

How does your childhood compare to the climate of today?

New Delhi got hotter while you grew up.

An average March is now 1.9°C warmer than during 1997–2001.

Your orbit

One line, every home you have known.

Years stitched clockwise from birth. Wettest: 2021 in Bengaluru (Bangalore) (1,441 mm). Driest: 2002 (402 mm).

Rain

Your monsoon rhythm shifted.

June–September rainfall at New Delhi is about 18% wetter now than during 1997–2001.

Rainfall memory

Wet and dry years in New Delhi.

You lived through 23 rainy seasons there since 1999. 48% of those years were wetter than your own median — your soggiest was 2003 (908 mm), your driest 2002.

You've lived through 5 record-hot years.

Top 10 at each home since 1940 · taller shading = hotter peak
Other India peaks use ERA5 grid cells (~25 km) until station history is loaded.

India's carbon emissions across your lifetime

National CO₂ emissions from 1999 to 2024 by fuel and industry source. In your birth year (1999), India emitted 961.2 Mt of CO₂, which has since grown to 3,193.5 Mt today (3.3× higher).

What the numbers mean

Your climate story, interpreted.

Numbers alone don't tell the story. Here's what changed across three generations in New Delhi.

Across 51 years, New Delhi warmed by +0.13°C on average — from your parents' era to today.

As prescribed by your climate pandit

Your upaay.

Every kundli comes with remedies. These have been computed from your personal climate data and endorsed by the relevant deities.

* These remedies are satirical and scientifically non-binding. Your actual carbon footprint requires less theatrical and more structural intervention.
