

How does your childhood compare to the climate of today?

New Delhi bucked the trend.

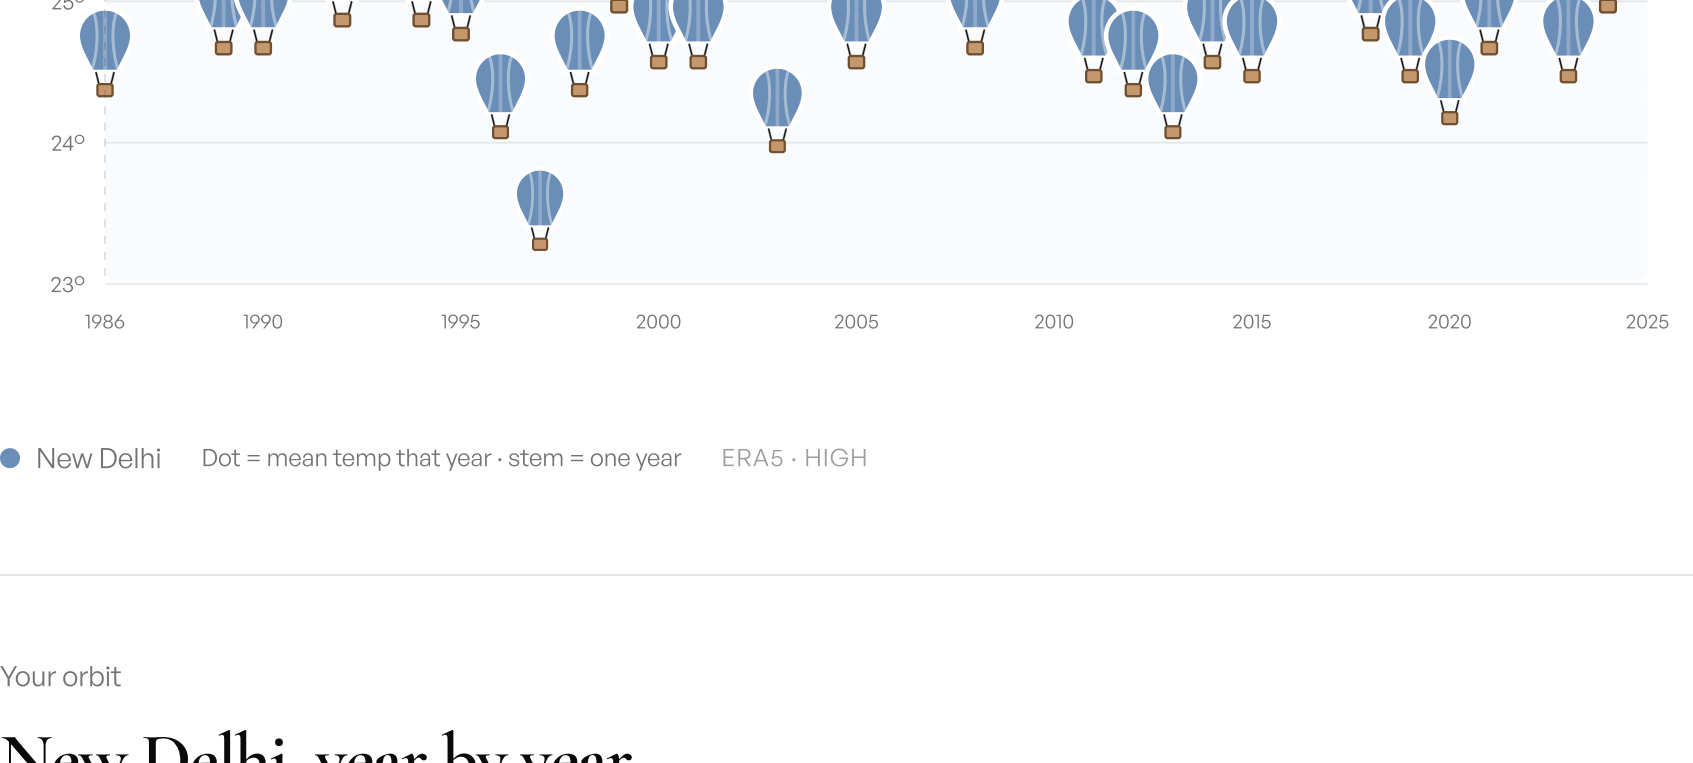

An average June now runs 1.5°C cooler than during 1984–1988.

Your climate trail

The air got warmer year by year.

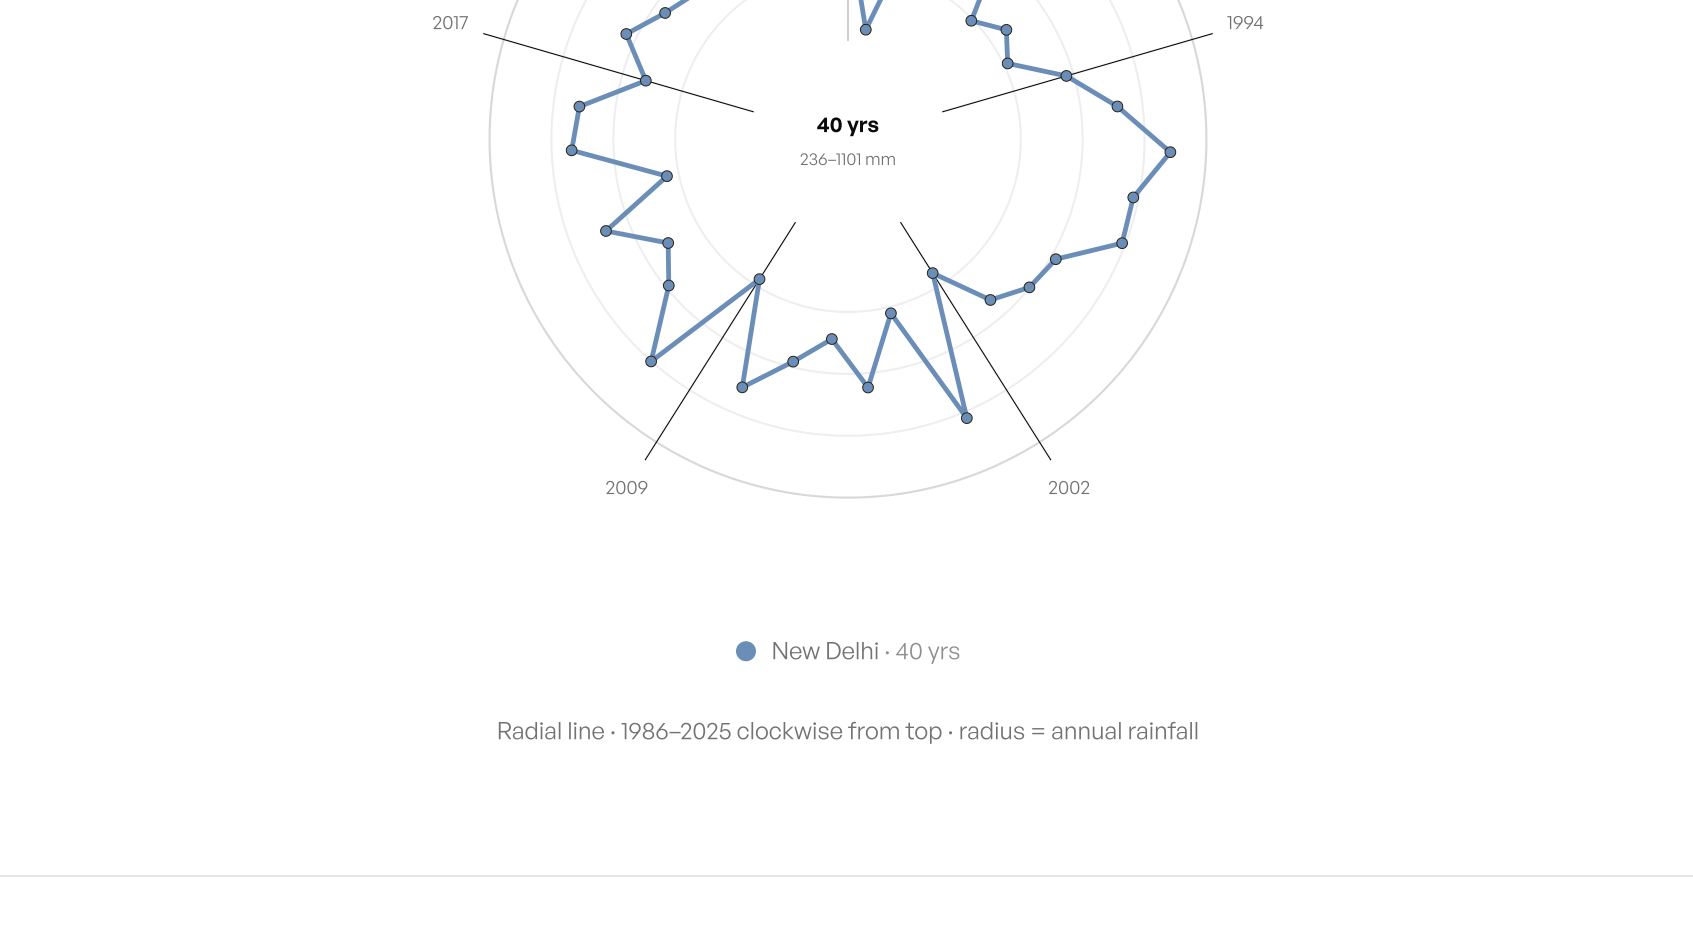

Across 40 years in New Delhi, annual mean temperature rose 1.0°C from 1986 to 2025 — your warmest year so far was 1987.

Your orbit

New Delhi, year by year.

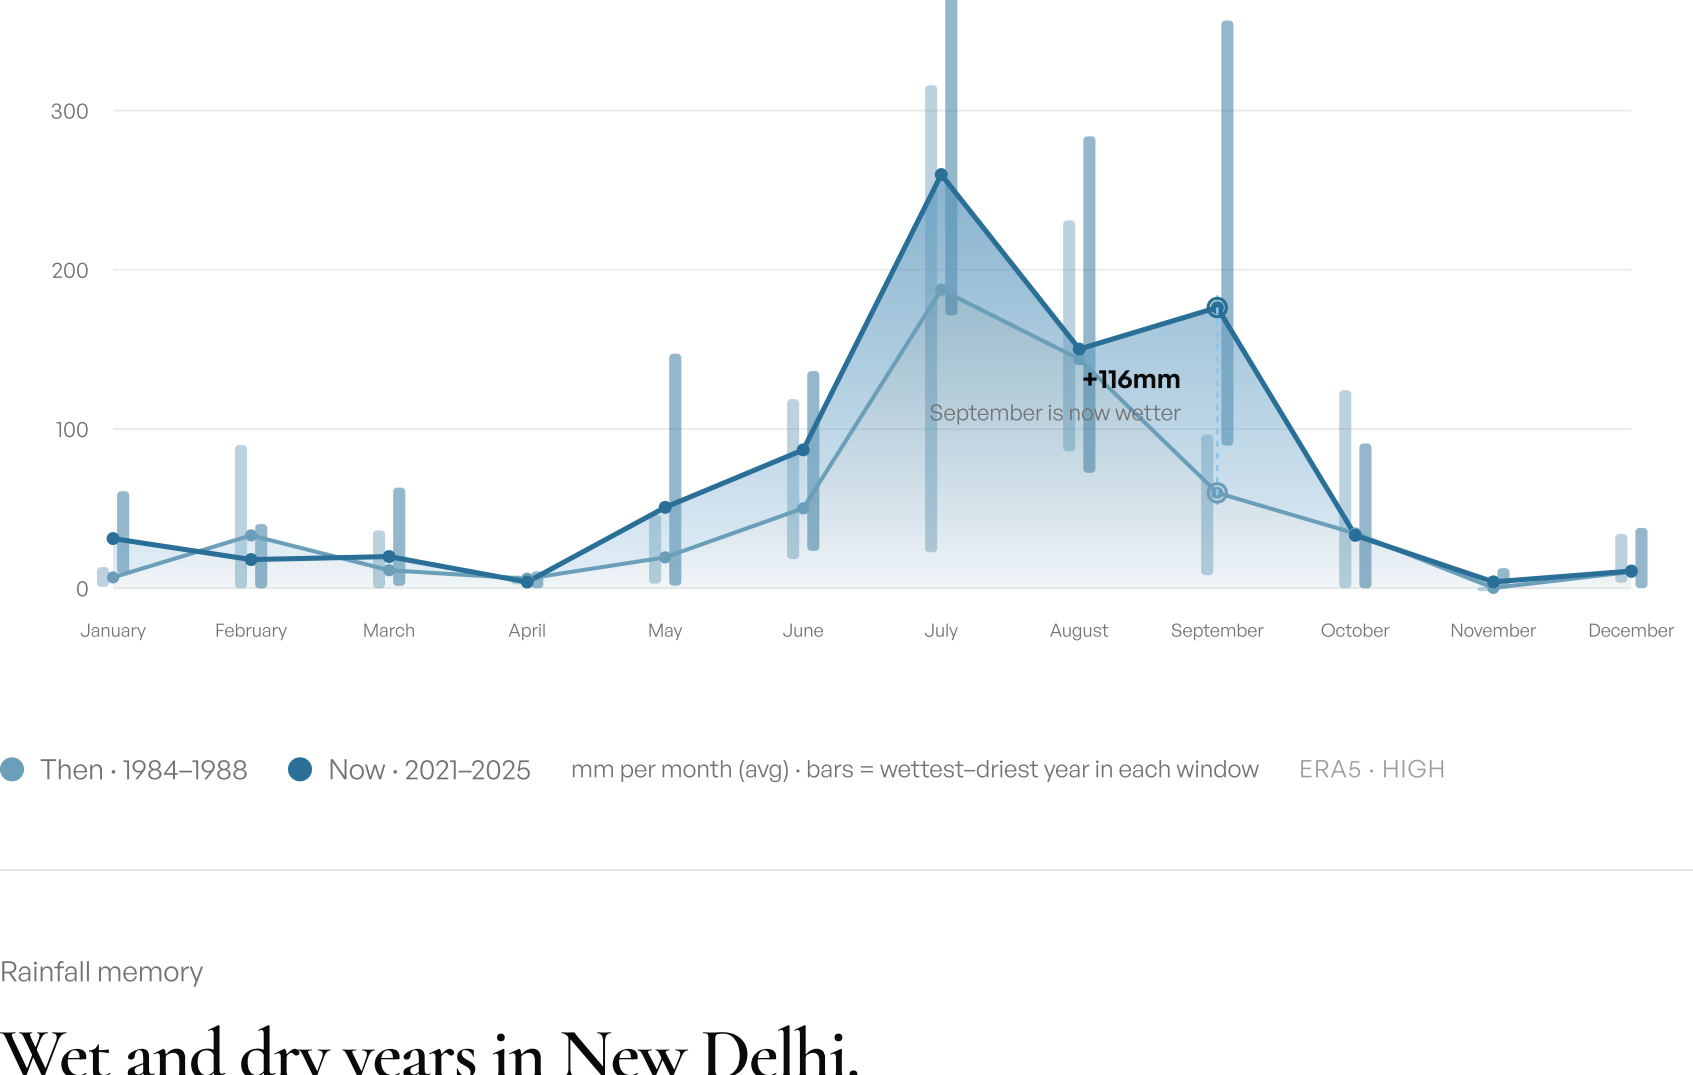

A line chart wrapped round — each point is one year, distance from centre is how much it rained.

Rain

Downpours are stacking up.

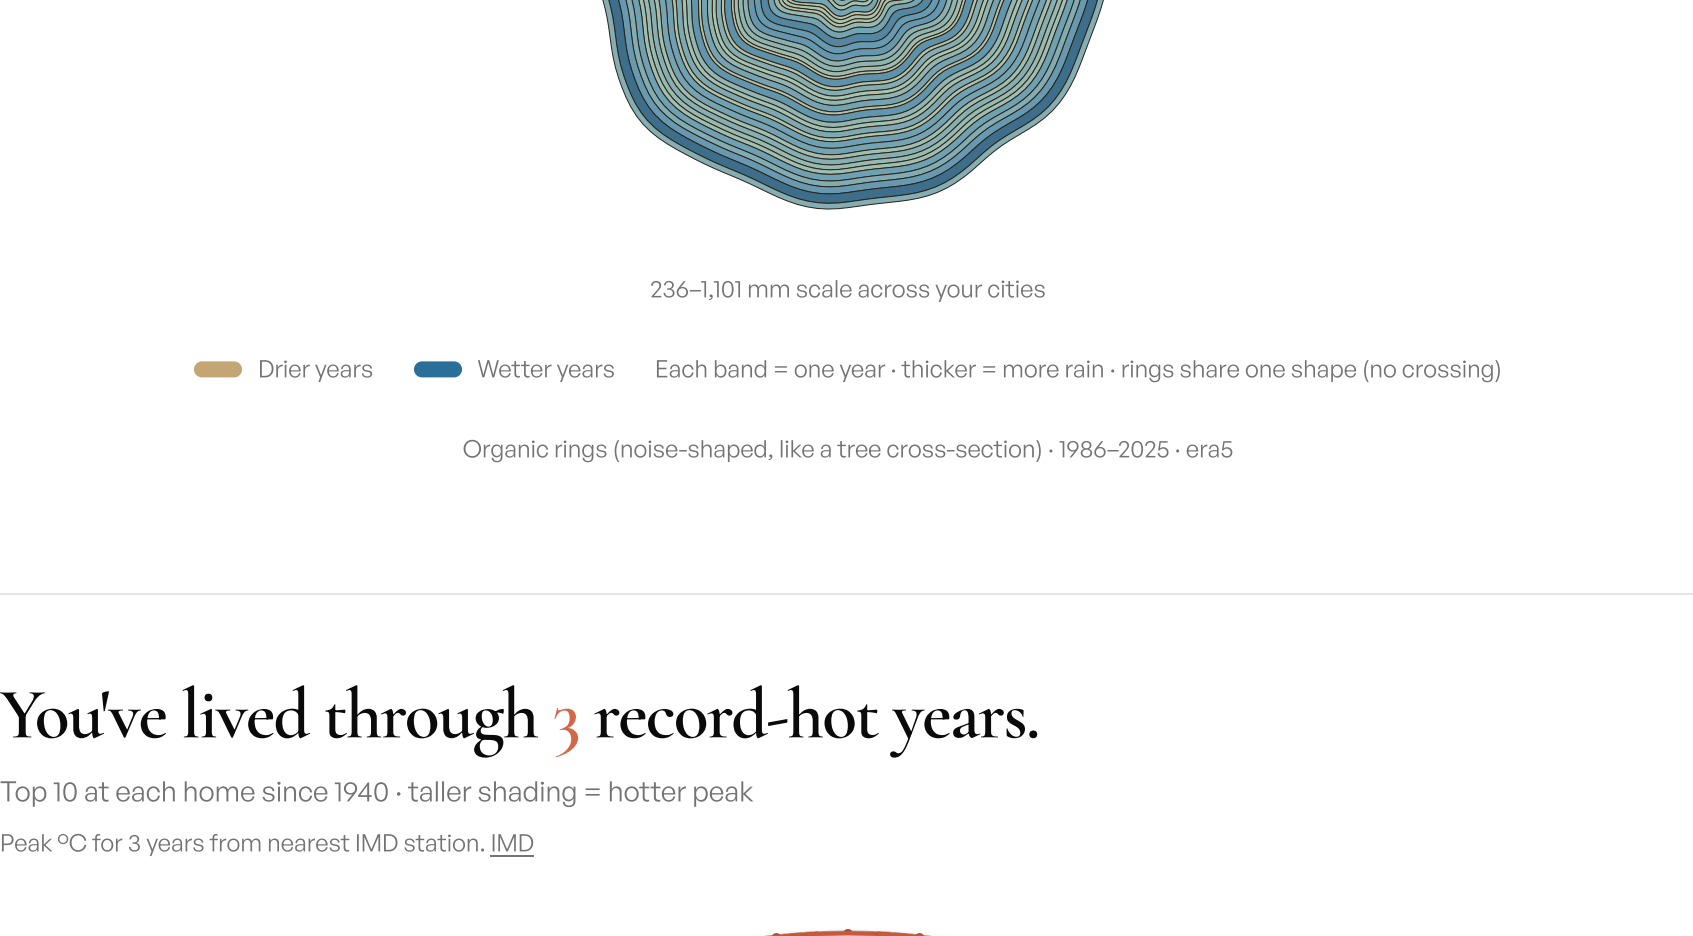

New Delhi now averages about 1.2 days per year with 50mm+ rain — up from 0.4 during 1984–1988. Same calendar, harder hits.

Rainfall memory

Wet and dry years in New Delhi.

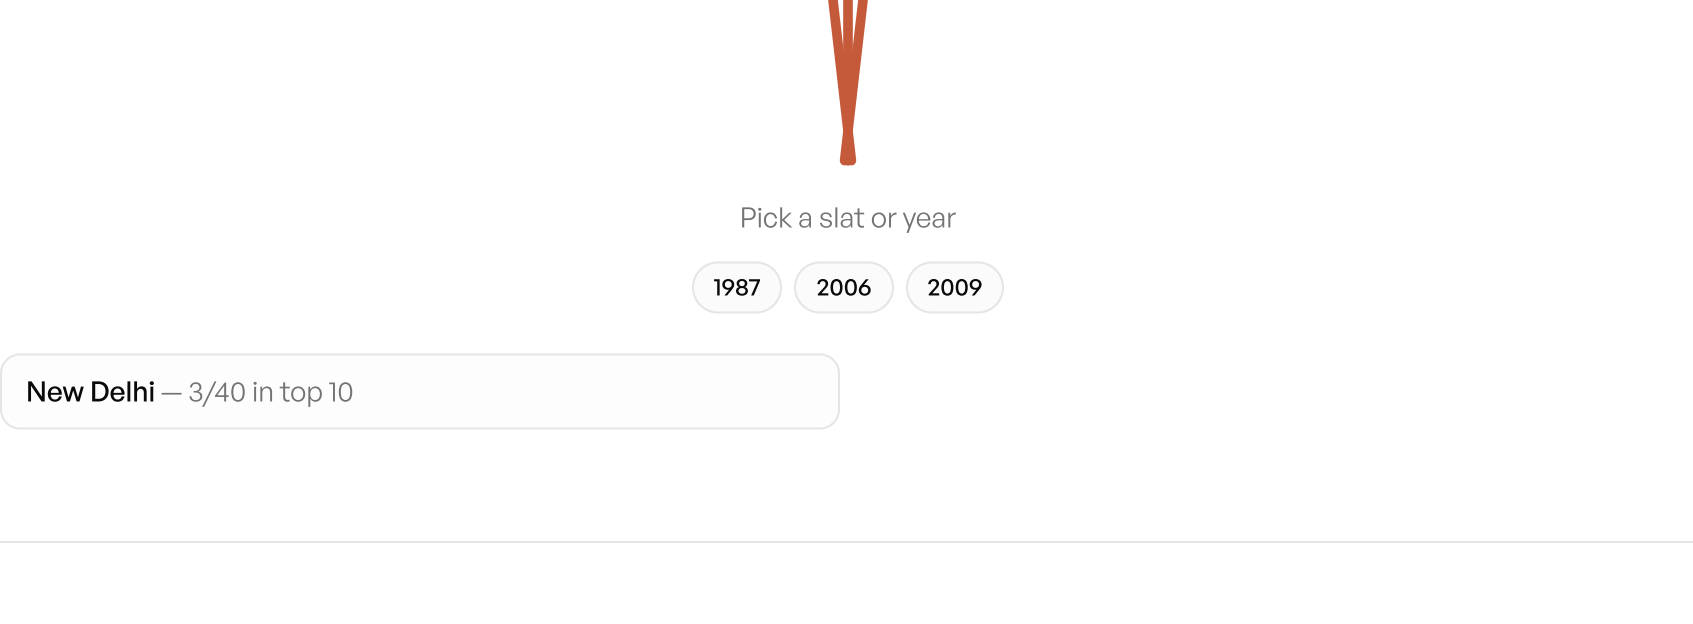

You lived through 40 rainy seasons there since 1986. 50% of those years were wetter than your own median — your soggiest was 2024 (1,101 mm), your driest 1987.

You've lived through 3 record-hot years.

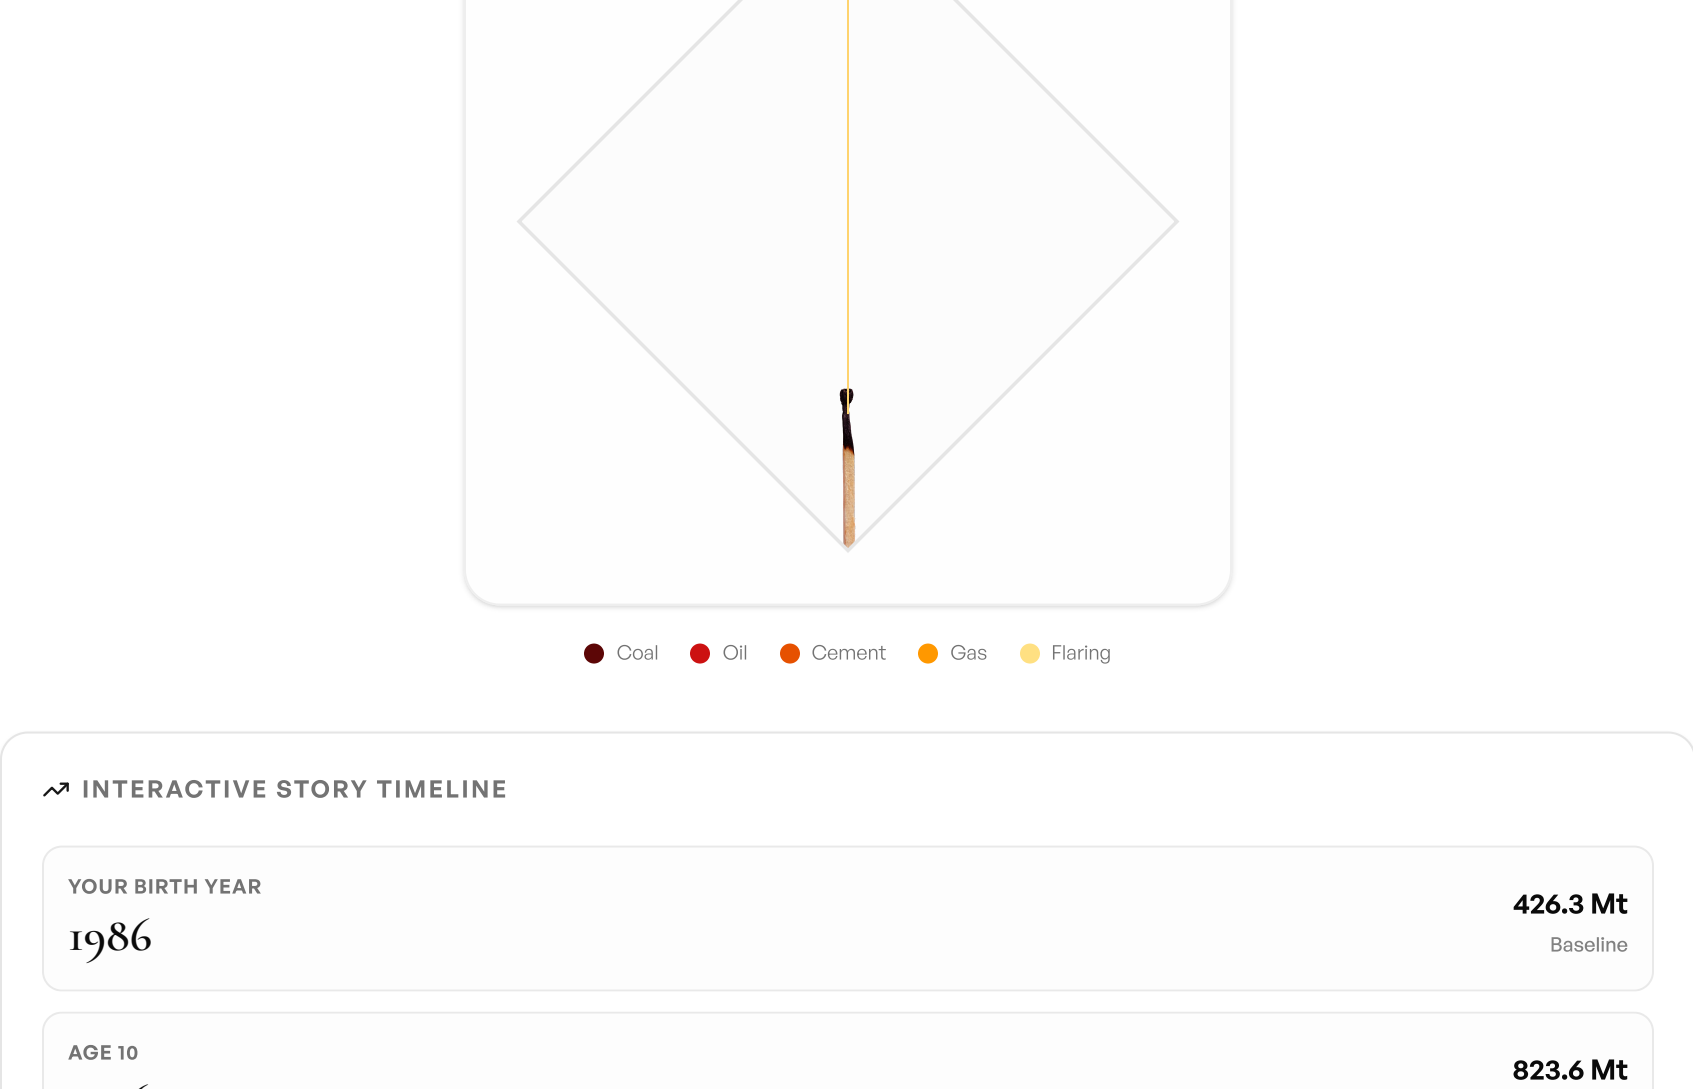

Top 10 at each home since 1940 - taller shading = hotter peak

The Arctic you were born into is gone.

What the numbers mean

Your climate story, interpreted.

Numbers alone don't tell the story. Here's what changed across three generations in New Delhi.

* These remedies are satirical and scientifically non-binding. Your actual carbon footprint requires less theatrical and more structural intervention.
