

How does your childhood compare to the climate of today?

# Raichur bucked the trend.

An average May now runs 1.5°C cooler than during 2014–2018.

Your orbit

## Raichur, year by year.

A line chart wrapped round — each point is one year, distance from centre is how much it rained.

Rain

## Your monsoon rhythm shifted.

June–September rainfall at Raichur is about 38% wetter now than during 2014–2018.

Rainfall memory

## Wet and dry years in Raichur.

You lived through 10 rainy seasons there since 2016. 50% of those years were wetter than your own median — your soggiest was 2024 (1,153 mm), your driest 2018.

## You've lived through 3 record-hot years.

Every kundli comes with remedies. These have been computed from your personal climate data and endorsed by the relevant deities.

**2 VISHWAKARMA** **with guaranteed**

The problem: Your per-capita share of India's CO<sub>2</sub> since you were born: ~17 tonnes.

To offset this, you would need to forgo 2.4M AI queries — or stop using AI entirely for 665 years. This prescription is self-aware. We recommend beginning immediately. The deity of technology has already noted the irony.

**4 ARANYANI** **Ask your elders guaranteed**

The problem: You have survived 3 of the hottest years on record since 1940.

Perform Vriksha Vivah with 1 tree. This classical practice—adapted here for climate dosh—requires formal betrothal to 1 living tree. Budget approximately ₹4,200 for the ceremony. The trees cannot object. They also cannot water themselves. This is now your responsibility.

**5 PITRU DEV** **Generationally certified guaranteed**

The problem: Temperatures rose 0.4°C from your parents' childhood to today.

Fan your parents for 15 minutes daily as generational reparation. Hand-held palm-leaf fan only — electricity would defeat the purpose and insult Pitru Dev. Your parents may protest. This is between you and the ancestors now.
