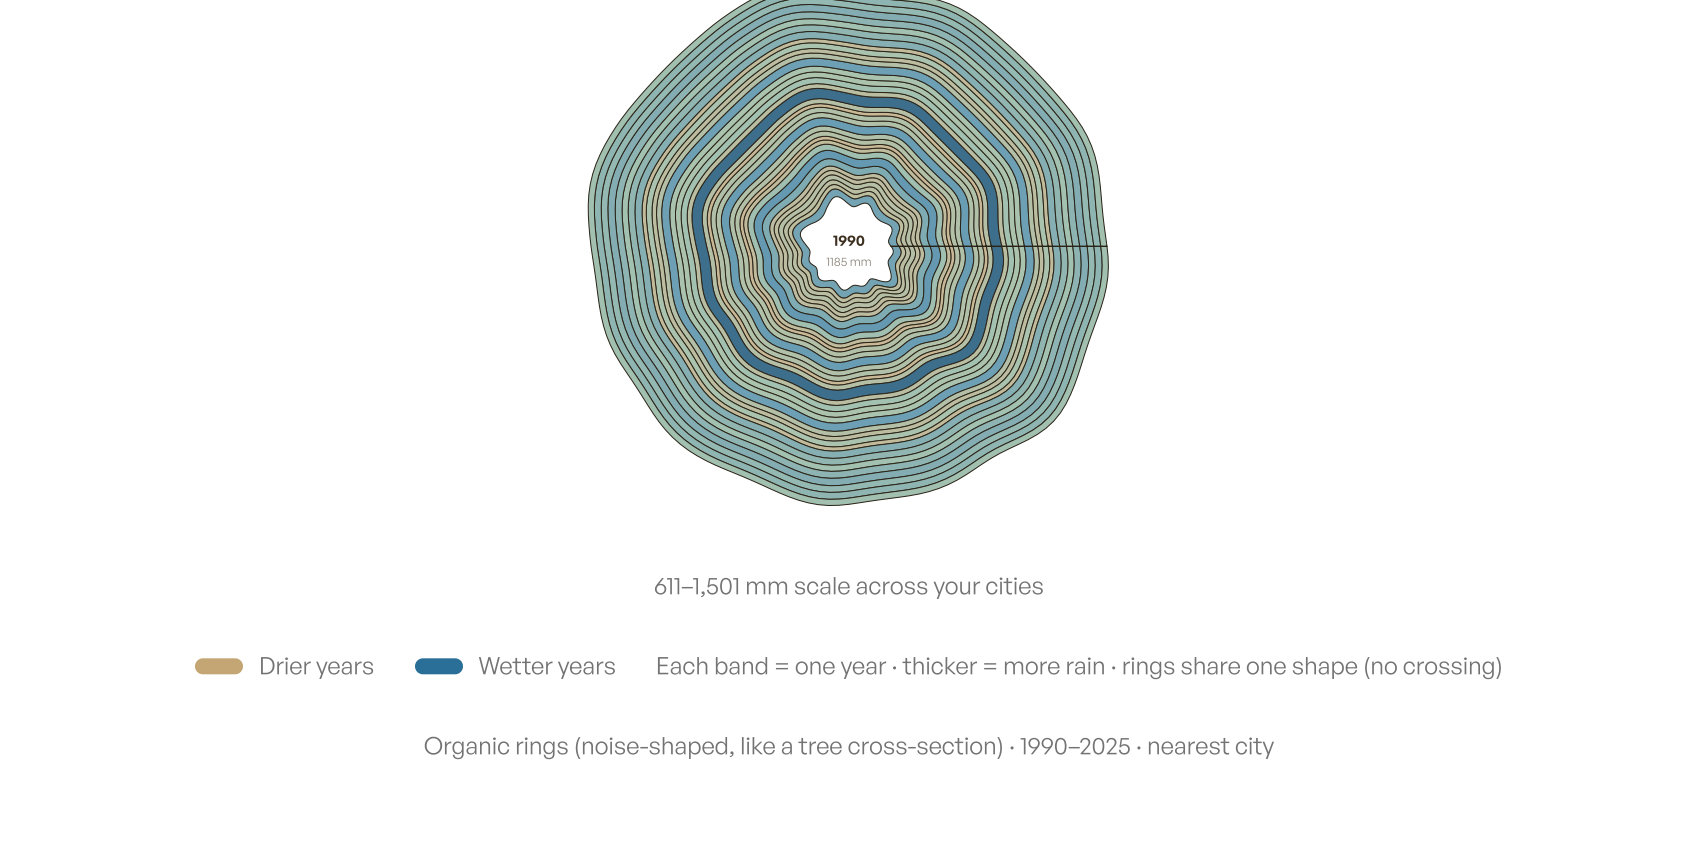

June–September rainfall at Kanpur is about 8% wetter now than during 1988–1992.

Rainfall memory

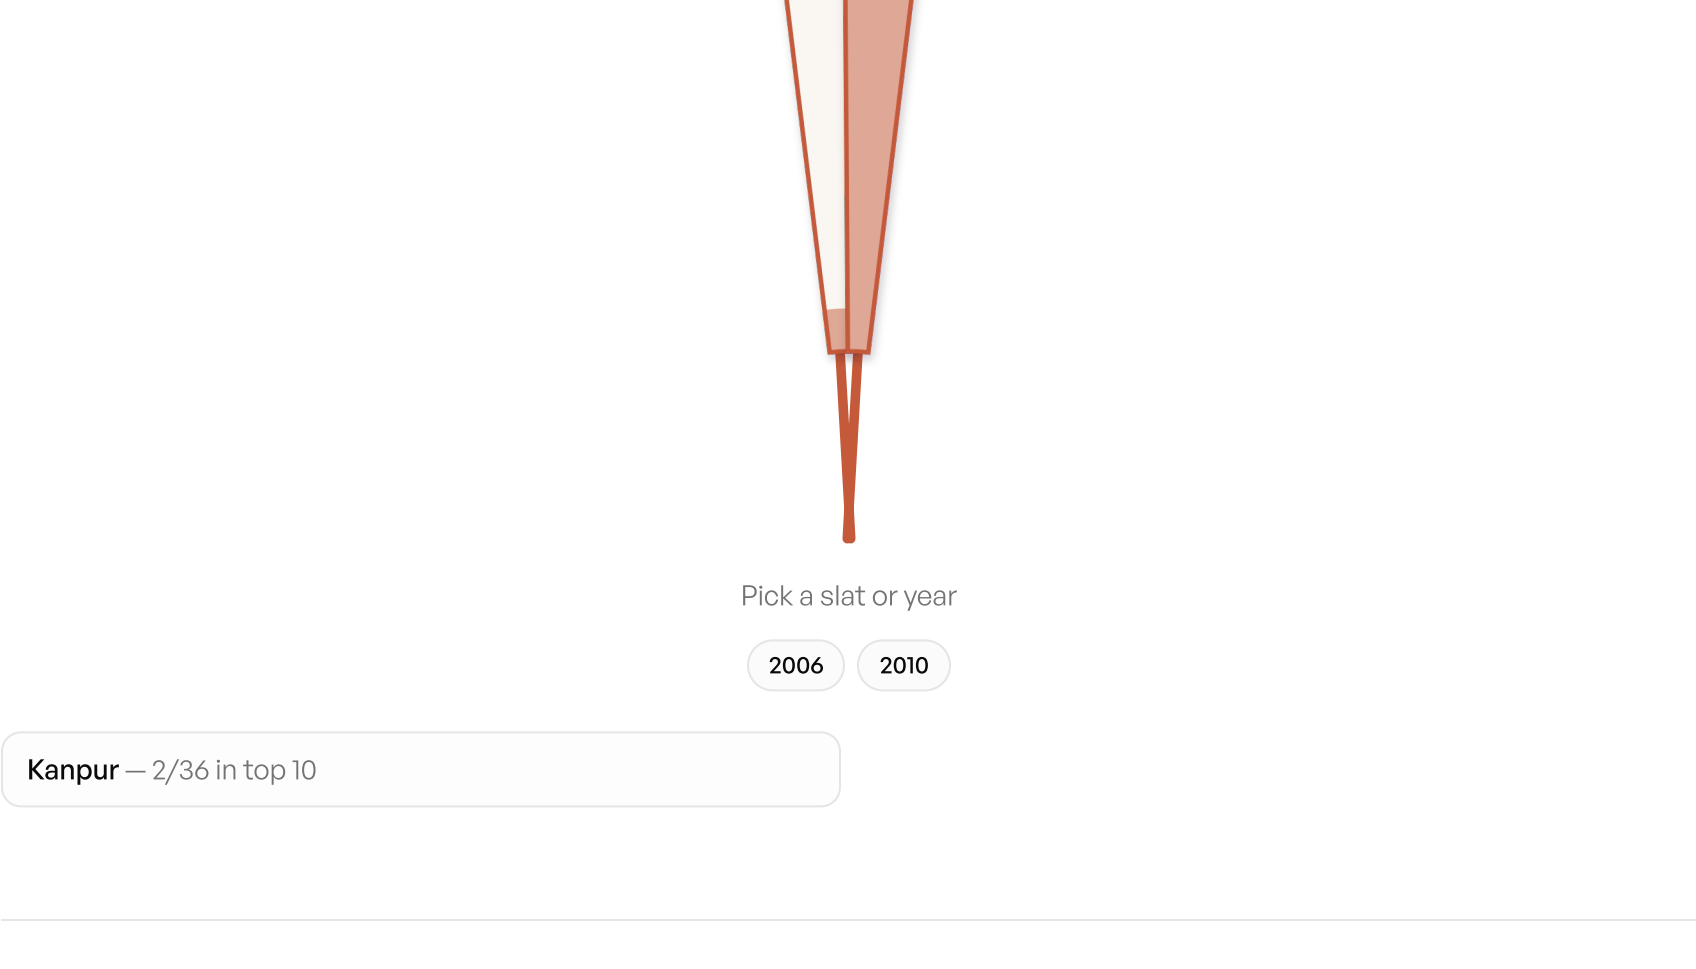

Wet and dry years in Kanpur.

You lived through 36 rainy seasons there since 1990. 50% of those years were wetter than your own median — your soggiest was 2008 (1,501 mm), your driest 2006.

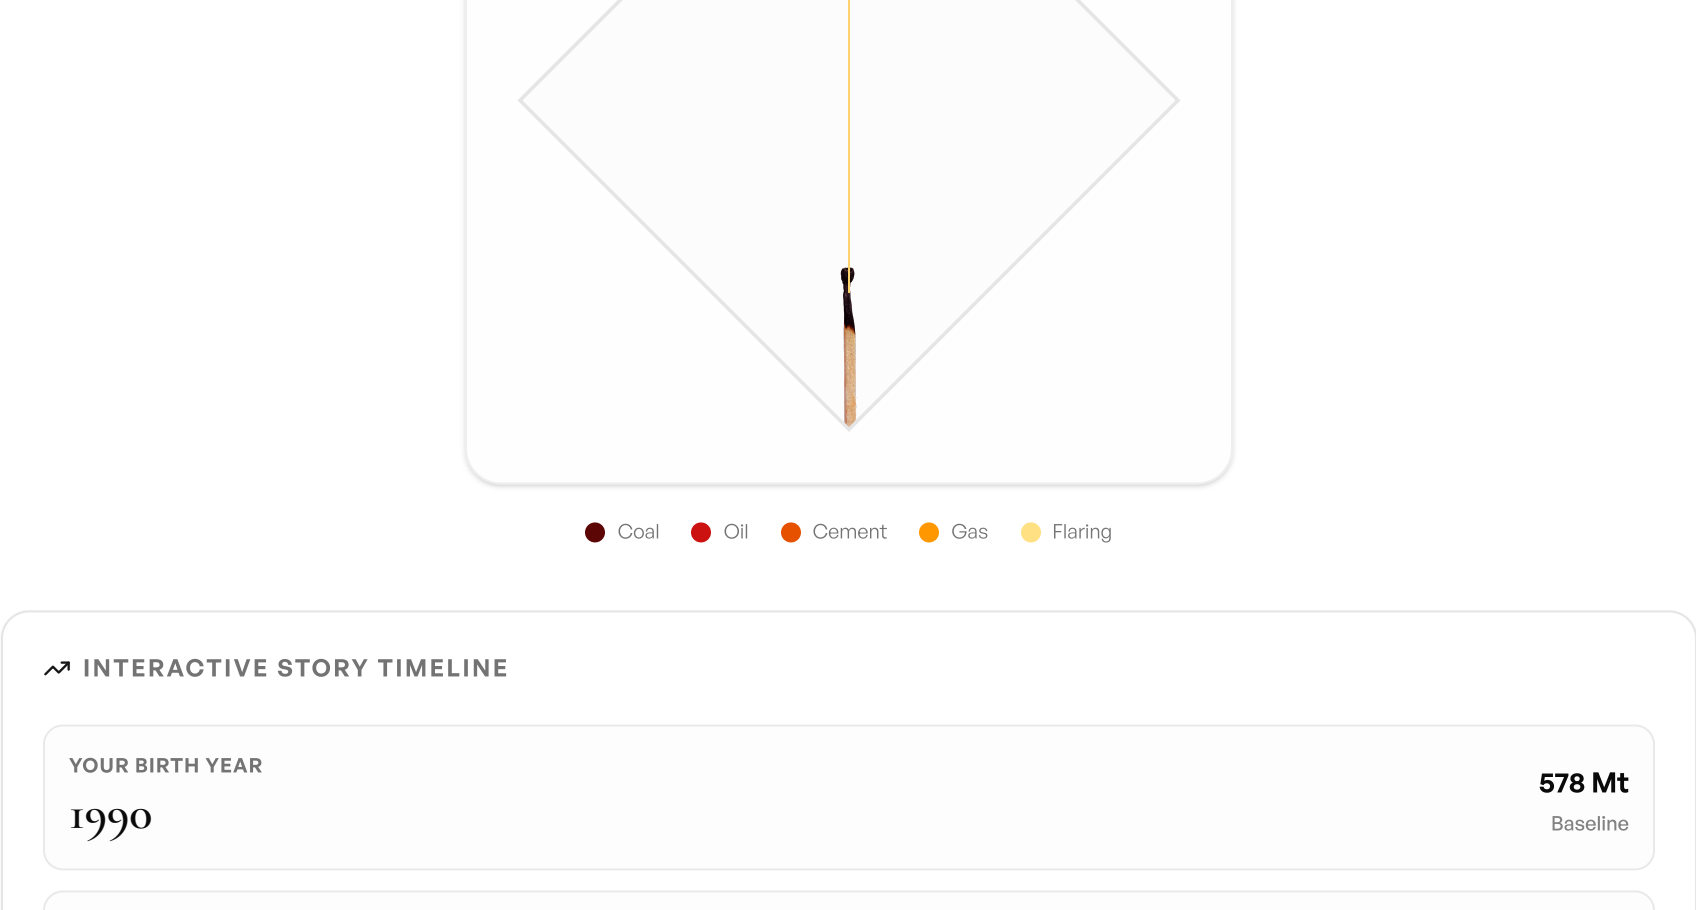

You've lived through 2 record-hot years.

Top 10 at each home since 1940 - taller shading = hotter peak
Other India peaks use ERA5 grid cells (~25 km) until station history is loaded.

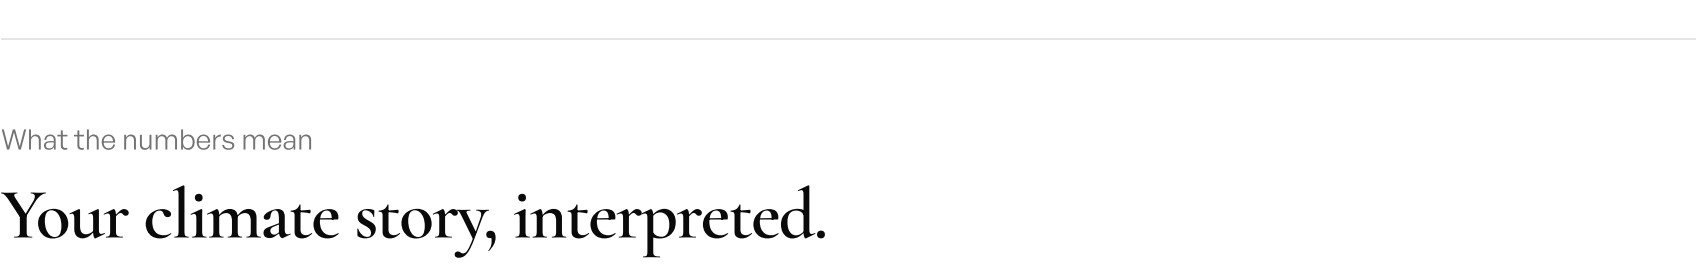

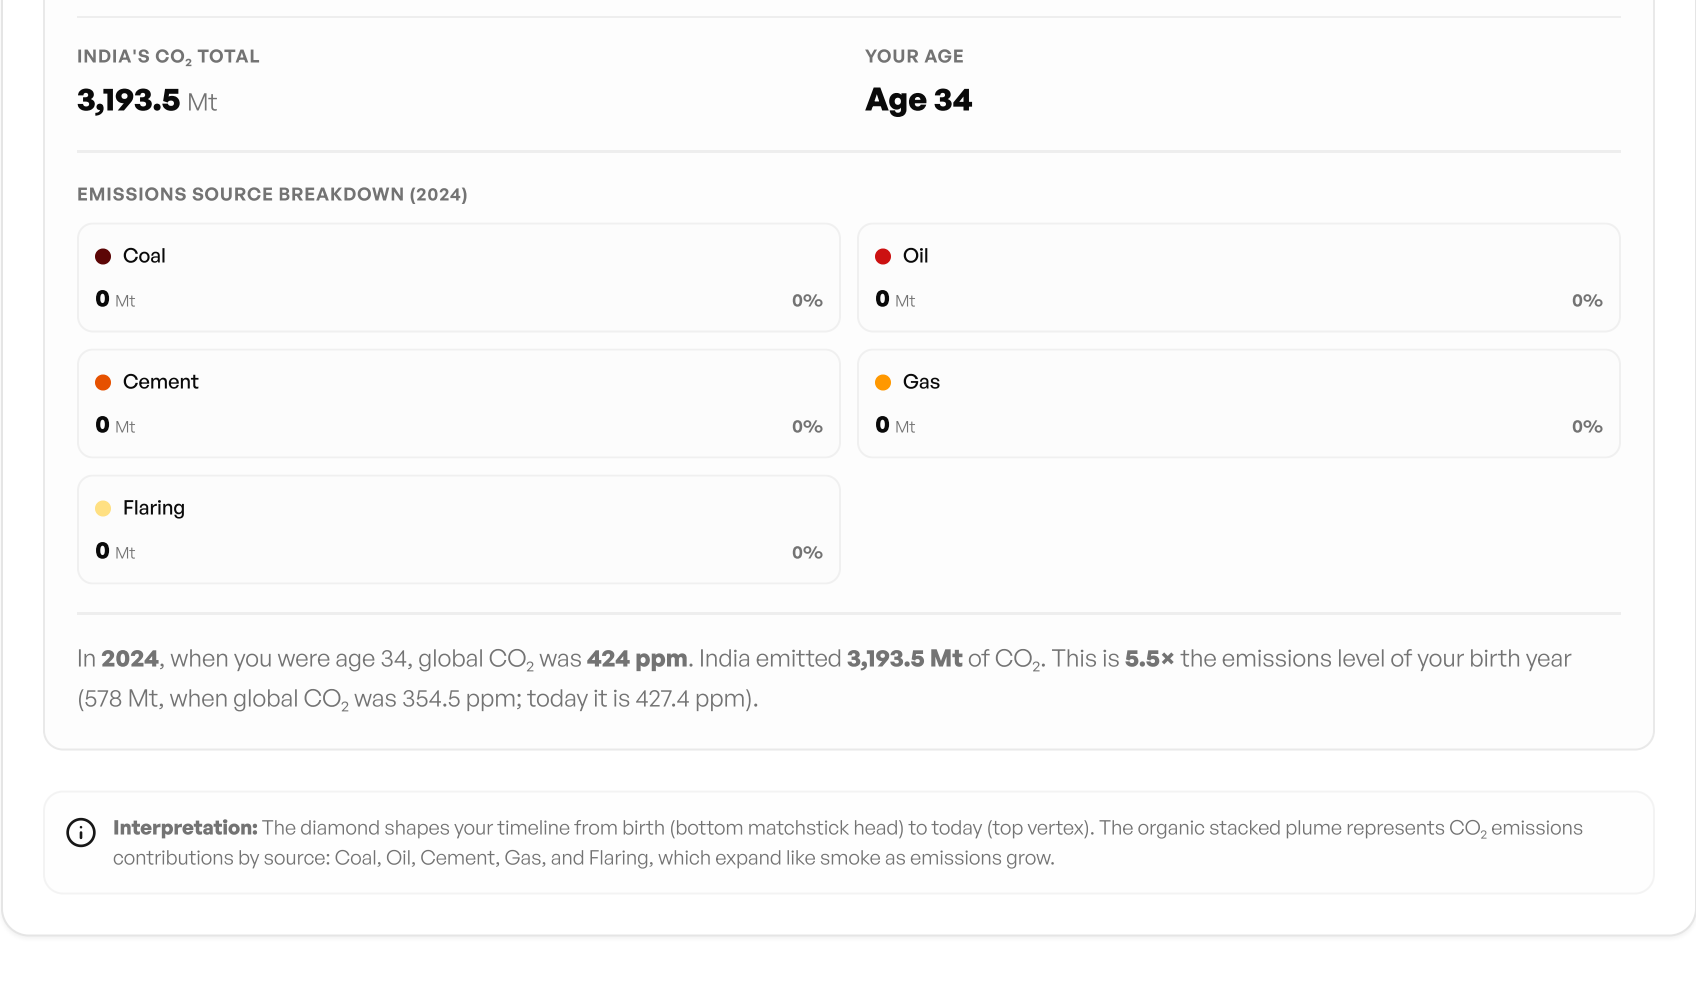

India's carbon emissions across your lifetime

National CO₂ emissions from 1990 to 2024 by fuel and industry source. In your birth year (1990), India emitted 578 Mt of CO₂, which has since grown to 3,193.5 Mt today (5.5× higher).

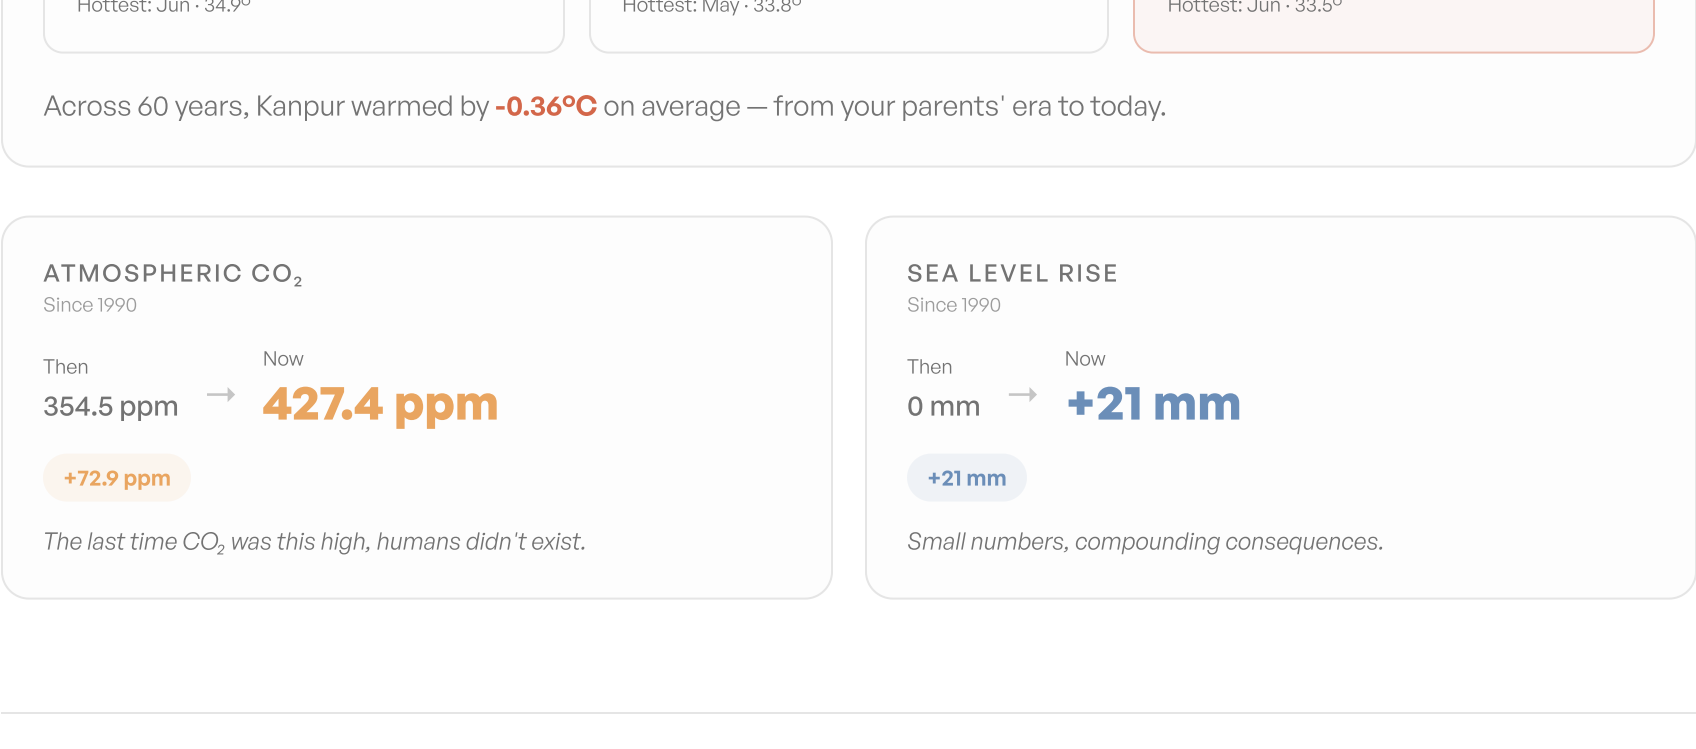

INTERACTIVE STORY TIMELINE

What the numbers mean

Your climate story, interpreted.

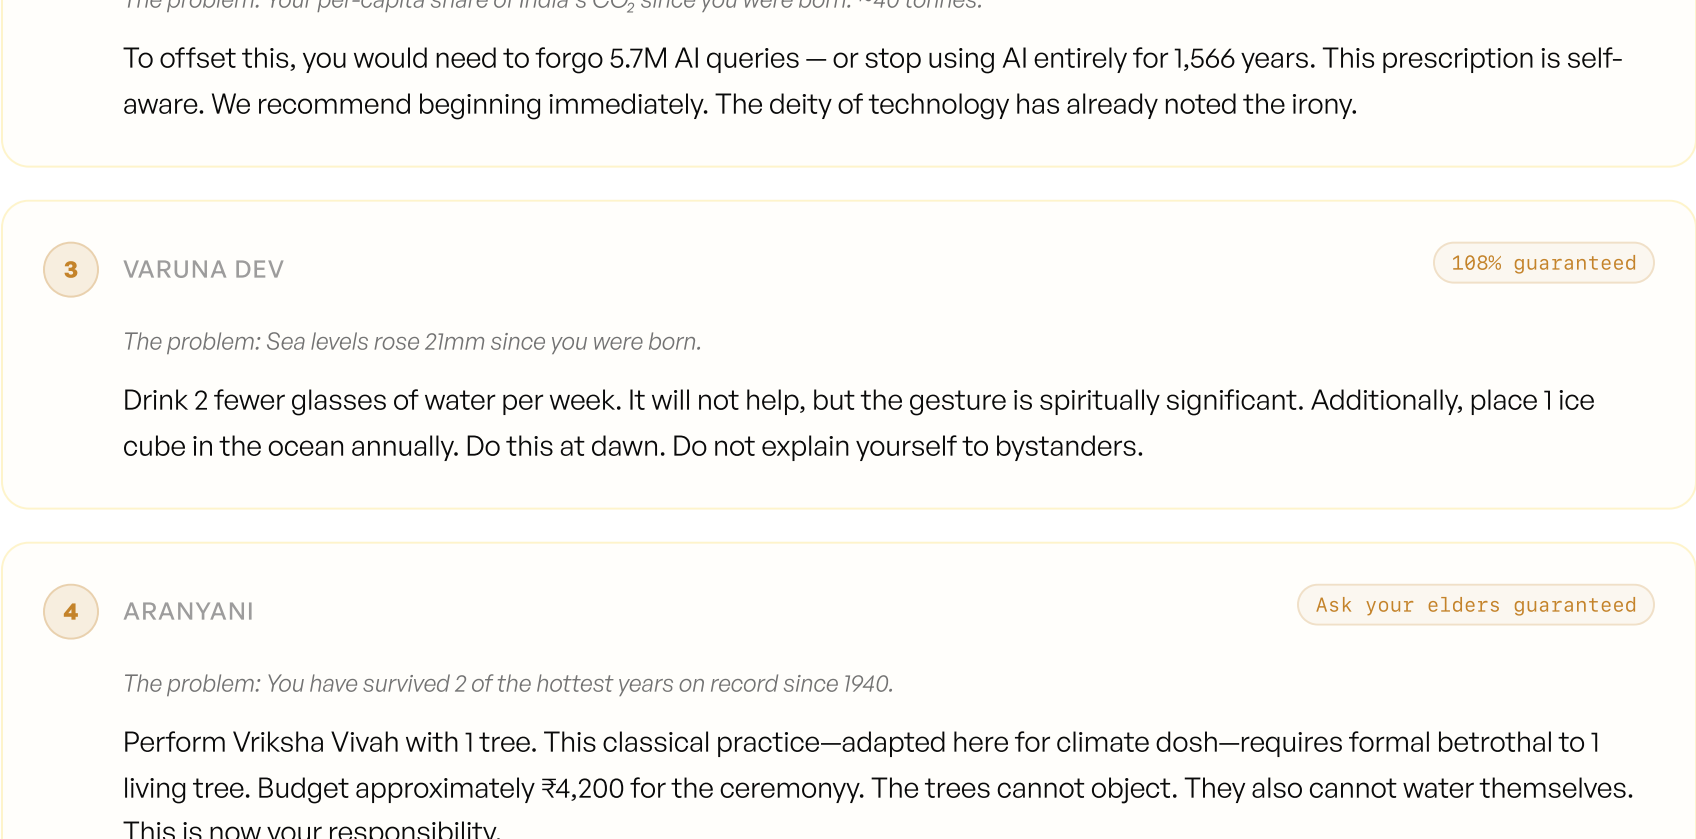

Numbers alone don't tell the story. Here's what changed across three generations in Kanpur.

As prescribed by your climate pandit

Your *upaay*.

Every kundli comes with remedies. These have been computed from your personal climate data and endorsed by the relevant deities.

* These remedies are satirical and scientifically non-binding. Your actual carbon footprint requires less theatrical and more structural intervention.
